## CHAPTER 12

---

### Diseases of the respiratory system

This chapter has 79 four-character categories.

Code range starts with CA00

- Exclusions:**
- Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Congenital malformations, deformations and chromosomal abnormalities (Chapter 20)
  - Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Certain conditions originating in the perinatal period (Chapter 19)
  - Certain infectious or parasitic diseases (Chapter 01)
  - Complications of pregnancy, childbirth and the puerperium (Chapter 18)
- Coded Elsewhere:**
- Neoplasms of the respiratory system
  - Developmental respiratory diseases
  - Symptoms, signs or clinical findings of the respiratory system (MD10-MD6Y)
  - Pulmonary heart disease or diseases of pulmonary circulation (BB00-BB0Z)
  - Sleep-related breathing disorders (7A40-7A4Z)
  - Diseases of the respiratory system complicating pregnancy, childbirth or the puerperium (JB64.5)

This chapter contains the following top level blocks:

- Upper respiratory tract disorders
- Certain lower respiratory tract diseases
- Lung infections
- Lung diseases due to external agents
- Respiratory diseases principally affecting the lung interstitium
- Pleural, diaphragm or mediastinal disorders
- Postprocedural disorders of the respiratory system
- Neoplasms of the respiratory system
- Developmental respiratory diseases

## Upper respiratory tract disorders (CA00-CA0Z)

This group of disorders refers to diseases of the upper airways (upper respiratory tract). The upper airways anatomically are complicated structures which extend from the airway openings at the nares and lips to the trachea. The term upper airways includes several anatomically distinct regions. The nose constitutes the upper segment, followed by the nasopharyngeal and oropharyngeal airways, which extend from the nasal choanae and oral cavity to the supraglottic space. The paranasal sinuses drain into the nasal cavities and are attached to the lateral, posterior, and superior aspects of the nose. The larynx divides the upper and lower airways, although some place it in the thoracic inlet.

**Exclusions:** Chronic obstructive pulmonary disease with acute exacerbation, unspecified (CA22.0)

### CA00

#### Acute nasopharyngitis

A disease of the upper respiratory tract, caused by an infection with rhinovirus. This disease is characterised by pharyngitis, runny nose, stuffy nose, or cough. Transmission is by inhalation of infected respiratory secretions, or direct contact.

**Exclusions:** Chronic nasopharyngitis (CA09.1)  
pharyngitis NOS (CA02)  
Acute pharyngitis (CA02)  
Chronic pharyngitis (CA09.2)  
rhinitis NOS (CA09.0)  
sore throat NOS (CA00-CA0Z)  
Vasomotor rhinitis (CA08.3)  
Chronic rhinitis (CA09.0)  
Allergic rhinitis (CA08.0)  
acute sore throat (CA02)  
chronic sore throat (CA09.2)

### CA01

#### Acute sinusitis

Recent onset and/or short duration inflammation of the mucosa in one or more of the paranasal sinuses (maxillary, ethmoid, frontal and sphenoid) arising from infection or other causes such as caries or injury to the teeth. Purulent discharge can be seen at the middle meatus and olfactory cleavage and patients complain of dysosmia, stuffy nose, fever, or localised tenderness or pain. Allergic rhinitis, nasal septum deformity or hypertrophic rhinitis are underlying diseases that may induce acute sinusitis.

**Exclusions:** sinusitis, chronic or NOS (CA0A)

**CA02****Acute pharyngitis**

Acute pharyngitis is defined as an infection or irritation of the pharynx and/or tonsils and is a part of the common cold symptoms. The etiology is usually infectious, with most cases being of viral origin. Although virus infection is the primary cause, it is also caused by bacterial infection. The discomfort of a throat, a throat pain and swallowing pain often occur. Headache, general fatigueness, radiating pain to the ear and a cervical lymphadenitis also occur. Local finding demonstrates hyperaemic palatine tonsils and swelling of lymphoid follicles of posterior wall of pharynx. Patients with acute pharyngitis present most commonly with a sore throat. Other various symptoms can rise in these patients depending on their causing organisms.

**Inclusions:** acute sore throat

**Exclusions:** Acute laryngopharyngitis (CA04)  
Peritonsillar abscess (CA0K.1)  
Chronic pharyngitis (CA09.2)  
Retropharyngeal or parapharyngeal abscess (CA0K.0)

**Coded Elsewhere:** Streptococcal pharyngitis (1B51)  
Meningococcal pharyngitis (1C1C.Y)

**CA02.0****Acute pharyngitis due to other bacteria**

Rapid onset inflammation of the pharynx, (back of the throat, between the tonsils and the voicebox (larynx)) due to a specifically identified organism not classified elsewhere.

**Exclusions:** Viral infections characterised by skin or mucous membrane lesions (1E70-1F0Z)

**Coded Elsewhere:** Gonococcal pharyngitis (1A72.3)

**CA02.1****Acute viral pharyngitis**

**Coded Elsewhere:** Enteroviral vesicular pharyngitis (1F05.1)

**CA02.10****Pharyngitis due to Adenovirus**

Pharyngitis is an inflammation of the mucous membranes and underlying structures of the throat. Adenoviral pharyngitis is a self-limiting disease associated with fever, erythema of the pharynx, enlarged tonsils with exudate and enlarged cervical lymph nodes accompanied by fever, malaise, myalgia and abdominal pain. Frequently occurs with self-limiting conjunctivitis (refer to pharyngoconjunctival fever), laryngotracheitis, bronchitis and pneumonia.

**CA02.1Y**

Other specified acute viral pharyngitis

**CA02.1Z**

Acute viral pharyngitis, unspecified

**CA02.Y**

**Other specified acute pharyngitis**

**CA02.Z**

**Acute pharyngitis, unspecified**

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>CA03</b>   | <b>Acute tonsillitis</b><br><i><b>Exclusions:</b></i> Streptococcal pharyngitis (1B51)<br>Acute pharyngitis (CA02)<br>Peritonsillar abscess (CA0K.1)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>CA03.0</b> | <b>Streptococcal tonsillitis</b><br>A disease of the tonsils, caused by an infection with the gram-positive bacteria <i>Streptococcus pyogenes</i> ( <i>Streptococcus</i> group A). This disease is characterised by a sore throat, fever, tonsillar exudates, or cervical adenopathy. This disease may also present with odynophagia, dysphagia, otalgia, dry tongue, erythematous, enlarged tonsils, or yellowish white spots on the tonsils. Transmission is commonly by inhalation of infected respiratory secretions or indirect contact. Confirmation is by identification of <i>Streptococcus</i> group A from a throat swab. |
| <b>CA03.Y</b> | <b>Other specified acute tonsillitis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>CA03.Z</b> | <b>Acute tonsillitis, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>CA04</b>   | <b>Acute laryngopharyngitis</b><br>The most common upper respiratory tract infection is the common cold however, infections of laryngopharynx is also considered upper respiratory tract infections, of multiple sites.                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>CA05</b>   | <b>Acute laryngitis or tracheitis</b><br>Acute laryngitis and tracheitis are defined respectively as acute inflammation of larynx and trachea, with local findings of erythema, and oedema of laryngeal and tracheal mucosa. Acute laryngitis and tracheitis are induced by upper respiratory tract viral infections or voice abuse.<br><i><b>Exclusions:</b></i> Laryngismus (stridulus) (CA0H.4)<br>Acute obstructive laryngitis or epiglottitis (CA06)                                                                                                                                                                            |

| <b>CA06.0</b>       | <b>Acute obstructive laryngitis</b><br>A condition commonly caused by an acute viral infection of the upper airway. This condition is characterised by a barking cough, stridor, hoarseness, or difficulty breathing. Transmission is commonly by inhalation of infected respiratory secretions.<br><i>Inclusions:</i> croup                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>CA06.1</b>       | <b>Acute epiglottitis</b><br>Acute epiglottitis is a special type of laryngeal inflammation, being characterised with a local swelling of epiglottis mucosa. Haemophilus influenzae type B infection is considered an important causative factor. Particularly in children, rapid exacerbation of dyspnoea can occur a couple of hours after the onset of this disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>CA08</b>         | <b>Vasomotor or allergic rhinitis</b><br>Rhinitis is inflammation of the nasal mucosa clinically characterised by major symptoms: sneezing, nasal pruritus, running nose, and stuffy nose.<br>Allergic rhinitis is an inflammation of nasal airway triggered by allergens to which the affected individual has previously been sensitized. Pathogenesis of allergic rhinitis is type I allergy on the nasal mucosa. Antigens inhaled into sensitized nasal mucosa bind to IgE antibodies on mast cells, which release chemical mediators such as histamine and peptide leukotriene. Consequently terminal of sensory neurons and vessels react to induce sneezing, running nose, and stuffy nose (immediate phase reaction). In late phase reaction, various chemical mediators are produced by mast cells, cytokines are produced by Th2 and mast cells, and chemokines are produced by epithelial cells, endothelium of blood vessels, and fibrocytes, respectively. These cell-derived transmitters actually induce various cell types of inflammatory cell infiltration to nasal mucosa. Among them, activated eosinophils is the main player of mucosal swelling and hyperreactivity.<br>Non-allergic rhinitis is an inflammation of nasal mucosa in which allergic mechanisms are not involved. It covers many different phenotypes.<br><i>Exclusions:</i> rhinitis NOS (CA09.0) |

| <b>CA08.0</b>  | <b>Allergic rhinitis</b><br>Allergic rhinitis is an inflammation of nasal airway triggered by allergens to which the affected individual has previously been sensitized. Pathogenesis of allergic rhinitis is type I allergy on the nasal mucosa. Antigens inhaled into sensitized nasal mucosa bind to IgE antibodies on mast cells, which release chemical mediators such as histamine and peptide leukotriene. Consequently terminal of sensory neurons and vessels react to induce sneezing, running nose, and stuffy nose (immediate phase reaction). In late phase reaction, various chemical mediators are produced by mast cells, cytokines are produced by Th2 and mast cells, and chemokines are produced by epithelial cells, endothelium of blood vessels, and fibrocytes, respectively. These cell-derived transmitters actually induce various cell types of inflammatory cell infiltration to nasal mucosa. Among them, activated eosinophils is the main player of mucosal swelling and hyperreactivity. |
| <b>CA08.00</b> | Allergic rhinitis due to pollen<br>This condition is an allergic inflammation of the nasal airways. It occurs when an allergen, such as pollen, is inhaled by an individual with a sensitized immune system.<br><b>Inclusions:</b> Pollinosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>CA08.01</b> | Allergic rhinitis due to other seasonal allergens<br>This refers to other allergic inflammation of the nasal airways in patients with proven allergy to other allergens besides pollens and house dust mite, with multiple sensitization or as a component of complex conditions such as latex allergy. Clinically characterised by major symptoms: sneezing, nasal pruritus, running nose, and stuffy nose. It occurs when an allergen, such as animal dander (particles of shed skin and hair), insect (cockroach body particles), fungal particles, is inhaled by an individual with a sensitized immune system.                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>CA08.02</b> | Allergic rhinitis due to house dust mite<br>Allergic rhinitis triggered by the exposure to house dust mite allergens to which the affected individual has previously been sensitized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>CA08.03</b> | Other allergic rhinitis<br>This refers to other allergic inflammation of the nasal airways. It occurs when an allergen, such as pollen, dust or animal dander (particles of shed skin and hair) is inhaled by an individual with a sensitized immune system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>CA09</b>    | <p><b>Chronic rhinitis, nasopharyngitis or pharyngitis</b></p> <p>The pathological condition of chronic rhinitis is a continuation of persistent inflammation on nasal turbinate mucosae, which is induced by microbial infection, irritation with inhaled substances and abnormal structure of nasal cavity. This condition induces nasal obstruction and increased nasal discharge. Pharyngitis is an inflammation of whole pharyngeal mucosa and lymphatic tissues and its acute symptoms are a part of the common cold symptoms. Although viral infection is the primary cause, it is also caused by bacterial infections. The discomfort of throat, throat pain and swallowing pain occur. Headache, general fatigueness, radiating pain to the ear and a cervical lymphadenitis also occur. Local finding demonstrates hyperaemic palatine tonsils and swelling of lymphoid follicles of posterior wall of pharynx. Chronic pharyngitis can be considered as a consequence of acute pharyngitis or effect of continuous stimuli, with symptoms of abnormal sensation of throat, discomfort, and foreign body sensation.</p> |

| <b>CA0A</b>   | <b>Chronic rhinosinusitis</b><br>Sinusitis is an inflammation of the mucosal lining of the paranasal sinuses secondary to both infectious and allergic mechanisms. The retention of sinus secretions is the most important event in the development of sinusitis. This creates a favourable milieu for the growth of infection agents and may be caused by the obstruction or narrowing of sinus ostia, mucociliary dysfunction and changes in mucus composition. 90% of sinus infections involve the maxillary sinus. Chronic sinusitis refers to symptom duration lasting 3 months or more. Diagnosis of sinusitis is based on past history and physical examination findings. The CT scan is the most sensitive technique in evaluating sinus disease. The goals of management of chronic sinusitis are to eradicate infection, to relieve ostiomeatal obstruction, to normalize mucociliary clearance, and to prevent complications. When pharmaceutical treatment does not have any remarkable improvement or when a surgical approach can be chosen as patient's complication, surgical intervention should be aimed to establish an effective sinus drainage from the ostium. Functional endoscopic sinus surgery (FESS) describes endoscopic techniques that have revolutionized the approach to sinus disease. The procedure is aimed at restoring the functional physiology of sinus aeration and drainage via the expanded ostiomeatal complex while minimizing surgical alteration of the normal anatomic pathways.<br><i><b>Exclusions:</b></i> Acute sinusitis (CA01) |
| <b>CA0A.0</b> | <b>Samter syndrome</b><br>Samter syndrome is composed of asthma, aspirin intolerance, nasal polyps and chronic rhinosinusitis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>CA0C</b>   | <b>Cyst or mucocele of nose or nasal sinus</b><br>A condition which refers to diseases of the nose and nasal sinus that cause a cyst or mucocele.<br><br>A mucocele is any dilatation (typically pathologic) with accumulation of mucus. Mucoceles are benign, epithelium-lined cysts filled with mucus, which can form in the paranasal sinuses. These structures may cause symptoms if sufficiently large or if exerting pressure on surrounding anatomic structures. Symptomatic mucoceles typically require surgical intervention. Mucoceles should be differentiated from sinus retention cysts. Unlike mucoceles, sinus retention cysts do not result in expansion and thinning of the bony sinus walls. |

| <b>CA0H.2</b> | <b>Nodules of vocal cords</b><br>#DRAFT# This is a mass of tissue that grows on the vocal folds (vocal cords). Typically, this mass will appear on the junction of the anterior 1/3 and posterior 2/3 of the vocal fold, where contact is most forceful.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>CA0H.3</b> | <b>Oedema of larynx</b><br>Laryngeal oedema is oedema (accumulation of fluid) which may occur for example in aryepiglottic folds, epiglottis, the arytenoid region or submucosal of the subglottic region. It may occur due to anaphylaxis, angioneurotic oedema, larynx infection, foreign body or substance, or injury.<br><i><b>Exclusions:</b></i> oedematous laryngitis (CA05.0)<br>laryngitis: acute obstructive [croup] (CA06.0)                                                                                                                                                                                                                                                                                     |
| <b>CA0H.4</b> | <b>Laryngeal spasm</b><br>Laryngeal spasm is a pathological condition that is mainly a spasmodic closure (spasm) of the inlet portion of the larynx or the glottic region. There is an adult-onset and childhood (infant)-onset generally in this disease. There is a difference in the pattern of expression for these two types. In the infant, respiratory arrest is associated with this condition and spasmodic closure of the glottis occurs suddenly, and then breathing returns to original quite rapidly within a few minutes. In adults, the main symptoms of this condition are difficulty breathing or inspiratory stridor rather than a complete respiratory arrest.<br><i><b>Inclusions:</b></i> laryngospasm |
| <b>CA0H.5</b> | <b>Stenosis of larynx</b><br>Laryngeal stenosis is an abnormal narrowing within the cavity of the larynx.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>CA0H.Y</b> | <b>Other specified diseases of vocal cords or larynx, not elsewhere classified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>CA0J.0</b> | <b>Polypoid sinus degeneration</b><br>Also referred to as Woakes' syndrome or ethmoiditis. Woakes' syndrome is characterised by severe recurrent nasal polyps, often without eosinophils on histological examination and with broadening of the nose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>CA0K</b>   | <b>Abscess of upper respiratory tract</b><br>Abscess of upper respiratory tract is defined as abscess formation which occurs from nose to pharynx and larynx. Abscess, furuncle and carbuncle of nose, retropharyngeal, parapharyngeal abscess and other abscess of pharynx are included in this classification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>CA0K.0</b> | <b>Retropharyngeal or parapharyngeal abscess</b><br>A retropharyngeal abscess is an abscess located in the tissues in the back of the throat behind the posterior pharyngeal wall (the retropharyngeal space). A parapharyngeal abscess is an abscess developing in the potential space in the head and the neck.<br><br><b>Exclusions:</b> Peritonsillar abscess (CA0K.1)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>CA0K.1</b> | <b>Peritonsillar abscess</b><br>Peritonsillar abscess is defined with abscess formation between the tonsillar capsule and the tonsillar constrictor muscles. Peritonsillar abscess mostly comes from peritonsillitis. Fever rise, pharyngeal pain and swallowing pain are the main symptoms, but, it also causes a muffled voice. Uvula is deviated to the unaffected side and swelling and redness around the affected tonsil is remarkable. Bacterial examination from the peritonsillar pus often reveal streptococcus group A beta-haemolytic as the aerobic bacteria and the detection rate of anaerobic bacteria also amounted to more than half. The treatment consists of antimicrobial therapy and incision and drainage of the abscess. The symptoms improve with above treatment in the most cases, while in some cases the abscess proceeds to a deadly deep neck infection and mediastinal abscess. If there are systemic complications such as diabetes mellitus, special attention is required.<br><br><b>Inclusions:</b> Quinsy<br><b>Exclusions:</b> Acute tonsillitis (CA03)<br>Chronic tonsillitis (CA0F)<br>tonsillitis, NOS (CA03)<br>retropharyngeal abscess (CA0K.0) |
| <b>CA0K.Y</b> | <b>Other specified abscess of upper respiratory tract</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>CA0Z</b>   | <b>Upper respiratory tract disorders, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Certain lower respiratory tract diseases (CA20-CA2Z)

This group refers to diseases of airways that forms the connection between the outside world and the terminal respiratory unit. Intrapulmonary airways are divided into three major groups; bronchi, membranous bronchiole, and respiratory bronchiole/gas exchange ducts.

**Coded Elsewhere:** Acute tracheitis (CA05.1)

Whooping cough (1C12)

Chronic respiratory disease originating in the perinatal period (KB29)

### CA20

#### Bronchitis

Bronchitis is inflammation of the main air passages to the lungs.

**Coding Note:** Excludes acute infectious bronchitis

**Exclusions:** bronchitis, asthmatic NOS (CA23.3)

bronchitis, chemical (acute) (CA81)

**Coded Elsewhere:** Acute bronchitis (CA42)

**CA20.0** Acute noninfectious bronchitis

**CA20.1** Chronic bronchitis

#DRAFT# This is unspecified chronic inflammation of the bronchi (medium-size airways) in the lungs, causing a persistent cough that produces sputum (phlegm) and mucus, for at least three months per year in two consecutive years.

**Exclusions:** chronic asthmatic bronchitis (CA22.1)

chronic: bronchitis: with airways obstruction (CA22)

chronic: emphysematous bronchitis (CA22.1)

chronic: obstructive pulmonary disease NOS (CA22)

**CA20.10** Simple chronic bronchitis

#DRAFT# This is a chronic inflammation of the bronchi (medium-size airways) in the lungs, causing a persistent cough that produces sputum (phlegm) and mucus, for at least three months per year in two consecutive years.

**CA20.11** Mucopurulent chronic bronchitis

#DRAFT# This is a mucopurulent, chronic inflammation of the bronchi (medium-size airways) in the lungs, causing a persistent cough that produces sputum (phlegm) and mucus, for at least three months per year in two consecutive years.

**CA20.12** Mixed simple and mucopurulent chronic bronchitis

#DRAFT# This is a mix of simple and mucopurulent, chronic inflammation of the bronchi (medium-size airways) in the lungs, causing a persistent cough that produces sputum (phlegm) and mucus, for at least three months per year in two consecutive years.

**CA20.13** Protracted bacterial bronchitis

Protracted bacterial bronchitis (PBB) is a disease caused by the chronic infection of the conducting airways. The condition causes a persistent wet cough lasting more than four weeks that responds to antibiotic treatment.

## **CA21**

### **Emphysema**

Emphysema is defined by abnormal and permanent enlargement of the airspaces that are distal to the terminal bronchioles. This is accompanied by destruction of the airspace walls, without obvious fibrosis (i.e. there is no fibrosis visible to the naked eye). Emphysema can exist in individuals who do not have airflow obstruction; however, it is more common among patients who have moderate or severe airflow obstruction.

**Exclusions:**

- Compensatory emphysema (CB40.4)
- Interstitial emphysema originating in the perinatal period (KB27.0)
- emphysema due to inhalation of chemicals, gases, fumes or vapours (CA81)
- emphysema mediastinal (CB40.3)
- Traumatic subcutaneous emphysema, not elsewhere classified (NF0A.7)
- emphysema, surgical (subcutaneous) (NE81)
- emphysema with chronic (obstructive) bronchitis (CA22)
- emphysematous (obstructive) bronchitis (CA22.1)

| <b>CA21.Z</b> | <b>Emphysema, unspecified</b>                                                                                                                                                                                                                                                                             |

**CA22****Chronic obstructive pulmonary disease**

Chronic Obstructive Pulmonary disease (COPD), a common preventable and treatable disease, is characterised by persistent airflow limitation that is usually progressive and associated with an enhanced chronic inflammatory response in the airways and the lung to noxious particles or gases. Exacerbations and comorbidities contribute to the overall severity in individual patients.

**Exclusions:**

- Emphysema (CA21)
- chronic tracheobronchitis (CA20.1)
- chronic tracheitis (CA20.1)
- Simple or mucopurulent chronic bronchitis (CA20.1)
- asthmatic bronchitis NOS (CA23.3)
- Bronchiectasis (CA24)
- Asthma (CA23)
- chronic bronchitis NOS (CA20.1)

**CA22.0****Chronic obstructive pulmonary disease with acute exacerbation, unspecified**

An exacerbation of COPD is an acute event characterised by a worsening of the patient's respiratory symptoms that is beyond normal day-to-day variations and leads to a change in medication. Exacerbations of COPD can be precipitated by several factors. The most common causes appear to be viral upper respiratory tract infections and infection of the tracheobronchial tree. The diagnosis of an exacerbation relies exclusively on the clinical presentation of the patient complaining of an acute change of symptoms (baseline dyspnoea, cough, and/or sputum production) that is beyond normal day-to-day variation.

**CA22.1****Certain specified chronic obstructive pulmonary disease**

**Coding Note:** Use additional code to identify any associated respiratory tract infection.

**Exclusions:**

- Chronic obstructive pulmonary disease with acute exacerbation, unspecified (CA22.0)

**CA22.Z****Chronic obstructive pulmonary disease, unspecified****CA23****Asthma**

Asthma is a chronic inflammatory disorder of the airways in which many cells and cellular elements play a role. It is characterised by an increased responsiveness of the trachea and bronchi to various stimuli and manifested by a widespread narrowing of the airways that change in severity either spontaneously or as a result of therapy. This leads to recurrent episodes of wheezing, breathlessness, chest tightness, and coughing, particularly at night or in the early morning.

**Inclusions:**

- Idiosyncratic asthma

**Exclusions:**

- wood asthma (CA70)
- asthma with chronic obstructive pulmonary disease (CA22)
- miner's asthma (CA60.1)
- Wheezing (MD11.C)
- chronic obstructive asthma (CA22)
- chronic asthmatic (obstructive) bronchitis (CA22.1)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>CA23.0</b>  | <b>Allergic asthma</b><br>Allergic asthma is the most easily recognised asthma phenotype, which often commences in childhood and is associated with a past and/or family history of allergic diseases such as eczema, allergic rhinitis, or food or drug allergy. Examination of the induced sputum of these patients before treatment often reveals eosinophilic airway inflammation. The main trigger is the exposure to inhaled allergens, such as dust mite and pollens, to which the affected individual has previously been sensitized. Patients with this asthma phenotype usually respond well to inhaled corticosteroid (ICS) treatment and specific allergen-immunotherapy.                                                                                                                                                                                                                         |
| <b>CA23.00</b> | Allergic asthma with exacerbation<br>This refers to acute or subacute episodes of progressively worsening shortness of breath, cough, wheezing, and chest tightness, or some combination of these symptoms in patients with proven allergic asthma. Allergic asthma can be exacerbated by allergens to which the individual is allergic, other exogenous factors such as respiratory infections, pollutants or climate change, or endogenous co-factors. Exacerbations are characterised by decreases in expiratory airflow that can be documented and quantified by simple measurement of lung function (spirometry or PEF), can vary widely among individuals and within individuals from rare to frequent. The severity of exacerbation of allergic asthma can vary from mild to very severe and life-threatening, but in general respond to standard treatments of bronchodilators (inhalers) and steroid |
| <b>CA23.01</b> | Allergic asthma with status asthmaticus                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>CA23.02</b> | Allergic asthma, uncomplicated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>CA23.1</b>  | <b>Non-allergic asthma</b><br>Non-allergic asthma occurs in some patients who have asthma that is not associated with allergy. The cellular profile of the sputum of these patients may be neutrophilic, eosinophilic or contain only a few inflammatory cells (paucigranulocytic). Patients with non-allergic asthma often respond less well to inhaled corticosteroids. It can cover different phenotypes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>CA23.10</b> | Non-allergic asthma with exacerbation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>CA24</b>    | <p><b>Bronchiectasis</b></p> <p>Bronchiectasis is an abnormal widening of one or more airways. Normally, tiny glands in the lining of the airways make a small amount of mucus. Mucus keeps the airways moist and traps any dust and dirt in the inhaled air. Because bronchiectasis creates an abnormal widening of the airways, extra mucus tends to form and pool in parts of the widened airways. Widened airways with extra mucus are prone to infection.</p> <p><b>Exclusions:</b>           tuberculous bronchiectasis, confirmed (1B10.0)</p> <p>                                  Respiratory tuberculosis, not confirmed (1B10.1)</p> |

**CA25****Cystic fibrosis**

Cystic fibrosis (CF) is a genetic disorder characterised by the production of sweat with a high salt content and mucus secretions with an abnormal viscosity. The disease is chronic and generally progressive, with onset usually occurring during early childhood or, occasionally, at birth (meconium ileus). Virtually any internal organ may be involved but the principle manifestations concern the breathing apparatus (chronic bronchitis), pancreas (pancreatic insufficiency, adolescent diabetes and occasionally pancreatitis) and, more rarely, the intestine (stercoral obstruction) or liver (cirrhosis). The usual presenting symptoms and signs include persistent pulmonary infection, pancreatic insufficiency, and elevated sweat chloride levels. However, many patients demonstrate mild or atypical symptoms, and clinicians should remain alert to the possibility of CF even when only a few of the usual features are present. Both criteria; clinical symptoms consistent with CF in at least one organ system and evidence of cystic fibrosis transmembrane conductance regulator (CFTR) dysfunction must be met to diagnose cystic fibrosis.

**Inclusions:** mucoviscidosis

**CA25.0****Classical cystic fibrosis**

#DRAFT# This is an autosomal recessive genetic disorder that affects most critically the lungs, and also the pancreas, liver, and intestine. It is characterised by abnormal transport of chloride and sodium across an epithelium, leading to thick, viscous secretions.

**Coded Elsewhere:** Exocrine pancreatic manifestations of classical cystic fibrosis (DC30.Y)

Endocrine pancreatic manifestations of classical cystic fibrosis (DC30.Y)

**CA25.1****Atypical cystic fibrosis**

#DRAFT# This is an atypical autosomal recessive genetic disorder that affects most critically the lungs, and also the pancreas, liver, and intestine. It is characterised by abnormal transport of chloride and sodium across an epithelium, leading to thick, viscous secretions.

**Coded Elsewhere:** Endocrine pancreatic manifestations of atypical cystic fibrosis (DC30.Y)

**CA25.2****Subclinical cystic fibrosis**

**Coding Note:** Cystic fibrosis with no clinical manifestations is coded here.

**Inclusions:** Asymptomatic cystic fibrosis

**CA25.Z****Cystic fibrosis, unspecified****CA26****Chronic bronchiolitis**

Bronchiolitis and bronchiolitis obliterans are general terms used to describe a nonspecific inflammatory injury that primarily affects the small airways and generally spares the interstitium. Bronchiolitis may be caused by inhalation injury, infection, or drugs; associated with organ transplantation or connective tissue disease; or may be idiopathic. The main pathologic categories of bronchiolitis are: constrictive, proliferative, follicular, airway-centred interstitial fibrosis, and diffuse panbronchiolitis. The constrictive and proliferative patterns may occur together.

|               | Bronchiolitis obliterans is commonly used to describe a number of unrelated conditions whose common end point is functional obstruction of bronchioles. A typical form is constrictive bronchiolitis. Constrictive bronchiolitis is an uncommon histologic finding characterised by alterations in the walls of membranous and respiratory bronchioles, often without extensive changes in alveolar ducts and alveolar walls. These changes lead to concentric narrowing or complete obliteration of the airway lumen. The clinical manifestations of constrictive bronchiolitis usually include progressive airflow obstruction, sometimes in the presence of a relatively normal chest radiograph. The clinical severity depends upon the type, extent, and severity of the initial lung injury. |

|               | Diffuse panbronchiolitis (DPB) is an idiopathic inflammatory disease principally affecting the respiratory bronchioles, causing a progressive suppurative and severe obstructive respiratory disorder. Onset occurs in the second to fifth decade of life and manifests by chronic cough, exertional dyspnoea, and sputum production. Most patients also have chronic paranasal sinusitis. If left untreated, DPB progresses to bronchiectasis, respiratory failure and death. A significant improvement in the prognosis has been reported thanks to the use of long-term therapy with macrolide antibiotics, the effect of which is attributed to an anti-inflammatory and immunoregulatory action.                                                                                              |

|               | Tracheobronchopathia osteochondroplastica is a rare disorder of unknown cause, seen with a frequency of 0.4 percent at bronchoscopy, affecting the large airways. It is characterised by the development of multiple osseous and cartilaginous submucosal nodules connected to tracheal cartilage. The abnormality spares the posterior tracheal membranous wall. In spite of marked radiographic changes, patients are only rarely symptomatic since severe airway obstruction is unusual. Linear tracheoplasty may be required in patients with symptomatic airway obstruction.                                                                                                                                                                                                                  |

**CA2Z****Lower respiratory tract disease, unspecified****Lung infections (CA40-CA4Z)**

Any condition of the lungs, caused by an infection with a bacterial, viral, fungal, or parasitic source.

**Coded Elsewhere:** Influenza (1E30-1E32)

Pulmonary histoplasmosis capsulati (1F2A.0)

Chronic obstructive pulmonary disease with acute lower respiratory infection (CA22.1)

Influenza with pneumonia, seasonal influenza virus identified (1E30)

**CA40****Pneumonia**

A disease of the lungs, frequently but not always caused by an infection with bacteria, virus, fungus, or parasite. This disease is characterised by fever, chills, cough with sputum production, chest pain and shortness of breath. Confirmation is by chest x-ray.

**Inclusions:** infectious pneumonia

**Exclusions:** Pneumonitis (CA70-CA7Z)

**Coded Elsewhere:** Pulmonary toxoplasmosis due to *Toxoplasma gondii* (1F57.2)

Severe acute respiratory syndrome (1D65)

Congenital pneumonia (KB24)

Abscess of lung with pneumonia (CA43.1)

**CA40.0****Bacterial pneumonia**

A disease of the pulmonary system, caused by an infection with a bacterial source. This disease is characterised by fever, lethargy, headache, myalgia, vomiting, or coughing. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the bacterial source in a sputum sample.

**Coding Note:** Code also the causing condition

**Inclusions:** bronchopneumonia due to bacteria other than *S. pneumoniae* and *H. influenzae*

**Exclusions:** Congenital pneumonia (KB24)  
Legionellosis (1C19)

**Coded Elsewhere:** Pulmonary actinomycosis (1C10.0)

Pulmonary nocardiosis (1C1B.0)

Legionnaires disease (1C19.1)

Pneumonia in Q fever (1C33)

Pulmonary anthrax (1B97)

- CA40.00**      Pneumonia due to *Chlamydia pneumoniae*  
 A disease of the pulmonary system, caused by an infection with the gram-negative bacteria *Chlamydia pneumoniae*. This disease commonly presents with a gradual onset of cough with low-grade fever. This disease may also present with pharyngitis, laryngitis, and sinusitis. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of *Chlamydia pneumoniae* in a sputum sample.  
**Coded Elsewhere:** Congenital pneumonia due to *Chlamydia* (KB24)
- CA40.01**      Pneumonia due to *Escherichia coli*  
 A disease of the pulmonary system, caused by an infection with the gram-negative bacteria *Escherichia coli*. This disease is characterised by fever, cough, and dyspnoea. Transmission is commonly by inhalation of infected respiratory secretions. Confirmation is by identification of *Escherichia coli* in blood, sputum, or pleural fluid samples.  
**Coded Elsewhere:** Congenital pneumonia due to *Escherichia coli* (KB24)
- CA40.02**      Pneumonia due to *Haemophilus influenzae*  
 A disease of the pulmonary system, caused by an infection with the gram-negative bacteria *Haemophilus influenzae*. This disease is characterised by cough, shortness of breath, fever, chills, muscle aches, and chest pain. Transmission is by inhalation of infected respiratory secretions or direct contact. Confirmation is by identification of *Haemophilus influenzae* in blood or other typically sterile body fluid.  
**Inclusions:**              Bronchopneumonia due to *H. influenzae*  
**Exclusions:**              Congenital pneumonia (KB24)
- CA40.03**      Pneumonia due to *Klebsiella pneumoniae*  
 A disease of the pulmonary system, caused by an infection with the gram-negative bacteria *Klebsiella pneumoniae*. This infection common presents with thick, haemorrhagic, mucoid sputum. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of *Klebsiella pneumoniae* in a sputum sample.
- CA40.04**      Pneumonia due to *Mycoplasma pneumoniae*  
 A disease of the pulmonary system, caused by an infection with *Mycoplasma pneumoniae*. This infection commonly presents with a non-productive cough, chest pain, or fever. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of *Mycoplasma pneumoniae* in a sputum sample.
- CA40.05**      Pneumonia due to *Pseudomonas aeruginosa*  
 A disease of the pulmonary system, caused by an infection with the gram-negative bacteria *Pseudomonas aeruginosa*. This disease is characterised by fever, cough, and dyspnoea.  
**Coded Elsewhere:** Congenital pneumonia due to *Pseudomonas aeruginosa* (KB24)

| <b>CA40.1</b>  | <p><b>Viral pneumonia</b></p> <p>A disease of the pulmonary system, caused by an infection with a viral source. This disease is characterised by fever, lethargy, headache, myalgia, vomiting, or coughing. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the viral source in a sputum sample.</p> <p><b>Coding Note:</b> Code also the causing condition</p> <p><b>Inclusions:</b> bronchopneumonia due to viruses other than influenza viruses</p> <p><b>Exclusions:</b> aspiration pneumonia (CA71.0)<br/>Influenza with pneumonia, virus not identified (1E32)<br/>Severe acute respiratory syndrome (1D65)<br/>lipid pneumonia (CA71.1)<br/>Idiopathic interstitial pneumonitis (CB03)<br/>Aspiration pneumonitis due to anaesthesia during labour or delivery (JB0C.0)<br/>Pulmonary complications of anaesthesia during pregnancy (JA67.0)<br/>Congenital pneumonia (KB24)<br/>Pneumonitis due to solids and liquids (CA71)<br/>Pulmonary complications of anaesthesia during the puerperium (JB43.0)</p> |
| <b>CA40.10</b> | <p><b>Pneumonia due to Adenovirus</b></p> <p>A disease of the pulmonary system, caused by an infection with adenovirus. This disease is characterised by fever, chills, or rigors. This disease may also present with chest pain, productive cough, dyspnoea, tachypnoea, hypoxia, and tachycardia. Transmission is by droplet transmission. Confirmation is by identification of adenovirus in a sputum sample.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>CA40.11</b> | <p><b>Pneumonia due to Respiratory syncytial virus</b></p> <p>A disease caused by an infection with respiratory syncytial virus. This disease is characterised by an inflammatory condition of the lung commonly affecting the alveoli (pneumonia), leading to coughing, sneezing, fever, or wheezing. This disease may be severe in premature babies and those with concurrent disease or immunosuppression. Transmission is by direct contact, droplet transmission, or indirect contact with infected respiratory secretions. Confirmation is by identification of respiratory syncytial virus, commonly through antigen detection or cell culture.</p>                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>CA40.12</b> | <p><b>Pneumonia due to parainfluenza virus</b></p> <p>A disease of the pulmonary system, caused by an infection with parainfluenza virus. This disease is characterised by fever, malaise, cough, or tachypnoea. Transmission is by inhalation of infected respiratory secretions, direct contact, or through fomites. Confirmation is by identification of the parainfluenza virus in respiratory secretions, detection of a significant rise in parainfluenza specific IgG antibodies in paired serum, or detection of parainfluenza specific IgM antibodies in a single serum sample.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>CA42.3</b> | <b>Acute bronchitis due to Parainfluenza virus</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|               | A disease of the bronchi, caused by an acute infection with parainfluenza virus. This disease is characterised by acute inflammation of the bronchi leading to cough, sputum production, wheezing, or shortness of breath. Transmission is by inhalation of infected respiratory secretions, direct contact, or through fomites. Confirmation is by identification of the parainfluenza virus in respiratory secretions, detection of a significant rise in parainfluenza specific IgG antibodies in paired serum, or detection of parainfluenza specific IgM antibodies in a single serum sample. |
| <b>CA42.4</b> | <b>Acute bronchitis due to Haemophilus influenzae</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|               | A disease of the bronchi, caused by an infection with the gram-negative bacteria Haemophilus influenzae. This disease is characterised by acute inflammation of the bronchi leading to cough, sputum production, wheezing or shortness of breath. Transmission is by inhalation of infected respiratory secretions, or direct contact. Confirmation is by identification of Haemophilus influenzae in blood or other typically sterile body fluid.                                                                                                                                                 |
| <b>CA42.5</b> | <b>Acute bronchitis due to Coxsackievirus</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|               | A disease of the pulmonary system, caused by an infection with Coxsackie virus. This disease is characterised by cough, fever, or tachypnoea. Transmission is by the faecal-oral route, or vertical transmission. Confirmation is by identification of coxsackievirus in upper respiratory secretion samples.                                                                                                                                                                                                                                                                                      |
| <b>CA42.Y</b> | <b>Other specified acute bronchitis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>CA43.Y</b> | <b>Other specified abscess of lung or mediastinum</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>CA43.Z</b> | <b>Abscess of lung or mediastinum, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**CA44****Pyothorax**

Suppurative inflammation of the pleural space, typically due to acute bacterial infection. It can occur as a complication of pneumonia, thoracotomy, abscesses (lung, hepatic, or subdiaphragmatic), or penetrating trauma with a secondary infection.

**Inclusions:** empyema  
pyopneumothorax

**Exclusions:** due to tuberculosis (1B10)

**CA45****Respiratory infections, not elsewhere classified**

**Exclusions:** Upper respiratory tract disorders (CA00-CA0Z)  
Chronic obstructive pulmonary disease (CA22)  
Certain lower respiratory tract diseases (CA20-CA2Z)

**CA4Y****Other specified lung infections****CA4Z****Lung infections, unspecified**

## Lung diseases due to external agents (CA60-CA8Z)

**Exclusions:** Asthma (CA23)

**CA60****Pneumoconiosis**

Pneumoconiosis is a lung disease due to inhalation of minute particles and characterised pathologically by interstitial fibrosis. The different types of pneumoconiosis vary in relation to the types of inhaled particles, often accompanied by certain occupational environments.

**CA60.0****Pneumoconiosis due to dust containing silica**

Interstitial lung disease due to inhalation of silica dust. The accumulation of silica/silicates in lung leads to fibrosis and formation of opacities in upper lobes of lungs on chest X-ray

**Exclusions:** with tuberculosis (1B10-1B1Z)

**CA60.00**

Pneumoconiosis due to talc dust

**CA60.0Y**

Other specified pneumoconiosis due to dust containing silica

**CA60.0Z**

Pneumoconiosis due to dust containing silica, unspecified

- CA60.1 Coal worker pneumoconiosis**  
Coalworker pneumoconiosis, an interstitial lung disease due to inhalation of coal dust. The accumulation of coal in the lung leads to fibrosis and formation of coal macules which are seen on chest X-ray as opacities and fibrosis.
- Inclusions:** Black lung  
Anthracosis  
Anthracosilicosis  
Coalworker lung
- Exclusions:** with tuberculosis (1B10-1B1Z)
- CA60.2 Pneumoconiosis due to mineral fibres including asbestos**  
Asbestosis is pneumoconiosis, an interstitial lung disease due to inhalation of asbestos fibres. The accumulation of fibres in the lung leads to diffuse fibrosis and formation of opacities in lower parts of lungs on chest X-ray. Asbestos bodies may be detected in lungs and sputum.
- Inclusions:** Asbestosis
- Exclusions:** Pleural plaque with presence of asbestos (CB20)  
with tuberculosis (1B10-1B1Z)
- CA60.3 Pneumoconiosis associated with tuberculosis**  
This is an occupational lung disease and a restrictive lung disease caused by the inhalation of dust, often in mines, associated with a common, and in many cases lethal, infectious disease caused by various strains of mycobacteria, usually *Mycobacterium tuberculosis*.
- CA60.4 Aluminosis of lung**  
Aluminosis is a lung disease caused by the inhalation of dusts of certain aluminium compounds.
- CA60.5 Bauxite fibrosis of lung**
- CA60.6 Berylliosis**  
Chronic beryllium disease also known as berylliosis is an occupational hypersensitivity disorder caused by beryllium exposure at the workplace. It is characterised by non-caseating, non-necrotising granulomata within affected organs, most frequently lung and skin.
- Coded Elsewhere:** Hepatic berylliosis (DB97.1)
- CA60.7 Graphite fibrosis of lung**  
Graphite fibrosis of lung is the pulmonary damage caused by excessive inhalation of graphite.
- CA60.8 Siderosis**  
Siderosis refers to pneumoconiosis resulting from inhalation of iron from welding fumes or from iron or hematite mine dust.

|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CA60.9</b> | <b>Stannosis</b><br>Stannosis is a benign non-fibrotic pneumoconiosis caused by exposure to tin oxides including stannous oxide (SnO) and stannic oxide (SnO <sub>2</sub> ). |
| <b>CA60.Y</b> | <b>Other specified pneumoconiosis</b>                                                                                                                                        |
| <b>CA60.Z</b> | <b>Pneumoconiosis, unspecified</b>                                                                                                                                           |

#### Pneumonitis (CA70-CA7Z)

Pneumonitis is a general term that refers to inflammation of lung tissue. Pneumonitis includes the non-infectious lung diseases that cause inflammation of the interstitium of the lung tissue mainly.

**Exclusions:** Pneumonia (CA40)

**Coded Elsewhere:** Chronic pneumonitis of infancy (CB04.6)

Aspiration pneumonitis due to anaesthesia during labour or delivery (JB0C.0)

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>CA71.3</b> | <b>Lipoid pneumonitis</b><br>Lipoid pneumonia (pneumonitis) refers to two types lipoid pneumonias (pneumonitises), one is Exogenous lipoid pneumonia (pneumonitis) and another is Endogenous lipoid pneumonia (pneumonitis). Exogenous lipoid pneumonia (pneumonitis) is the accumulation of aspirated oils within the alveoli and subsequent foreign body reaction. Endogenous lipoid pneumonia (pneumonitis), also called cholesterol pneumonia (pneumonitis) or golden pneumonia (pneumonitis), is a localised accumulation of lipid-laden macrophages within alveolar spaces distal to an obstructed airway. |

**CA8Y**

**Other specified lung diseases due to external agents**

**CA8Z**

**Lung diseases due to external agents, unspecified**

Respiratory diseases principally affecting the lung interstitium (CB00-CB0Z)

**Coded Elsewhere:** Lipoid pneumonitis (CA71.3)

**CB00**

**Acute respiratory distress syndrome**

Acute respiratory distress syndrome ("ARDS") is a life-threatening inflammation with oedema in the lungs which leads to severe respiratory failure. ARDS is a clinical syndrome of lung injury with hypoxic respiratory failure caused by intense pulmonary inflammation that develops after a severe physiologic insult.

**Coded Elsewhere:** Respiratory distress syndrome of newborn (KB23.0)

**CB01**

**Pulmonary oedema**

Pulmonary oedema is a condition caused by excess fluid in the lungs. This fluid collects in the numerous air sacs in the lungs, making it difficult to breathe.

**Exclusions:** Pulmonary oedema due to chemicals, gases, fumes or vapours (CA81.1)

Pulmonary oedema with mention of heart disease NOS or heart failure (BD11)

**CB02**

**Pulmonary eosinophilia**

Pulmonary eosinophilia are a heterogeneous group of disorders that share the feature of abnormally increased numbers of eosinophils.

**CB02.0**

**Asthmatic pulmonary eosinophilia**

Asthmatic pulmonary eosinophilia is a form of pulmonary eosinophilia associated with asthma which has been commonly attributed to fungi such as *Aspergillus* species. Although many cases have not shown any allergen.

**CB02.1**

**Idiopathic eosinophilic pneumonitis**

This is an idiopathic disease in which a certain type of white blood cell called an eosinophil accumulates in the lung. These cells cause disruption of the normal air spaces (alveoli) where oxygen is extracted from the atmosphere.

**Inclusions:** Idiopathic eosinophilic pneumonia

**CB02.10**

**Idiopathic acute eosinophilic pneumonitis**

Idiopathic acute eosinophilic pneumonia (pneumonitis) is characterised by acute febrile respiratory failure associated with diffuse radiographic infiltrates and eosinophilia in bronchoalveolar lavage fluid (BAL) in the absence of infection. Patients, who are initially healthy and often young, present with severe hypoxemia.

**Inclusions:** Idiopathic acute eosinophilic pneumonia

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>CB04.2</b>  | <b>Disorders of surfactant metabolism</b><br>Primary interstitial lung disease specific to childhood due to pulmonary surfactant protein anomalies is a group of interstitial lung diseases (ILD) induced by genetic mutations disrupting surfactant function and gas exchange in the lung. The disorders caused by these mutations affect full-term infants and older children and exhibit considerable overlap in their clinical and histologic presentation                                          |
| <b>CB04.3</b>  | <b>Alveolar or peri-alveolar conditions</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>CB04.30</b> | Idiopathic pulmonary haemosiderosis<br>Idiopathic pulmonary hemosiderosis is a respiratory disease due to repeated episodes of diffuse alveolar haemorrhage without any underlying apparent cause, most often in children. Anaemia, cough, and pulmonary infiltrates on chest radiographs are found in majority of the patients.                                                                                                                                                                        |
| <b>CB04.31</b> | Pulmonary alveolar proteinosis<br>This is a rare lung disease in which abnormal accumulation of surfactant occurs within the alveoli, interfering with gas exchange. PAP can occur in a primary form or secondarily in the settings of malignancy (especially in myeloid leukemia), pulmonary infection, or environmental exposure to dusts or chemicals.                                                                                                                                               |
| <b>CB04.3Y</b> | Other specified alveolar or peri-alveolar conditions                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>CB04.3Z</b> | Alveolar or peri-alveolar conditions, unspecified                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>CB04.4</b>  | <b>Pulmonary capillaritis</b><br>Isolated pauciimmune pulmonary capillaritis is a small vessel vasculitis restricted to the lungs that may induce diffuse alveolar haemorrhage with dyspnoea, anaemia, chest pain, haemoptysis, bilateral and diffuse alveolar infiltrates at chest X-rays, without any underlying systemic disease. ANCA are frequently positive but could be negative.                                                                                                                |
| <b>CB04.5</b>  | <b>Brain-lung-thyroid syndrome</b><br>Brain-lung-thyroid syndrome is a rare disorder characterised by congenital hypothyroidism, infant respiratory distress syndrome (IRDS) and benign hereditary chorea.                                                                                                                                                                                                                                                                                              |
| <b>CB04.6</b>  | <b>Chronic pneumonitis of infancy</b><br>Chronic pneumonitis of infancy is a rare paediatric form of interstitial lung disease (ILD) sharing clinical and radiologic features with other forms of ILD (cough, tachypnoea, and infiltrative opacities on chest imaging) and harbouring specific histological abnormalities including diffuse thickening of alveolar septa, hyperplasia of type 2 alveolar epithelial cells (AEC), and presence of primitive mesenchymal cells within the alveolar septa. |
| <b>CB04.7</b>  | <b>Neuroendocrine cell hyperplasia of infancy</b><br>Neuroendocrine cell hyperplasia of infancy is a non-lethal paediatric form of interstitial lung disease (ILD) characterised by tachypnoea and respiratory distress without respiratory failure.                                                                                                                                                                                                                                                    |
| <b>CB04.Y</b>  | <b>Other specified primary interstitial lung diseases specific to infancy or childhood</b>                                                                                                                                                                                                                                                                                                                                                                                                              |

**CB04.Z**      **Primary interstitial lung diseases specific to infancy or childhood, unspecified**

**CB05**      **Interstitial lung diseases associated with systemic diseases**

This refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs). This diagnosis is associated with diseases that affect a number of organs and tissues, or affects the body as a whole.

**Coding Note:**      Code also the causing condition

**CB05.0**      **Diffuse alveolar damage**

This is a histological pattern in lung disease. It is seen in acute respiratory distress syndrome (ARDS), transfusion related acute lung injury (TRALI) and acute interstitial pneumonia (pneumonitis) (AIP).

**CB05.1**      **Interstitial lung diseases associated with connective tissue diseases**

Interstitial lung diseases associated with connective tissue diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs) associated with connective tissue diseases.

**Coding Note:**      Code also the causing condition

**Coded Elsewhere:**      Respiratory disorders in juvenile dermatomyositis (CB40.Y)

Respiratory disorders in other dermatomyositis (CB40.Y)

Respiratory disorders in polymyositis (CB40.Y)

Respiratory disorders in Sjögren syndrome (CB40.Y)

Respiratory disorders in systemic lupus erythematosus  
(CB40.Y)

Respiratory disorders in systemic sclerosis (CB40.Y)

**CB05.2**      **Interstitial lung diseases associated with granulomatous diseases**

Interstitial lung diseases associated with granulomatous diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs) associated with granulomatous diseases, such as sarcoidosis.

**Coded Elsewhere:**      Sarcoidosis of lung (4B20.0)

Sarcoidosis of lung with sarcoidosis of lymph nodes (4B20.Y)

**CB05.3**      **Interstitial lung diseases associated with metabolic diseases**

Interstitial lung diseases associated with metabolic diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs). This diagnosis is associated with a large class of genetic diseases involving disorders of metabolism.

**Coding Note:**      Code also the causing condition

**Coded Elsewhere:**      Familial hypocalciuric hypercalcaemia (5A51.2)

Hermansky-Pudlak syndrome with pulmonary fibrosis  
(EC23.20)

| <b>CB06</b>         | <p><b>Pulmonary alveolar microlithiasis</b></p> <p>Pulmonary alveolar microlithiasis is an idiopathic rare disease in which concretions composed of calcium and phosphorus collect in alveolar spaces. A systemic disorder of calcium metabolism has not been identified, and the serum calcium and phosphate levels are normal. Cough and dyspnoea are the most common presenting symptoms. Expecterated microliths have been reported. Inspiratory crackles, finger clubbing, and signs of cor pulmonale may be present in more advanced disease.</p>                                        |

**CB07****Lymphangioleiomyomatosis**

Lymphangioleiomyomatosis (LAM) is a multiple cystic lung disease characterised by progressive cystic destruction of the lung and lymphatic abnormalities, frequently associated with renal angiomyolipomas (AMLs). LAM occurs either sporadically or as a manifestation of tuberous sclerosis complex (TSC).

**CB07.0****Lymphangioleiomyomatosis associated with tuberous sclerosis complex**

This is a rare lung disease that results in a proliferation of disorderly smooth muscle growth (leiomyoma) throughout the lungs, in the bronchioles, alveolar septa, perivascular spaces, and lymphatics, resulting in the obstruction of small airways (leading to pulmonary cyst formation and pneumothorax) and lymphatics (leading to chylous pleural effusion). This diagnosis is associated with a rare multi-system genetic disease that causes non-malignant tumours to grow in the brain and on other vital organs such as the kidneys, heart, eyes, lungs, and skin.

**CB07.1****Sporadic lymphangioleiomyomatosis**

This is a rare lung disease that results in a proliferation of disorderly smooth muscle growth (leiomyoma) throughout the lungs, in the bronchioles, alveolar septa, perivascular spaces, and lymphatics, resulting in the obstruction of small airways (leading to pulmonary cyst formation and pneumothorax) and lymphatics (leading to chylous pleural effusion). LAM occurs in a sporadic form, which affects only females, usually of childbearing age; LAM also occurs in patients who have tuberous sclerosis.

**CB07.Y****Other specified lymphangioleiomyomatosis****CB07.Z****Lymphangioleiomyomatosis, unspecified****CB0Y****Other specified respiratory diseases principally affecting the lung interstitium****CB0Z****Respiratory diseases principally affecting the lung interstitium, unspecified****Pleural, diaphragm or mediastinal disorders (CB20-CB2Z)**

Pleural, diaphragm and mediastinal disorders are disorders of the potential space between the two pleura (visceral and parietal) of the lungs, disorders of the diaphragm and mediastinum. The mediastinum is an undelineated group of structures in the thorax, surrounded by loose connective tissue. It is the central compartment of the thoracic cavity.

**CB20****Pleural plaque**

Deposits of hyalinized collagen fibres in the parietal pleura that result from chronic inflammation. Most commonly associated with past exposure to asbestos, typically becoming visible years after inhalation of the inciting exposure.

**CB21****Pneumothorax**

Pneumothorax is an abnormal collection of air or gas in the pleural space that separates the lung from the chest wall, and that may interfere with normal breathing.

**Exclusions:** pyopneumothorax (CA44)  
 pneumothorax: tuberculous (not confirmed) (1B10.1)  
 Traumatic pneumothorax (NB32.0)  
 pneumothorax: tuberculous (confirmed) (1B10.0)

**Coded Elsewhere:** Pneumothorax originating in the perinatal period (KB27.1)

**CB21.0****Spontaneous tension pneumothorax**

A tension pneumothorax is present when the intrapleural pressure is greater than atmospheric throughout expiration and often during inspiration as well. The mechanism responsible for tension pneumothorax is the disruption of the visceral or parietal pleura in such a manner that a one-way valve develops. A tension pneumothorax can occur after any type of pneumothorax; it is independent of the etiology. It can sometimes occur after a spontaneous pneumothorax but is more common after a traumatic pneumothorax, with mechanical ventilation, or during cardiopulmonary resuscitation.

**CB21.1****Other spontaneous pneumothorax**

Spontaneous pneumothorax that is not tension pneumothorax is included in this classification.

They include primary spontaneous pneumothorax without tension and secondary spontaneous pneumothorax without tension. Primary spontaneous pneumothorax occurs in patients without underlying pulmonary disease, classically in tall, thin young men in their teens and 20s. It is thought to be due to spontaneous rupture of subpleural apical blebs or bullae that result from smoking or that are inherited. It generally occurs at rest, although some cases occur during activities involving reaching or stretching. Primary spontaneous pneumothorax also occurs during diving and high-altitude flying because of unequally transmitted pressure changes in the lung. Secondary spontaneous pneumothorax occurs in patients with underlying pulmonary disease. It most often results from rupture of a bleb or bulla in patients with severe COPD, HIV-related *Pneumocystis jirovecii* infection, cystic fibrosis, or any underlying pulmonary parenchymal disease. Secondary spontaneous pneumothorax is more serious than primary spontaneous pneumothorax because it occurs in patients whose underlying lung disease decreases their pulmonary reserve.

**CB21.Y****Other specified pneumothorax****CB21.Z****Pneumothorax, unspecified****CB22****Diseases of mediastinum, not elsewhere classified**

This refers to diseases of the mediastinum where the mediastinum is an undelineated group of structures in the thorax, surrounded by loose connective tissue. It is the central compartment of the thoracic cavity

**Exclusions:** Abscess of mediastinum (CA43.3)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>CB22.0</b> | <b>Fibrosing mediastinitis</b><br>Fibrosing mediastinitis, also known as sclerosing mediastinitis or mediastinal fibrosis, is a disorder characterised by an excessive fibrotic reaction in the mediastinum. It can result in compromise of airways, great vessels, and other mediastinal structures, with morbidity directly related to the location and extent of fibrosis. The commonest cause is histoplasmosis, of which it is a rare late complication, but it may also occur in association with other infections and with systemic autoimmune disorders such as Behçet disease, granulomatosis with polyangiitis and retroperitoneal fibrosis. |
| <b>CB22.Y</b> | <b>Other specified diseases of mediastinum, not elsewhere classified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>CB22.Z</b> | <b>Diseases of mediastinum, not elsewhere classified, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>CB23</b>   | <b>Disorders of diaphragm</b><br>This category includes the abnormalities of diaphragmatic position or motion (paralysis, relaxation, and acquired deformity) and the inflammation of the diaphragm, but neoplasms of the diaphragm, congenital malformation of diaphragm, and diaphragmatic hernias are included in other categories.<br><br><i>Exclusions:</i> Congenital diaphragmatic hernia (LB00.0)<br>Structural developmental anomalies of diaphragm (LB00)                                                                                                                                                                                    |
| <b>CB24</b>   | <b>Chylous effusion</b><br>A chylothorax (chylous effusion) signifies leakage of chyle from the thoracic duct. A pleural fluid triglyceride concentration of more than 110 mg per decilitre signifies a high likelihood of chylothorax, whereas a triglyceride concentration below 50 mg per decilitre makes chylothorax highly unlikely.<br><br><i>Inclusions:</i> Chyliform effusion                                                                                                                                                                                                                                                                 |
| <b>CB25</b>   | <b>Fibrothorax</b><br>Fibrothorax results from fibrosis of the visceral pleura, and is clinically manifested by decreased respiratory excursion and restrictive pulmonary physiology. There are two distinct mechanisms that can lead to the formation of fibrothorax: 1) Most often, fibrothorax develops as a consequence of pleural inflammation in patients with pleural effusions, including hemothorax, tuberculous effusion, or chronic empyema; 2) Less frequently, fibrothorax results from pulmonary parenchymal disease, and can be seen in patients with tuberculosis, bronchiectasis, or lung abscess.                                    |
| <b>CB26</b>   | <b>Haemothorax</b><br>Hemothorax is the presence of blood with or without air in the pleural space. The most common cause is chest trauma. Hemothorax should be considered to be present when the haematocrit of the pleural fluid is more than half that of the peripheral blood. A number of bleeding sites may be responsible for the hemothorax, including pulmonary laceration, intercostal vessel laceration, and rupture of pleural adhesions.                                                                                                                                                                                                  |

**CB27****Pleural effusion**

Presence of fluid in the pleural cavity resulting from excessive transudation or exudation from the pleural surfaces.

**Coding Note:** Code also the causing condition

**Inclusions:** Pleurisy with effusion

**Exclusions:** Tuberculosis of the respiratory system (1B10)  
Chylous effusion (CB24)  
Pleurisy (MD31)

**CB2Y****Other specified pleural, diaphragm or mediastinal disorders****CB2Z****Pleural, diaphragm or mediastinal disorders, unspecified****CB40****Certain diseases of the respiratory system**

**Coded Elsewhere:** Pulmonary sporotrichosis (1F2J.2)  
Alpha-1-antitrypsin deficiency (5C5A)  
Airway obstruction in the neonate due to airway abnormality (KB2J)

**CB40.0****Ciliary dyskinesia**

Defective function of the cilia lining the respiratory tract (lower and upper, sinuses, Eustachian tube, middle ear) resulting in altered mucociliary transport and manifesting as recurrent upper and lower respiratory infection, chronic productive cough, chronic rhinosinusitis or persistent otitis media. Acquired forms result from respiratory tract injury associated especially with respiratory infections such as bronchiolitis or chronic obstructive pulmonary disease. The rare primary forms are inherited as autosomal recessive disorders presenting early in life and typically progressing to bronchiectasis; they may be associated with infertility in men and women due to abnormal sperm motility or fallopian tube function respectively.

**Coded Elsewhere:** Primary ciliary dyskinesia (LA75.Y)  
Syndromic ciliary dyskinesia (LA75.Y)

**CB40.1****Young syndrome**

Young syndrome is characterised by the association of obstructive azoospermia with recurrent sinobronchial infections.

**CB40.2****Pulmonary collapse**

**Inclusions:** Atelectasis

**Exclusions:** Primary atelectasis of newborn (KB2B)  
atelectasis (of): tuberculous (not confirmed) (1B10.1)  
atelectasis (of): tuberculous (confirmed) (1B10.0)

**CB40.3****Interstitial emphysema**

This is a collection of air outside of the normal air passages in the body and instead is found inside the connective tissue of the peribronchovascular sheaths, interlobular septa, and visceral pleura. This collection develops as a result of alveolar and terminal bronchiolar rupture.

**Exclusions:**

emphysema: NOS (CA21)

emphysema: surgical (subcutaneous) (NE81)

Traumatic subcutaneous emphysema, not elsewhere classified (NFOA.7)

**Coded Elsewhere:** Pneumomediastinum originating in the perinatal period (KB27.2)

Interstitial emphysema originating in the perinatal period (KB27.0)

**CB40.4****Compensatory emphysema**

Compensatory emphysema is a condition in which one portion of the lung increases in size and function, when another portion is destroyed or temporarily useless. It occurs, for instance, in association with pneumonias, pleural effusions and pneumothorax. Anatomically, there is found an enlargement of the normal lung; there are no variations from the normal structure; the unaffected lung, as a result of distention, has an increased vital capacity and is able to perform a greater amount of work than when in its usual condition. The tissues show no similarity to those truly emphysematous. This change is in no way related to true emphysema and the term should not be used, as it creates great confusion in the literature. Its use is no more justified than that of speaking of the compensatory enlargement of a kidney, when the opposite kidney has been removed, as of a compensatory nephritis. True emphysema can never compensate for diseased lung tissue, because the emphysematous lung is totally or almost totally functionless.

**CB40.Y****Other specified diseases of the respiratory system****CB41****Respiratory failure**

Respiratory failure is a life-threatening impairment of oxygenation or carbon dioxide (CO<sub>2</sub>) elimination. Respiratory failure may occur because of impaired gas exchange, decreased ventilation, or both. The level of oxygen in the blood becomes dangerously low or the level of carbon dioxide becomes dangerously high.

**Coding Note:** Code also the causing condition

**Exclusions:**

Acute respiratory distress syndrome (CB00)

Respiratory arrest (MD33)

Respiratory distress of newborn (KB23)

**CB41.0****Acute respiratory failure**

Respiratory failure can be acute (short term) or chronic (ongoing), using time as the main parameter. In acute respiratory failure hypoxemia occurs over a period of hours to days (less than 7 days), and acute respiratory failure can develop quickly and may require emergency treatment.

**Coding Note:** Code also the causing condition

| <b>CB41.2</b>       | <b>Respiratory failure, unspecified as acute or chronic</b><br>This is inadequate gas exchange by the respiratory system, with the result that levels of arterial oxygen, carbon dioxide or both cannot be maintained within their normal ranges, unspecified.                                                                                        |
| <b>Coding Note:</b> | Code also the causing condition                                                                                                                                                                                                                                                                                                                       |
| <b>CB41.20</b>      | Respiratory failure, unspecified, Type I<br>This is when the PaCO <sub>2</sub> may be normal or low. It is typically caused by a ventilation/perfusion (V/Q) mismatch; the volume of air flowing in and out of the lungs is not matched with the flow of blood to the lungs. The basic defect in type 1 respiratory failure is failure of oxygenation |
| <b>CB41.21</b>      | Respiratory failure, unspecified, Type II<br>Type 2 respiratory failure is caused by inadequate ventilation; both oxygen and carbon dioxide are affected. Defined as the build up of carbon dioxide levels (PaCO <sub>2</sub> ) that has been generated by the body.                                                                                  |

**CB41.2Z** Respiratory failure, unspecified  
**Coding Note:** Code also the causing condition

## Postprocedural disorders of the respiratory system (CB60-CB64)

**Exclusions:** Acute pulmonary manifestations due to radiation (CA82.0)

**Coded Elsewhere:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

**CB60** Tracheostomy malfunction

**CB61** Chronic pulmonary insufficiency following surgery

**CB62** Postprocedural subglottic stenosis

**CB63** Postprocedural stenosis of the trachea

**CB64** Transfusion related acute lung injury

This is a serious blood transfusion complication characterised by the acute onset of non-cardiogenic pulmonary oedema following transfusion of blood products.

**CB7Z** Diseases of the respiratory system, unspecified

# CHAPTER 13

---

## Diseases of the digestive system

This chapter has 158 four-character categories.

Code range starts with DA00

- Exclusions:**
- Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Neoplasms (Chapter 02)
  - Certain infectious or parasitic diseases (Chapter 01)
  - Complications of pregnancy, childbirth and the puerperium (Chapter 18)
  - Mental, behavioural or neurodevelopmental disorders (Chapter 06)
- Coded Elsewhere:**
- Digestive system disorders of fetus or newborn (KB80-KB8Z)
  - Symptoms, signs or clinical findings of the digestive system or abdomen (MD80-ME4Y)
  - Structural developmental anomalies of the digestive tract (LB10-LB1Z)
  - Diseases of the digestive system complicating pregnancy, childbirth or the puerperium (JB64.6)

This chapter contains the following top level blocks:

- Diseases or disorders of orofacial complex
- Diseases of oesophagus
- Diseases of the stomach or the duodenum
- Diseases of small intestine
- Diseases of appendix
- Diseases of large intestine
- Diseases of anal canal
- Diseases of liver
- Diseases of gallbladder or biliary tract
- Diseases of pancreas
- Diseases of peritoneum
- Diverticular disease of intestine
- Ischaemic vascular disorders of intestine
- Hernias
- Inflammatory bowel diseases
- Functional gastrointestinal disorders

- Postprocedural disorders of digestive system

## Diseases or disorders of orofacial complex (DA00-DA0Z)

Morbid process, derangement or abnormality localised in the mouth or related tissues of the face

**Coded Elsewhere:** Structural developmental anomalies of mouth or tongue (LA31)

Symptoms or signs of the orofacial complex (MD80)

Jaw pain (ME86.9)

### DA00

#### Disorders of lips

A group of any derangement or condition affecting the normal structure and function of the lips resulting from developmental or traumatic factors or systemic disease.

**Coded Elsewhere:** Lichen planus of lips (EA91.Y)

#### DA00.0

##### Cheilitis

Cheilitis is the generic term given to inflammatory conditions of the lip.

**Coded Elsewhere:** Actinic cheilitis (EK90.Y)

#### DA00.1

##### Self-induced lip trauma

Self-inflicted damage to lips by biting, picking, chewing etc.

**Coded Elsewhere:** Artefactual cheilitis (ED00)

#### DA00.2

##### Pigmentary abnormalities of lips

This is an abnormality in the material that changes the colour of reflected or transmitted light as the result of wavelength-selective absorption, of the lips.

#### DA00.3

##### Lip fissure

#### DA00.Y

##### Other specified disorders of lips

#### DA00.Z

##### Disorder of lips, unspecified

### DA01

#### Disorders of oral mucosa

Inflammation of the soft tissues of the mouth, such as mucosa; palate; gingiva; and/or lip, as well as any associated pathological or traumatic discontinuity of tissue

##### Exclusions:

Noma (DA0C.31)

gangrenous stomatitis (1C1H)

Cheilitis (DA00.0)

cancrum oris (DA0C.31)

**Coded Elsewhere:** Lichen planus and lichenoid reactions of oral mucosa (EA91.4)

Oral submucous fibrosis (DA02.2)

Oral allergy syndrome (EK10.0)

Contact gingivostomatitis (DA02.3)

Neonatal disorders of the oral mucosa (KC23)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DA01.0</b>  | <b>Disturbances of oral epithelium</b><br><b>Coded Elsewhere:</b> Cheek-biting (6B25.Y)                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>DA01.00</b> | Oral leukoplakia<br>Leukoplakia is a condition where areas of keratosis appear as adherent white patches on the mucous membranes of the oral cavity. Leukoplakia may affect other gastrointestinal tract mucosal sites, or mucosal surfaces of the urinary tract and genitals.<br><b>Inclusions:</b> Leukoplakia of gingiva<br><b>Exclusions:</b> Hairy leukoplakia (DA01.01)                                                                                                                      |
| <b>DA01.01</b> | Hairy leukoplakia<br>Oral hairy leukoplakia is a focal epithelial hyperplasia of the oral mucosa associated with Epstein-Barr virus. It is closely associated with HIV and occurs in both immunocompromised and immunocompetent HIV-infected individuals. It is also, however, found in uninfected people who are immunosuppressed, e.g. organ transplant recipients. It presents as white patches with a corrugated or hairy appearance affecting particularly the lateral borders of the tongue. |
| <b>DA01.02</b> | Wandering rash of the mouth<br>The counterpart of geographic tongue affecting other parts of the oral epithelium. It is less common than geographic tongue.                                                                                                                                                                                                                                                                                                                                        |
| <b>DA01.0Y</b> | Other specified disturbances of oral epithelium                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>DA01.1</b>  | <b>Noninfectious erosive or ulcerative disorders of oral mucosa</b><br>A group of erosive and ulcerative disorders of oral mucosa without infection.<br><b>Coded Elsewhere:</b> Oral pemphigus (EB40.00)<br>Stevens-Johnson syndrome (EB13.0)<br>Pyodermatitis–pyostomatitis vegetans (EL3Y)<br>Lupus erythematosus of oral mucosa (4A40.Y)                                                                                                                                                        |
| <b>DA01.10</b> | Oral aphthae or aphtha-like ulceration<br>This is a frequent small, shallow, painful ulceration in the oral mucosa. Recurrent oral ulceration that clinically resembles recurrent aphthous stomatitis but presents atypically, including commencement after adolescence, with fever, with a strong family history, or failing to resolve with age.<br><b>Coded Elsewhere:</b> Oropharyngeal ulceration due to Behçet disease (4A62)                                                                |
| <b>DA01.11</b> | Oral mucositis<br>Ulcerative mucositis is the inflammation of the oral mucosa with inflammation, ulceration and frequently with bleeding.                                                                                                                                                                                                                                                                                                                                                          |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DA01.12</b> | <p>Chronic ulcerative stomatitis</p> <p>Chronic ulcerative stomatitis (CUS) is a rare disease which presents with chronic oral mucosal erosions and ulceration resembling erosive lichen planus but refractory to standard therapies. It typically occurs in older women. Diagnosis requires the demonstration of speckled granular perinuclear IgG deposits in the basal and parabasal layers of oral epithelium (stratified epithelium-specific antinuclear or SES-ANA pattern). There is increasing evidence that CUS is an autoimmune disease provoked by circulating IgG antibodies directed against delta-Np63, an isoform of the p53 family of nuclear transcription factors which is present around the nuclei of normal oral epithelial basal keratinocytes. CUS normally responds to treatment with hydroxychloroquine.</p> |
| <b>DA01.13</b> | <p>Erythema multiforme with oral ulceration</p> <p>This is a skin condition of unknown cause, possibly mediated by deposition of immune complex (mostly IgM) in the superficial microvasculature of the skin and oral mucous membrane that usually follows an infection or drug exposure.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>DA01.14</b> | <p>Drug-induced oral ulcer</p> <p>Ulceration of the oral mucosa attributable to medication. Non-steroidal anti-inflammatory drugs (NSAIDs) and cytotoxic drugs such as methotrexate are well recognised causes but many others have been incriminated.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>DA01.15</b> | <p>Mouth ulcers</p> <p>Oral ulceration of other specified or unspecified type.</p> <p><b>Exclusions:</b>            Mechanical oral ulceration (DA01.1)</p> <p>                              Drug-induced oral ulcer (DA01.14)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>DA01.1Y</b> | Other specified noninfectious erosive or ulcerative disorders of oral mucosa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>DA01.2</b>  | <p><b>Granuloma or granuloma-like lesions of oral mucosa</b></p> <p>This is a specific type of chronic inflammatory response of the oral mucosa characterised by a localised accumulation of epithelioid macrophages, multi nucleate giant cells, and lymphocytes.</p> <p><b>Inclusions:</b>            Denture granuloma</p> <p><b>Coded Elsewhere:</b> Sarcoidosis of oral cavity (4B20.Y)</p> <p>                              Crohn disease of lips or oral mucosa (DD70.0)</p>                                                                                                                                                                                                                                                                                                                                                   |
| <b>DA01.20</b> | <p>Giant cell granuloma, central</p> <p>A benign condition of the jaws. It is twice as likely to affect women and is more likely to occur in individuals between the age of 20 and 40. Central giant cell granulomas are more common in the mandible and often cross the midline.</p> <p><b>Exclusions:</b>            peripheral giant cell granuloma (DA0D)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>DA01.21</b> | <p>Orofacial granulomatosis</p> <p>Orofacial granulomatosis (OFG) is an uncommon clinicopathological entity characterised by persistent and/or recurrent lymphoedema and fissuring of the lips and oral mucosa (the latter resulting in a "cobblestone" appearance), oral ulceration and the presence on biopsy of non-caseating granulomas. OFG may be an early manifestation of Crohn disease, sometimes presenting months or years before bowel disease. Some cases are associated with dental infections, sarcoidosis, food allergy or contact allergy. Granulomatous cheilitis is a form of OFG confined to the lips. Rarely, OFG may be associated with fissured tongue and facial palsy (Melkersson-Rosenthal syndrome).</p> <p><b>Coded Elsewhere:</b> Granulomatous cheilitis (DA00.0)</p> |

**DA03****Diseases of tongue**

Any pathological process affecting the structural tissues of the tongue with or without interference of its normal functions.

**Exclusions:** leukoplakia of tongue (DA01.00)  
 erythroplakia of tongue (DA01.0)  
 leukoedema of tongue (DA01.0)  
 Hairy leukoplakia (DA01.01)  
 submucous fibrosis of tongue (DA02.2)  
 Ankyloglossia (LA31.2)

**Coded Elsewhere:** Sublingual varices (BD75.0)

**DA03.0****Glossitis**

Inflammation of the tongue

**Exclusions:** atrophic glossitis (DA03.2)

**DA03.1****Geographic tongue**

A condition characterised by migratory glossitis and loss of dorsal papillae with a map-like appearance that gives origin to the name.

**Inclusions:** Benign migratory glossitis  
 Glossitis areata exfoliativa  
 Erythema migrans of tongue

**DA03.2****Atrophy of tongue papillae**

**Inclusions:** Atrophic glossitis  
 Central papillary atrophy of the tongue

**DA03.3****Median rhomboid glossitis****DA03.4****Hypertrophy of tongue papillae**

**Inclusions:** Hypertrophy of foliate papillae

**DA03.5****Macroglossia**

Macroglossia is the medical term for a large or enlarged tongue. It may be due to a variety of congenital and acquired conditions. Isolated macroglossia has no determinable cause. It is seen commonly in Down syndrome. The most common causes of tongue enlargement are vascular malformations (e.g. lymphangioma or haemangioma) and muscular hypertrophy. It may, however, be due to infiltration, as with primary systemic amyloidosis.

**Coded Elsewhere:** Congenital macroglossia (LA31.0)  
 Macroglossia due to primary systemic amyloidosis (5D00.Y)

**DA03.Y****Other specified diseases of tongue****DA03.Z****Diseases of tongue, unspecified**

**DA04****Diseases of salivary glands**

A group of diseases with any pathological condition that affects the structural tissues of the salivary glands or the salivary ducts which may or not interfere with the normal production and transport of saliva into the oral cavity.

**Coded Elsewhere:** Aplasia of lacrimal or salivary glands (LA14.10)

Uveoparotid fever (4B20.Y)

**DA04.0****Atrophy of salivary gland**

Salivary gland atrophy is a wasting or decrease in size of salivary gland, which is not sufficient to cause necrosis. It may occur in response to poor nutrition, lack of use (disuse or immobilization), reduction in blood supply, loss of nerve supply, chronic cell injury, or ageing etc. It is including Sjögren's syndrome, irradiation therapy and obstructive sialadenitis.

**DA04.1****Hypertrophy of salivary gland****DA04.2****Sialoadenitis**

Sialoadenitis (or Sialadenitis) is an inflammation of the salivary gland. It is often associated with pain, tenderness, redness, and gradual localised swelling of the affected area.

**Exclusions:** epidemic parotitis (1D80.0)

Uveoparotid fever (4B20)

**DA04.3****Abscess of salivary gland**

This is a collection of pus (neutrophils) that has accumulated within the salivary gland because of an inflammatory process in response to either an infectious process (usually caused by bacteria or parasites) or other foreign materials.

**DA04.4****Sialolithiasis**

Sialolithiasis is a condition where a calcified mass forms within a salivary gland, usually in the duct of the submandibular gland. The usual symptoms are pain and swelling of the affected salivary gland, both of which get worse when salivary flow is stimulated.

**Inclusions:** Calculus of salivary gland or duct

Stone of salivary gland or duct

**DA04.5****Mucocele of salivary gland**

This is a clinical term used to describe a bluish, soft, often fluctuant swelling caused by either blockage or rupture of a salivary gland duct.

**DA04.6****Disturbances of salivary secretion**

A group of conditions characterised by an increase or decrease in saliva secretion.

**Exclusions:** Dry mouth (DA02.1)

**Coded Elsewhere:** Xerostomia due to disturbance of salivary secretion (DA02.1)

**DA04.7****Sialophagia**

Excessive swallowing of saliva

**DA06.3****Stafne mandibular bone cavity**

Although commonly called a Stafne cyst, this entity is not a true cyst but rather a cavity due to a focal cortical defect of the medial aspect of the mandible. It is found most frequently in middle-aged men and is usually discovered radiologically as an incidental finding. Its importance is that it may be difficult to distinguish from other radiolucent lesions in the mandible such as myeloma or metastatic squamous carcinoma. The cavity is usually filled by part of the submandibular salivary gland or adjacent fat and it is thought to result from remodelling of the bone by adjacent salivary tissue. Stafne cysts are most frequently seen in middle-aged men. The estimated prevalence ranges around 0.10-0.48%. Pathology: Stafne cysts are thought to result from remodelling of the bone by adjacent salivary tissue, and have been noted to regress following resection of the gland nearby. They generally appear in the area between the mandibular first molar and the mandibular angle 6.

**DA07****Disorders of tooth development or eruption**

Alteration of the normal formation process of the tooth, the normal chronology of eruption into the mouth or the proper alignment in the dental arch affecting a single or multiple teeth.

**Inclusions:** disorder of tooth development

**Coded Elsewhere:** Anodontia (LA30.0)

Hypodontia (LA30.1)

Oligodontia (LA30.2)

Hyperdontia (LA30.3)

Abnormalities of size or form of teeth (LA30.4)

Amelogenesis imperfecta (LA30.6)

Dentine dysplasia (LA30.7)

Dentinogenesis imperfecta (LA30.8)

Odontogenesis imperfecta (LA30.9)

Solitary median maxillary central incisor syndrome (LA30.Y)

Hereditary disturbances in tooth structure (LA30.Z)

Papillon-Lefèvre syndrome (EC20.30)

**DA07.0****Fluoride related opacities or lesions**

This is a fluoride related abnormality in the tissue of an organism (in layman's terms, "damage"), usually caused by disease or trauma.

**DA07.1****Nonfluoride enamel opacities**

This is a condition characterised by enamel opacities, white spots, or visibly lighter areas on a tooth's surface, not attributed to fluorine, which occur in low-fluoride areas.

**DA08****Diseases of hard tissues of teeth**

This is a group of conditions affecting the integrity of tooth enamel, dentine or cementum.

**DA08.0****Dental caries**

A condition characterised by localised destruction of calcified tissue, initiated on the tooth surface by decalcification of the enamel, followed by the enzymatic lysis of organic structures, resulting in cavity formation.

**Inclusions:** Dental decay

**DA08.1****Certain specified diseases of hard tissues of teeth**

**Exclusions:** Dental caries (DA08.0)  
bruxism (DA0E.7)  
teeth-grinding NOS (DA0E.7)

**Coded Elsewhere:** Ankylosis of teeth (DA07.61)

**DA08.10****Excessive attrition of teeth**

The pathological wearing away of tooth substance as a result of tooth-to-tooth contact.

**DA08.11****Abrasion of teeth**

Abrasion is abnormal tooth surface loss resulting from direct friction forces between the teeth and external objects or from frictional forces between contacting teeth components in the presence of an abrasive medium.

**DA08.12****Erosion of teeth**

Tooth erosion is a gradual and irreversible loss of the normally hard surface of the tooth due to chemical, not bacterial, processes.

**DA08.13****Abfraction**

Theoretical concept of loss of tooth structure not caused by dental caries

**Inclusions:** non-carious cervical lesion

**DA08.14****Pathological resorption of teeth**

Tooth resorption, external, resorption of calcified dental tissue, beginning on the external surface, usually at the apex or the lateral surface of the root, as a result of tissue reaction in the periodontal or pericoronal tissue, increasing in severity with age.

**DA08.15****Posteruptive colour changes of dental hard tissues**

This is a condition characterised by colour changes of the dental hard tissues after tooth eruption.

**Exclusions:** Deposits on teeth (DA08.4)

**DA08.2****Chronic dental injuries**

A group of conditions characterised by persistent or long-lasting damage caused by an external force applied to the tooth resulting from intentional or unintentional means.

**DA0E.Z**            **Dentofacial anomalies, unspecified**

**DA0F**            **Sensory disturbances affecting orofacial complex**

*Coded Elsewhere:* Trigeminal neuralgia (8B82.0)

Dysgeusia (MB41.2)

**DA0F.0**            **Burning mouth syndrome**

Chronic burning mouth pain is chronic orofacial pain with an intraoral burning or dysaesthetic sensation that recurs for more than two hours per day on 50 % of the days over more than three months, without evident causative lesions on clinical investigation and examination. It is characterised by significant emotional distress (anxiety, anger/frustration or depressed mood) or interference with orofacial functions such as eating, yawning, speaking etc. Chronic burning mouth pain is multifactorial: biological, psychological and social factors contribute to the pain condition. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms.

**DA0Z**            **Diseases or disorders of orofacial complex, unspecified**

## Diseases of oesophagus (DA20-DA2Z)

*Coded Elsewhere:* Neoplasms of the oesophagus

Structural developmental anomalies of oesophagus (LB12)

Foreign body in oesophagus (ND73.1)

**DA20**            **Acquired anatomical alterations of the oesophagus**

This group incorporates oesophageal disorders principally due to acquired morphological changes of the oesophagus.

*Exclusions:*            Structural developmental anomalies of oesophagus (LB12)

**DA20.0**            **Oesophageal obstruction**

Hindrance of the passage of luminal contents in the oesophagus. Obstruction of oesophagus can be partial or complete, and caused by intrinsic or extrinsic factors.

*Exclusions:*            Congenital stenosis or stricture of oesophagus (LB12.3)

Anatomical alteration due to gastro-oesophageal reflux disease (DA22)

Neoplasms of the oesophagus ( )

Foreign body in oesophagus (ND73.1)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**DA26****Vascular disorders of the oesophagus**

This group incorporates vascular disorders principally affecting the blood vessels of the oesophagus. They include vascular disorders of arteries, veins and capillaries that carry blood to and from the oesophagus.

**DA26.0****Oesophageal varices**

Abnormally dilated veins developed as portosystemic shunts in the lining of the lower oesophagus in patients with portal hypertension. Once oesophageal varices develop, they continue to grow, and bleeding from oesophageal varices can be fatal.

**Coding Note:** Code also the causing condition

**DA26.00**

Oesophageal varices with bleeding

**Coding Note:** Code also the causing condition

**DA26.01**

Oesophageal varices without bleeding

**Coding Note:** Code also the causing condition

**DA26.0Z**

Oesophageal varices, unspecified

**Coding Note:** Code also the causing condition

**DA26.1****Angiodysplasia or arteriovenous malformation of oesophagus**

Enlarged or widened blood vessels with thin walls that are similar to varicose veins. It can be a source of gastrointestinal bleeding and anaemia.

**DA26.2****Intramural haemorrhage of oesophagus**

Hematoma in the oesophageal wall that can be formed spontaneously or as a result of trauma, toxic ingestion, or endoscopic procedures. It is rarely observed.

**Inclusions:** Intramural haematoma of oesophagus

**Exclusions:** Oesophageal varices (DA26.0)

**DA26.3****Gastro-oesophageal laceration-haemorrhage syndrome**

Bleeding from tears in the mucosa at the junction of the stomach and oesophagus, usually caused by severe vomiting, retching or coughing.

**Inclusions:** Mallory-Weiss syndrome

Mallory-Weiss tear

Mallory-Weiss lesion

**DA26.Y****Other specified vascular disorders of the oesophagus****DA26.Z****Vascular disorders of the oesophagus, unspecified****DA2Y****Other specified diseases of oesophagus****DA2Z****Diseases of oesophagus, unspecified**

## Diseases of the stomach or the duodenum (DA40-DA7Z)

### Diseases of stomach (DA40-DA4Z)

This is a group of conditions characterised as being in or associated with the stomach.

**Exclusions:**           Gastrostomy malfunction (DE12.1)  
                              Diaphragmatic hernia (DD50.0)

**Coded Elsewhere:** Neoplasms of the stomach  
                              Structural developmental anomalies of stomach (LB13)  
                              Gastric ulcer (DA60)  
                              Peptic ulcer, site unspecified (DA61)  
                              Anastomotic ulcer (DA62)  
                              Foreign body in stomach (ND73.2)

### DA40

#### **Acquired anatomical alterations of the stomach**

This group incorporates gastric disorders principally due to acquired morphological changes of the stomach.

**Exclusions:**           Structural developmental anomalies of stomach (LB13)  
                              Diaphragmatic hernia (DD50.0)

#### **DA40.0**

##### **Gastric outlet obstruction**

Gastric outlet obstruction is a disorder characterised by epigastric abdominal pain and postprandial vomiting due to mechanical obstruction mostly at the level of the pylorus.

#### **DA40.1**

##### **Gastric fistula, acquired**

Acquired gastric fistula is an opening through the gastric wall and into the peritoneal cavity, into another organ and vessels that normally do not connect, or through the abdominal wall.

#### **DA40.2**

##### **Gastric volvulus**

Gastric volvulus is an uncommon clinical entity defined as an abnormal rotation (twisting) of all or part of the stomach by more than 180 degrees, creating a closed-loop obstruction of the flow of material through the stomach. It can result in incarceration and strangulation, with variable loss of blood supply.

Although rare in childhood, a wandering spleen may also be associated with gastric volvulus, because they share a common etiology: congenital absence of intraperitoneal visceral attachments.

#### **DA40.3**

##### **Gastric diverticulum**

Gastric diverticulum is a disorder having out-pouchings from the gastric wall.

**Exclusions:**           Congenital diverticulum of stomach (LB13)

**DA42****Gastritis**

Gastritis is an injury of gastric mucosa that involves epithelial damage, mucosal inflammation, and epithelial cell regeneration except for any epithelial defect. Gastritis is caused by various factors such as infectious agents, drugs, chemical agents, autoimmune reaction and others. Gastritis is diagnosed histopathologically and/or endoscopically. Gastritis is classified as acute and chronic phase by clinical course.

**Inclusions:** Gastroduodenitis

**DA42.0****Autoimmune gastritis**

A type of chronic atrophic gastritis restricted to gastric body mucosa, and characterised by a severe atrophy of the acid secreting glands and achlorhydria. This is usually associated with serum antiparietal cell antibody, with or without pernicious anaemia.

**Coding Note:** Code also the causing condition

**DA42.1****Helicobacter pylori induced gastritis**

Gastritis with Helicobacter pylori infection. H. pylori infection causes acute gastritis at first. Lasting the infection the gastric mucosa turns into chronic gastritis and atrophic gastritis, one of the risk factors of gastric adenocarcinoma(CJBAA).

**DA42.2****Eosinophilic gastritis**

**Coded Elsewhere:** Food-induced eosinophilic gastroenteritis (4A83.0)

**DA42.3****Lymphocytic gastritis**

Chronic gastritis characterised by a peculiar infiltration of benign lymphocytes into the glands and surface mucosa. Lymphocytic gastritis is associated with celiac disease, Helicobacter pylori (HP) gastritis, and varioliform gastritis.

**DA42.4****Allergic gastritis**

Gastritis due to allergic disorders, principally meaning acute gastritis that occurs secondary to food allergy. But this also includes allergic gastritis due to non-food substances and allergic gastritis due to non-IgE-mediated hypersensitivity. This includes gastroduodenitis and gastroenteritis.

**Exclusions:** Allergic eosinophilic gastritis (DA42.2)  
Food-induced eosinophilic gastroenteritis (4A83.0)

**DA42.40**

Allergic gastritis due to IgE-mediated hypersensitivity

**DA42.41**

Allergic gastritis due to non-IgE-mediated hypersensitivity

**DA42.4Y**

Other specified allergic gastritis

**DA42.4Z**

Allergic gastritis, unspecified

**DA42.5****Gastritis due to duodenogastric reflux**

Gastritis due to an excessive reflux of duodenal contents including bile into the stomach.

#### Diseases of duodenum (DA50-DA5Z)

This is a group of conditions characterised as being in or associated with the duodenum, the first portion of the small intestine.

**Coded Elsewhere:** Neoplasms of the duodenum

Structural developmental anomalies of duodenum (LB14)

Duodenal ulcer (DA63)

|             |                                                                                                                                                                         |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DA50</b> | <b>Acquired anatomical alterations of the duodenum</b><br>This group incorporates duodenal disorders principally due to acquired morphological changes of the duodenum. |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>DA51</b>   | <b>Duodenitis</b><br>Duodenitis is an injury of duodenal mucosa that involves epithelial damage and mucosal inflammation except for any epithelial defect. Duodenitis is caused by various factors such as high acid secretion, infectious agents, drugs, chemical agents and others. Gastric metaplasia (GM) is considered adaptive responses to hyperacidity. Helicobacter pylori can be colonized on GM epithelium, and induce duodenitis. Duodenitis is diagnosed histopathologically and/or endoscopically. Duodenitis is classified as acute and chronic phase by clinical course.<br><i><b>Inclusions:</b></i> Inflammation of duodenum<br><i><b>Exclusions:</b></i> Crohn disease (DD70) |
| <b>DA51.0</b> | <b>Helicobacter-pylori associated duodenitis</b><br>Duodenitis with Helicobacter pylori infection. H. pylori can be colonized on gastric metaplasia epithelium at bulb, and induce duodenitis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>DA51.1</b> | <b>Eosinophilic duodenitis</b><br>A disease characterised by eosinophilic infiltration of various layers of duodenum in the absence of any known cause of eosinophilia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>DA51.2</b> | <b>Lymphocytic duodenitis</b><br>Chronic duodenitis characterised by a dense infiltration of benign lymphocytes into the epithelium and lamina propria. Lymphocytic duodenitis may present early gluten-induced damage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                |                                                                                                                                                                                                                                                                                          |

|               |                                                           |                                                                                                                                                                                                                                                                                               |
|---------------|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DA52</b>   | <b>Vascular disorders of the duodenum</b>                 | This group incorporates vascular disorders principally affecting the blood vessels of the duodenum. They include vascular disorders of arteries, veins and capillaries that carry blood to and from the stomach.                                                                              |
| <b>DA52.0</b> | <b>Duodenal varices</b>                                   | Abnormally dilated veins developed as portosystemic shunts in the lining of duodenum in patients with portal hypertension. Once duodenal varices develop, they continue to grow, and bleeding from duodenal varices can be fatal.                                                             |
| <b>DA52.1</b> | <b>Angiodysplasia of duodenum</b>                         | Ectasia of duodenal submucosal veins and overlying mucosal capillaries. Most lesions are less than 10mm in size, and multiple lesions are frequent. On endoscopy, flat or slightly elevated, reddish, roundish or starry lesions are observed.                                                |
| <b>DA52.2</b> | <b>Arteriovenous malformation of duodenum</b>             | Arteriovenous malformation is a vascular lesion in which arteries and veins are tangled and not connected by capillaries. Dilated weak-walled blood vessels in the duodenum usually close to the inside surface. They appear as very red areas, and tend to bleed easily with minimal trauma. |
| <b>DA52.Y</b> | <b>Other specified vascular disorders of the duodenum</b> |                                                                                                                                                                                                                                                                                               |
| <b>DA52.Z</b> | <b>Vascular disorders of the duodenum, unspecified</b>    |                                                                                                                                                                                                                                                                                               |

| <b>DA60</b>    | <b>Gastric ulcer</b> <p>Gastric ulcer is defined as a distinct breach in the mucosa of the stomach as a result of caustic effects of acid and pepsin in the lumen. Histologically, gastric ulcer is identified as necrosis of the mucosa extending through the muscularis mucosae into the submucosa. In the endoscopic or radiological view, there is an appreciable depth of the lesion. When the break of epithelial lining is confined to the mucosa without penetrating through the muscularis mucosae, the superficial lesion is called 'erosion'.</p> <p><b>Inclusions:</b> Mucosal defect of the stomach<br/>Peptic ulcer of stomach</p> <p><b>Exclusions:</b> acute haemorrhagic erosive gastritis (DA42.72)<br/>Malignant neoplasms of stomach (2B72)</p> |
| <b>DA60.0</b>  | <b>Gastric erosion</b> <p>Gastric erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Gastric erosion may constitute a phase of ulcer development or accompany some forms of gastric ulcer.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>DA60.1</b>  | <b>Helicobacter pylori associated gastric ulcer</b> <p>Helicobacter pylori (H. pylori) is a gram-negative bacillus that is found in the mucous layer overlying gastric epithelium, within epithelial cells and attached to mucous cells, leading to inflammation. It accounts for the majority of gastric ulcer. H. pylori that involves the acid-producing mucosa of the stomach can lead to hypochlorhydria or achlorhydria, and subsequent gastric ulceration.</p> <p><b>Exclusions:</b> Helicobacter pylori associated and drug-induced gastric ulcer (DA60.2)</p>                                                                                                                                                                                              |
| <b>DA60.2</b>  | <b>Helicobacter pylori associated and drug-induced gastric ulcer</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>DA60.3</b>  | <b>Stress ulcer of stomach</b> <p>Stress ulcers of stomach are acute mucosal lesions occurring in critically ill patients that may result in acute upper gastrointestinal bleeding. They are usually superficial erosions but can develop into ulcers. Stress ulcers of stomach may develop anywhere within the stomach but are more likely to occur in fundic mucosa, which lines the body and fundus of the stomach.</p>                                                                                                                                                                                                                                                                                                                                          |

| <b>DA61</b>         | <p><b>Peptic ulcer, site unspecified</b></p> <p>Peptic ulcer is defined as a distinct breach in the mucosa of the gastrointestinal tract as a result of caustic effects of acid and pepsin in the lumen. A peptic ulcer may develop in any part of the gastrointestinal tract exposed to acid and pepsin. The most common locations are the stomach and duodenal bulb, but peptic ulcer may also develop in the oesophagus in gastro-oesophageal reflux diseases, and in the distal ileum as a result of a Meckel's diverticulum lined with heterotopic gastric mucosa.</p> |
| <b>DA62</b>         | <p><b>Anastomotic ulcer</b></p> <p>Anastomotic ulcer develops following gastric resection or other procedures, such as gastroenterostomy, that involve the anastomosis of the stomach to some other portion of the gastrointestinal tract. In such cases an ulcer develops near the stoma; it is almost invariably in the efferent limb of the intestine, not in the stomach.</p> <p><b>Exclusions:</b> Primary ulcer of small intestine (DA94.0)</p>                                                                                                                       |
| <b>DA62.0</b>       | <p><b>Anastomotic erosion</b></p> <p>Anastomotic erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Anastomotic erosion may constitute a phase of ulcer development or accompany some forms of anastomotic ulcer.</p>                                                                                                                                                                                                                                                                                                             |
| <b>DA62.1</b>       | <p><b>Helicobacter pylori associated anastomotic ulcer</b></p> <p>Helicobacter pylori associated anastomotic ulcer is an ulcer at the anastomosis that is associated with Helicobacter pylori infection. Helicobacter pylori infection is considered as one of the risk factors for anastomotic ulcer.</p>                                                                                                                                                                                                                                                                  |

| <b>DA63</b>   | <b>Duodenal ulcer</b><br>Duodenal ulcer is defined as a distinct breach in the mucosa of the duodenum as a result of caustic effects of acid and pepsin in the lumen. Histologically, duodenal ulcer is identified as necrosis of the mucosa extending through the muscularis mucosae into the submucosa. In the endoscopic or radiological view, there is an appreciable depth of the lesion. When the break of epithelial lining is confined to the mucosa without penetrating through the muscularis mucosae, the superficial lesion is called 'erosion'.<br><br><b>Exclusions:</b> Anastomotic ulcer (DA62) |
| <b>DA63.0</b> | <b>Duodenal erosion</b><br>Duodenal erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Duodenal erosion may constitute a phase of ulcer development or accompany some forms of duodenal ulcer.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>DA63.1</b> | <b>Helicobacter-pylori associated duodenal ulcer</b><br>Helicobacter pylori (H. pylori) is a gram-negative bacillus that is found in the mucous layer overlying gastric epithelium, within epithelial cells and attached to mucous cells, leading to inflammation. In the case of duodenal ulcers, H. pylori is believed to infect the gastric antrum or ectopic gastric mucosa in the duodenum. This is associated with increased acid production and duodenal ulceration.                                                                                                                                     |
| <b>DA63.2</b> | <b>Helicobacter-pylori associated and drug-induced duodenal ulcer</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>DA63.3</b> | <b>Stress ulcer of duodenum</b><br>Stress ulcers of duodenum are acute mucosal lesions occurring in critically ill patients that may result in acute upper gastrointestinal bleeding. They are usually superficial erosions but can develop into ulcers.                                                                                                                                                                                                                                                                                                                                                        |

**DA7Z**
**Diseases of the stomach or the duodenum, unspecified**

## Diseases of small intestine (DA90-DA9Z)

This is a group of conditions characterised as being in or associated with the small intestine.

**Exclusions:** Ileostomy malfunction (DE12.0)

Diseases of duodenum (DA50-DA5Z)

**Coded Elsewhere:** Neoplasms of the small intestine

Foreign body in small intestine (ND73.3)

Structural developmental anomalies of small intestine (LB15)

### DA90

#### Nonstructural developmental anomalies of small intestine

Any congenital defect of small intestine that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some becomes evident later.

**Coded Elsewhere:** Maltase-glucoamylase deficiency (5C61.1)

Congenital sucrase-isomaltase deficiency (5C61.2)

Alpha, alpha trehalase deficiency (5C61.3)

Congenital lactase deficiency (5C61.61)

### DA90.0

#### Syndromic diarrhoea

Syndromic diarrhoea (SD), also known as phenotypic diarrhoea (PD) or tricho-hepato-enteric syndrome (THE), is a congenital enteropathy presenting with early-onset of severe diarrhoea requiring parenteral nutrition (PN), associated with facial dysmorphism, woolly and poorly pigmented hair and liver disease, with extensive fibrosis or cirrhosis, in about half of the patients.

**Inclusions:** Phenotypic diarrhoea

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>DA96.00</b> | <p>Bacterial overgrowth syndrome</p> <p>Bacterial overgrowth syndrome is a term that describes clinical manifestations that occur when poor movement of intestinal contents allows certain normal intestinal bacteria to grow excessively, causing diarrhoea and poor absorption of nutrients (malabsorption). Various etiological processes can disrupt mechanisms that keep the number of these bacteria low. These include structural abnormalities (congenital or surgical) and disorders that cause decreased gastric acidity, reduced peristaltic activity, and mucosal damage or atrophy.</p> <p><b>Coded Elsewhere:</b> Bowel-associated dermatosis-arthritis syndrome (EB2Y)</p>                                                                                                                                     |
| <b>DA96.01</b> | <p>Tropical sprue</p> <p>Tropical sprue is a syndrome involving the entire small intestine that causes acute or chronic diarrhoea and malabsorption of nutrients of progressive severity that results in malnutrition and anaemia due to folic acid deficiency. The disorder occurs only among persons (mostly adults) who visit, or are residents of, certain tropical and subtropical areas. Histological changes consist of lengthening of the crypt area and broadening and shortening of the villi with chronic inflammation of small intestine. The cause of tropical sprue is not known, but excess levels of certain types of bacteria in the small intestines have been suggested, and antimicrobial therapy may result in cure of the intestinal abnormalities.</p> <p><b>Inclusions:</b> Tropical steatorrhoea</p> |
| <b>DA96.02</b> | <p>Malabsorption or intolerance of specific nutrients</p> <p>Food intolerance is a term used for difficulty in digesting a food due to various physiological responses associated with a particular food, or compound found. Food intolerance should not be mistaken for food allergy, which is primarily involving the immune reaction against the food.</p> <p><b>Coded Elsewhere:</b> Lactose intolerance (5C61.6)</p>                                                                                                                                                                                                                                                                                                                                                                                                     |

**DA98****Polyps of small intestine**

Polyps of small intestine are benign mushroom-like abnormalities of the small intestine that may have a stalk or be flat with a stalk. (Polyps of small intestine are any mass of tissue that arises from the small intestinal wall and protrudes into the lumen.)

**Exclusions:** Adenoma of small intestine (2E92.3)  
Adenomatous polyp of small intestine (2E92.3)  
Polyposis syndrome (2E92.40)

**DA98.0****Hamartoma of small intestine**

Hamartoma of small intestine is a non-neoplastic mass of indigenous tissue in the small intestine.

**DA98.1****Hyperplastic polyp of small intestine**

Hyperplastic/metaplastic polyps of small intestine usually result from the abnormal maturation of the mucosal cells of the small intestines and are usually of small size.

**DA98.2****Inflammatory fibroid polyp of small intestine**

Inflammatory fibroid polyp (IFP) is a rare tumour and it presents either as a solitary large or sessile lesion that arises in the submucosa. It is characterised by spindle and stellate cells set in an inflammatory, myxoid stroma.

**DA98.3****Lymphoid hyperplasia of small intestine**

Lymphoid hyperplasia of small intestine is a formation of well differentiated lymphoid tissue due to enhanced cell division in the small intestinal mucosa.

**DA98.Y****Other specified polyps of small intestine****DA98.Z****Polyps of small intestine, unspecified****DA9Y****Other specified diseases of small intestine****DA9Z****Diseases of small intestine, unspecified****Diseases of appendix (DB10-DB1Z)**

**Coded Elsewhere:** Neoplasms of the appendix

**DB10****Appendicitis**

Appendicitis is a condition characterised by inflammation of the vermiform appendix.

**DB10.0****Acute appendicitis**

Acute inflammation and enlargement of the vermiform appendix. It has been recognised as one of the most common causes of severe acute abdominal pain worldwide. Most cases require appropriate medical treatment or removal of the inflamed appendix. If untreated, mortality is high, mainly because of the risk of rupture leading to peritonitis and shock. In this category acute appendicitis only due to common bacterial infection is included, and appendicitis due to specific organisms is ruled out from here, and described elsewhere.

| <b>DB11.2</b> | <b>Appendicular concretions</b><br>A condition of the appendix filled with calcification                                                                                                                                                                      |
| <b>DB11.3</b> | <b>Diverticulum of appendix, acquired</b><br>A condition of an outpouching of a hollow structure of the appendix.                                                                                                                                             |
| <b>DB11.4</b> | <b>Fistula of appendix</b><br>A condition of an abnormal passageway between the appendix and neighbour organs.                                                                                                                                                |
| <b>DB11.5</b> | <b>Intussusception of appendix</b><br>A condition in which a part of the appendix has invaginated into another section of the appendix. Complete invagination of the appendix into the caecum may progress to a colo-colic and/or ileo-colic intussusception. |
| <b>DB11.6</b> | <b>Mucocele of appendix</b><br>Mucocele of the appendix is a cystic, dilated appendix filled with mucin. Simple mucocele is not a neoplasm and results from chronic obstruction of the proximal lumen, usually by fibrous tissue.                             |
| <b>DB1Y</b>   | <b>Other specified diseases of appendix</b>                                                                                                                                                                                                                   |
| <b>DB1Z</b>   | <b>Diseases of appendix, unspecified</b>                                                                                                                                                                                                                      |

## Diseases of large intestine (DB30-DB3Z)

**Coded Elsewhere:** Neoplasms of the large intestine

Structural developmental anomalies of large intestine (LB16)

Diverticular disease of large intestine (DC80-DC82.Z)

Polyposis syndrome (2E92.40)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DB30</b>   | <b>Obstruction of large intestine</b><br>Hindrance of the passage of luminal contents in the large intestine. Obstruction of the large intestine can be partial or complete, and caused by intrinsic or extrinsic factors. Simple obstruction is associated with diminished or stopped flow of luminal contents. Strangulating obstruction is associated with impaired blood flow to the large intestine in addition to obstructed flow of luminal contents.<br><b>Exclusions:</b> Paralytic ileus of large intestine (DA93.0) |
| <b>DB30.0</b> | <b>Intussusception of the large intestine</b><br>Intussusception occurs when a segment of bowel invaginates, or telescopes, into adjacent distal bowel, leading to obstruction and possibly ischemic injury. Colonic intussusception is a relatively uncommon condition that is most frequent in the early years of life. There are three main varieties: caecocolic, colocolic and sigmoidrectal.                                                                                                                             |

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DB30.1</b> | <b>Volvulus of large intestine</b><br>A volvulus is an abnormal twisting of the intestine around the axis of its own mesentery, resulting in obstruction of the more proximal bowel. Twisting of the mesentery may involve the mesenteric vessels and so make the involved loop particularly susceptible to strangulation and gangrene, with resulting perforation, peritonitis, and sepsis. The classical sites of large intestinal volvulus are the caecum and the sigmoid colon, although there are reports of volvulus of the transverse colon and the splenic flexure. |
| <b>DB30.2</b> | <b>Adhesions of large intestine with obstruction</b><br>Large bowel obstruction resulting from intraabdominal adhesion due to laparotomy, trauma, and intraabdominal inflammation such as endometriosis.                                                                                                                                                                                                                                                                                                                                                                    |
| <b>DB30.3</b> | <b>Impaction of large intestine</b><br>Large bowel obstruction may result when a substance such as gallstone, foreign body, or enterolith, but not faecal, is too large to traverse the large intestine.<br><br><i>Inclusions:</i> Impaction of large bowel<br><i>Exclusions:</i> faecal impaction (ME05.0)                                                                                                                                                                                                                                                                 |
| <b>DB30.4</b> | <b>Stenosis of the rectum</b><br>Rectal stenosis is defined as narrowing of the rectum.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>DB30.Y</b> | <b>Other specified obstruction of large intestine</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>DB30.Z</b> | <b>Obstruction of large intestine, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>DB31</b>   | <b>Other acquired anatomical alterations of large intestine</b><br>This group incorporates acquired large intestinal disorders principally due to morphological changes of the colon and rectum. Diverticular diseases and obstruction of large intestine are classified in GB a GD, respectively.<br><br><i>Exclusions:</i> Obstruction of large intestine (DB30)<br>Diverticular disease of large intestine (DC80-DC82.Z)<br><br><i>Coded Elsewhere:</i> Perforation of large intestine (ME24.31)<br>Endometriosis of large intestine (GA10.C1)                           |
| <b>DB31.0</b> | <b>Fistula of large intestine</b><br>Fistula of large intestine is defined as an abnormal communication between the large intestine and another epithelialized surface such as the skin, an adjacent organ or an adjacent loop of bowel. Colovesical fistula is the most common, but colovaginal, colocolic, coloileal, colocutaneous, and coloanal fistulae have been described. Fistulas due to Crohn disease are excluded from here.<br><br><i>Coded Elsewhere:</i> Fistula of large intestine to vagina (GC04.12)<br>Rectovaginal fistula (GC04.16)                     |
| <b>DB31.1</b> | <b>Pneumatosis intestinalis of large intestine</b><br>This refers to pneumatosis intestinalis in the large intestine, which is a condition characterised by multiple, gas-filled cysts, typically within the subserosa and submucosa of the intestine.                                                                                                                                                                                                                                                                                                                      |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>DB32</b>    | <b>Motility disorders of large intestine</b><br>Disorders of colonic motility due to abnormal contractions, such as spasms and colonic paralysis. The loss of ability to coordinate motor activity may cause a variety of disorders including colonic distention and severe constipation.<br><b>Coded Elsewhere:</b> Paralytic ileus of large intestine (DA93.0)<br>Paralytic ileus of small intestine or colon (DA93.0)                                                                                                                                                                                |
| <b>DB32.0</b>  | <b>Pseudo-obstruction of colon</b><br>Colonic pseudo-obstruction is a rare condition with symptoms of decreased ability of the colon to push fluid, food and air through like those caused by a colonic obstruction, or blockage. The clinical and radiological findings are often similar to true obstruction, but no true mechanical blockage is found. The symptoms generally includes dyspepsia, chronic constipation and, in the moments where appear abdominal colic. Ogilvie syndrome: acute pseudoobstruction of the colon in severely ill debilitated patients is included here as acute form. |
| <b>DB32.1</b>  | <b>Slow transit constipation</b><br>Slow transit constipation (STC) typically involves the unusually slow passage of luminal contents through the large intestine. This can lead to chronic problems, such as constipation and uncontrollable soiling and could require colectomy.                                                                                                                                                                                                                                                                                                                      |
| <b>DB32.2</b>  | <b>Megacolon</b><br>Megacolon is a descriptive term indicating an abnormal dilation of large intestine. The dilatation is often accompanied by a paralysis of the peristaltic movements of the bowel.<br><b>Coding Note:</b> Code also the causing condition<br><b>Exclusions:</b> Congenital megacolon (LB16.1)<br>Hirschsprung disease (LB16.1)                                                                                                                                                                                                                                                       |
| <b>DB32.20</b> | <b>Toxic megacolon</b><br>Toxic megacolon is an acute form of colonic distension characterised by a very dilated colon, accompanied by abdominal distension (bloating), and sometimes fever, abdominal pain, or shock. "Toxic" means that this complication occurs with inflammation. Toxic megacolon is a rare, life-threatening widening of the large intestine that occurs within a few days, occurring as a complication of inflammatory bowel disease, such as ulcerative colitis and Crohn disease.<br><b>Coding Note:</b> Code also the causing condition                                        |

| <b>DB33.2</b>  | <b>Allergic or dietetic colitis</b><br>Colitis and proctitis due to allergic disorders including food allergy. This category includes both immediate-type (IgE mediated) and non-IgE-mediated colonic hypersensitivity, and eosinophilic disorders of large intestine. Food protein-induced proctitis/colitis of infants is also included here.                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>DB33.20</b> | Food protein-induced proctitis or colitis of infants<br>A non-IgE-mediated intestinal hypersensitivity (in the absence of IgE antibodies) induced by food protein that induces inflammatory response mainly to the rectum and distal sigmoid colon. This is a condition in infants that results from an immune response triggered by proteins in the diet mainly milk (through breast-feeding). Patients usually appear healthy and have normal, soft stools that contain flecks or streaks of blood. The diagnosis is usually made based upon the resolution of symptoms upon withdrawal of the presumed food antigen. The usual onset is in the first 2 months of life but it also occurs in infants from 1 day to 6 months of age. |
| <b>DB33.2Y</b> | Other specified allergic or dietetic colitis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**DB33.Y**                    **Other specified noninfectious colitis or proctitis**

**DB33.Z**                    **Certain noninfectious colitis or proctitis, unspecified**

**DB34**                    **Certain vascular disorders of large intestine**

The whole large intestine receives its blood supply from colonic branches of the superior mesenteric artery and the inferior mesenteric artery, and the venous drainage is through the portal system via the superior and inferior mesenteric vein. Vascular disorders includes lesions in these vessels and capillary.

**Exclusions:**            Ischaemic vascular disorders of intestine (DD30-DD3Z)

**Coded Elsewhere:** Ischaemic colitis (DD31.00)

Vascular disorders of large intestine due to injury or trauma  
(NB90.Y)

**DB34.0**                    **Angiodysplasia of colon**

Small dilated submucosal vessels of colonic mucosa with perforating vessels going through the muscularis mucosae.

**DB34.1**                    **Arteriovenous malformation of large intestine**

Vascular malformations of large intestine that result from a localised maldevelopment of part of the primitive vascular plexus and consist of abnormal arteriovenous communications without intervening capillaries. They vary in size, ranging from massive lesions that are fed by multiple vessels to lesions so small that they are hard to identify at arteriography, surgery, or autopsy, but relatively larger than angiodysplasia.

**DB34.2**                    **Vasculitis of large intestine**

**DB34.3**                    **Varices of large intestine**

Abnormally dilated veins in the lining of large intestine. Intestinal varices represent varices at an unusual site in patients with cirrhosis and portal hypertension.

**DB34.4**                    **Acute haemorrhagic rectal ulcer**

Acute haemorrhagic rectal ulcer is regarded as an acute ischemic mucosal disorder that occurs in elderly patients who are suffering from incipient blood flow reduction due to arteriosclerotic factors. These patients are often bedridden, and this causes a decrease in mucosal blood flow in the lower rectum, which in turn triggers this pathology.

**DB34.Y**                    **Other specified vascular disorders of large intestine**

**DB34.Z**                    **Vascular disorders of large intestine, unspecified**

**DB35**                    **Polyp of large intestine**

Polyps are abnormal growths rising from the lining of the large intestine that protrude into the intestinal lumen. Polyps can cause bleeding, and over time, can develop into cancers.

**Exclusions:**            Polyposis syndrome (2E92.40)

Malignant neoplasms of colon (2B90)

**Coded Elsewhere:** Adenomatous polyp of the colon (2E92.4Y)

## Diseases of anal canal (DB50-DB7Z)

**Coded Elsewhere:** Neoplasms of the anal canal  
Structural developmental anomalies of anal canal (LB17)

### Acquired anatomical alterations of the anal canal (DB50-DB5Z)

This group incorporates disorders principally due to morphological changes of the anus and anal canal.

**Exclusions:** congenital anomalies of the anal canal (LB17)  
Anal abscess (DB70.00)

**Coded Elsewhere:** Haemorrhage of anus and rectum (ME24.A1)  
Crohn disease of anal region (DD70.4)  
Open wound of anus (NB51.Z)

**DB50** **Fissure or fistula of anal regions**  
Anal fissure and fistula are the common disorders of anal regions. An anal fissure is a superficial linear tear in the anoderm that is distal to the dentate line. An anal fistula is an inflammatory tract between the anal canal and the skin.

|               |                                                                                                                                                                                                                                                                                                                                                  |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DB50.0</b> | <b>Anal fissure</b><br>An anal fissure is a linear break or tear in the mucosa that lines the anal canal. It may occur when hard or large stools are passed after defecation and typically cause pain and bright red anal bleeding.                                                                                                              |
| <b>DB50.1</b> | <b>Anal fistula</b><br>Anal fistula is an abnormal communication, hollow tract lined with granulation tissue connecting the primary opening inside the anal canal to a secondary opening in the perineal skin. They are usually associated with anorectal abscesses, and they are thought to be a chronic condition after an abscess evacuation. |
| <b>DB50.2</b> | <b>Anorectal fistula</b>                                                                                                                                                                                                                                                                                                                         |

## Haemorrhoids or perianal venous conditions (DB60-DB6Z)

Haemorrhoids are anatomical structures of swollen veins of the rectal plexus in the walls of the anal canal and/or under the skin around the anus. The term haemorrhoids is usually related to the symptoms caused by haemorrhoids resulting in bleeding and painful swelling when they become enlarged, inflamed, thrombosed, or prolapsed. Haemorrhoids are classified according to the degree of prolapse, although this may not always reflect the severity of symptoms.

**Inclusions:** varicose veins of anus and rectum

### DB60

#### Haemorrhoids

A prolapse of vascular cushions resulting in bleeding and painful swelling in the anal canal. Internal haemorrhoids are swollen veins inside the anal canal and one in a vein of the superior rectal plexus, originating above the pectinate line and covered by mucous membrane.

Internal haemorrhoids are classified according to the degree of prolapse, although this may not always reflect the severity of symptoms.

**Inclusions:** piles

**Coded Elsewhere:** Haemorrhoids in pregnancy (JA61.4)

Haemorrhoids in the puerperium (JB41.2)

### DB60.0

#### First degree haemorrhoids

(grade I): First-degree haemorrhoids bulge into the anal canal and sometimes bleed, but do not prolapse through the anus.

**Inclusions:** Haemorrhoids (bleeding) without prolapse outside of anal canal

### DB60.1

#### Second degree haemorrhoids

(grade II): Second-degree haemorrhoids prolapse from the anus during bowel movements but then withdraw back up into the anal canal, spontaneously.

**Inclusions:** Haemorrhoids (bleeding) that prolapse with straining, but retract spontaneously

### DB60.2

#### Third degree haemorrhoids

(grade III): Third-degree haemorrhoids remain prolapsed unless pushed gently back into the anal canal, and they can be reduced manually.

**Inclusions:** Haemorrhoids (bleeding) that prolapse with straining, and require manual reduction back inside the anal canal

### DB60.3

#### Fourth degree haemorrhoids

(grade IV): Fourth-degree haemorrhoids cannot be pushed back into the anal canal and permanently prolapsed.

**Inclusions:** Haemorrhoids (bleeding) with prolapsed tissue that cannot be manually reduced

### DB60.Z

#### Haemorrhoids, unspecified

**DB61****Perianal venous thrombosis**

Extremely painful cherry like lesions under the perianal skin containing clotted blood have been attributed to rupture of a blood vessel with haematoma. However, histology confirmed that these lesions are thrombi lying within the thin-walled vessels of the external anal plexus.

**Inclusions:** perianal thrombosis  
Perianal haematoma (nontraumatic)

**DB62****Residual haemorrhoidal skin tags**

This refers to residual small benign tumours that form primarily in areas where the skin forms creases, especially in the anal canal which help with stool control.

**DB6Y****Other specified haemorrhoids or perianal venous conditions****DB6Z****Haemorrhoids or perianal venous conditions, unspecified****DB70****Infections of the anal region**

Infections of anal canal caused by various microorganisms including bacteria, virus, fungus, parasite and the other specified agents.

**Coded Elsewhere:** Anal warts (1A95.0)  
Primary anal syphilis (1A61.1)  
Herpes simplex infection of perianal skin or rectum (1A94.1)  
Gonococcal infection of anus (1A72.2)  
Infections of the anus or perianal skin (EG61)  
Tuberculosis of anal canal (1B12.7)

**DB70.0****Abscess of anal regions**

A condition of the anal and rectal region, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the anal or rectal region.

**Coded Elsewhere:** Ischiorectal abscess (DB36.11)

**DB70.00****Anal abscess**

A condition of the anus, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the perianal crypts or glands. This condition may present with pain and swelling in the perianal region, or fever. Confirmation is commonly by rectal examination.

**Inclusions:** Perianal abscess  
**Exclusions:** Intraspincteric abscess (DB70.02)  
Streptococcal cellulitis of skin (1B70.1)  
Staphylococcal cellulitis of skin (1B70.2)

**DB70.01****Anorectal abscess**

## Diseases of liver (DB90-DB9Z)

**Exclusions:** Unspecified jaundice (ME10.1)

**Coded Elsewhere:** Neoplasms of the liver

Structural developmental anomalies of liver (LB20.0)

Metabolic or transporter liver disease (5C90)

Viral hepatitis (1E50-1E5Z)

### DB90

#### Infectious liver disease

**Exclusions:** Viral hepatitis (1E50-1E5Z)

**Coded Elsewhere:** Dengue (1D20-1D2Z)

Yellow fever (1D47)

Cytomegaloviral hepatitis (1D82.0)

Hepatitis due to *Toxoplasma gondii* (1F57.0)

Herpes simplex hepatitis (1F00.Y)

### DB90.0

#### Abscess of liver

A condition of the liver, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the liver. This condition may present with fever, abdominal pain, or shock. Confirmation is by advanced imaging or ultrasonography.

**Exclusions:** pylephlebitis without liver abscess (DB98.3)

**Coded Elsewhere:** Amoebic liver abscess (1A36.10)

### DB90.Y

#### Other specified infectious liver disease

### DB90.Z

#### Infectious liver disease, unspecified

**DB91****Acute or subacute hepatic failure**

Acute and subacute liver failure is characterised by onset of coagulopathy and/or hepatic encephalopathy within 8 weeks of onset of symptoms in a patient without previously known liver diseases.

**Exclusions:**

- Chronic viral hepatitis (1E51)
- Alcoholic hepatitis (DB94.1)
- Alcoholic cirrhosis of liver with hepatic encephalopathy (DB94.3)
- Hepatic failure complicating abortion, ectopic or molar pregnancy (JA00-JA0Z)
- Icterus of fetus and newborn (KA87)
- Non-alcoholic fatty liver disease with hepatic encephalopathy (DB92)
- Chronic hepatic failure due to portosystemic shunt (DB98)
- Drug-induced or toxic liver disease (DB95)
- Hepatic encephalopathy (DB97)
- Liver disorders in pregnancy, childbirth or the puerperium (JA65.0)

**DB91.0****Acute or subacute hepatic failure due to hepatitis virus**

Acute infection of hepatitis A, B, C, D and E viruses can cause acute and subacute hepatic failure. The prognosis varies depending on the virus.

**DB91.1****Other acute or subacute hepatic failure**

Other causes of acute and subacute hepatic failure are drugs, toxic agents, metabolic diseases (particularly Wilson's disease), ischemic diseases, autoimmune hepatitis, and unknown diseases.

**DB91.Z****Acute or subacute hepatic failure, unspecified****DB92****Non-alcoholic fatty liver disease**

NAFLD is characterised by fatty liver related to insulin resistance in the absence of significant alcohol consumption. It embraces a pathological spectrum from simple steatosis to steatohepatitis. 10-20% of cases have steatohepatitis (non-alcoholic steatohepatitis: NASH), which can progress to cirrhosis and hepatocellular carcinoma.

**Exclusions:**

- Reye syndrome (8E46)
- Acute fatty liver of pregnancy (JA65.0)
- Drug-induced or toxic liver disease (DB95)
- Chronic hepatitis C (1E51.1)
- Alcoholic liver disease (DB94)
- inherited defects in mitochondrial metabolism (5C53)

**DB92.0****Non-alcoholic fatty liver disease without non-alcoholic steatohepatitis**

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|               | Non-alcoholic steatohepatitis (NASH) is a histological form of Non-alcoholic fatty liver disease (NAFLD) in which the key features are histological evidence of hepatocyte injury (such as ballooning or Mallory hyaline) and substantial lobular inflammation. NASH is often associated with fibrosis in pericentral and perisinusoidal distribution (a portal fibrosis pattern also exists, particularly in children). NASH is the clinically progressive form of NAFLD with clinical outcomes including cardiovascular events, and cirrhosis or hepatocellular carcinoma. While novel biomarkers for NASH have been reported, histology remains the gold standard for diagnosis.                                                                                                                                    |
| <b>DB92.Y</b> | <b>Other specified non-alcoholic fatty liver disease</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|               | <p>Hepatic Fibrosis is defined as an excess deposition of the components of extracellular matrix (i.e. collagens, glycoproteins, proteoglycans) within the liver. This response to liver injury potentially is reversible. In contrast, in most patients, cirrhosis is not a reversible process.</p> <p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>hepatic sclerosis</li> <li>hepatic fibrosis with hepatic sclerosis</li> </ul> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Alcoholic liver fibrosis (DB94.2)</li> <li>Congenital hepatic fibrosis (LB20.00)</li> <li>Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver (DB95.5)</li> </ul> <p><b>Coded Elsewhere:</b> Hepatic fibrosis due to Schistosomiasis without portal hypertension (1F86.Z)</p> |

**DB93.1            Hepatic cirrhosis**

Hepatic (liver) cirrhosis is the end stage of fibrosis of the liver caused by many kinds of liver diseases and conditions. Diffuse nodulation of liver due to fibrous bands subdividing liver into regenerative nodules. Blood vessels reach outflow through resistant collagen which contributes to the portal hypertension. Liver cirrhosis is usually irreversible. Some patients with cirrhosis in the early stage are asymptomatic, and other patients in the advanced stage showed signs and symptoms caused by decreased hepatic synthetic function, portal hypertension or decreased detoxification function.

**Coding Note:**    Code also the causing condition

**Exclusions:**            Alcoholic cirrhosis of liver without hepatitis (DB94.3)  
                              Alcoholic hepatitis with cirrhosis (DB94.10)  
                              Congenital cirrhosis of liver (KB80-KB8Z)  
                              Secondary biliary cirrhosis (DB93)  
                              Cardiac fibrosis and cirrhosis of liver (DB98.8)  
                              Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver (DB95.5)

**DB93.2            Certain specified fibrosis or cirrhosis of liver**

This is other formation of excess fibrous connective tissue in an organ or tissue in a reparative or reactive process and chronic liver disease characterised by replacement of liver tissue by fibrosis, scar tissue and regenerative nodules.

**Inclusions:**            Biliary cirrhosis, unspecified

**Coded Elsewhere:** Joubert syndrome with hepatic defect (LD20.0Y)

**DB93.20           Hereditary North American Indian childhood cirrhosis**

Hereditary North American Indian childhood cirrhosis is a severe autosomal recessive intrahepatic cholestasis that has only been described in aboriginal children from northwestern Quebec. Manifesting first as transient neonatal jaundice, the disease evolves into periportal fibrosis and cirrhosis during a period ranging from childhood to adolescence.

**DB93.21           Idiopathic copper-associated cirrhosis**

Idiopathic copper-associated cirrhosis is a rare copper-overload liver disease characterised by a rapidly progressive liver cirrhosis from the first few years of life leading to hepatic insufficiency and harbouring a specific pathological aspect: pericellular fibrosis, inflammatory infiltration, hepatocyte necrosis, absence of steatosis, poor regeneration and histochemical copper staining.

**DB93.Y            Other specified hepatic fibrosis or cirrhosis**

**DB94****Alcoholic liver disease**

Alcoholic liver disease is damage to the liver and its function due to excessive intake of alcohol over a prolonged period of time. The diagnosis is made by a history of excessive intake of alcohol and exclusion of other causes of liver disease. However, it is important to note that excessive alcohol intake interacts with other causes of chronic liver disease to worsen the pathological severity and clinical outcome; important (relatively common) examples are with chronic hepatitis C, obesity and diabetes-related fatty liver, and haemochromatosis.

**DB94.0****Alcoholic fatty liver**

Alcoholic fatty liver is abnormal retention of lipids in liver cells evident as stainable fat (steatosis) due to excessive intake of alcohol. It is the earliest stage of alcoholic liver disease. It is difficult to histologically distinguish alcoholic fatty liver from non-alcoholic fatty liver. Diagnosis is dependent on history of level of alcohol intake (see definition of NAFLD (Non-alcoholic fatty liver disease)).

**DB94.1****Alcoholic hepatitis**

Alcoholic hepatitis is injury and inflammation of the liver caused by excessive intake of alcohol. It is characterised by infiltration by neutrophils, ballooning degeneration of hepatocytes and deposit of Mallory hyaline bodies. Alcoholic hepatitis often occurs concomitantly in patients with other forms of alcoholic liver disease such as fatty liver (alcoholic steatohepatitis), liver fibrosis and cirrhosis.

**DB94.10****Alcoholic hepatitis with cirrhosis**

This is an inflammation of the liver due to excessive intake of alcohol, consequence of liver disease characterised by replacement of liver tissue by fibrosis, scar tissue and regenerative nodules.

**DB94.1Y****Other specified alcoholic hepatitis****DB94.1Z****Alcoholic hepatitis, unspecified****DB94.2****Alcoholic liver fibrosis**

Alcoholic fibrosis of liver is defined as an excess deposition of the collagens and extracellular matrix within the liver as evident histologically, caused by excessive intake of alcohol.

**Inclusions:**

Alcoholic sclerosis of liver

**DB94.3****Alcoholic cirrhosis of liver without hepatitis**

Alcoholic cirrhosis is an advanced pathological stage of alcoholic liver disease characterised by diffuse fibrosis that links portal tracts and central veins, distortion of the hepatic architecture and the formation of regenerative nodules. It often occurs with alcoholic hepatitis.

**Exclusions:**

Alcoholic hepatitis with cirrhosis (DB94.10)

**DB94.Y****Other specified alcoholic liver disease****DB94.Z****Alcoholic liver disease, unspecified**

**DB95****Drug-induced or toxic liver disease**

Drug-induced and toxic liver disease is hepatotoxicity as injury to the liver that is associated with impaired liver function caused by exposure to a drug or another noninfectious agent.

**Exclusions:** Budd-Chiari syndrome (DB98.5)  
Alcoholic liver disease (DB94)

- DB95.0 Drug-induced or toxic liver disease with acute hepatic necrosis or acute hepatitis**  
This is an acute hepatocellular injury that develops within 1 to 20 weeks after starting treatment. The histological lesions consist mainly of focal, zonal or bridging necrosis, but lobular and portal tract inflammation evident with drug hepatitis. Extrahepatic features of drug hypersensitivity, including rash, lymphadenopathy, eosinophilia or other systemic features, are observed in some cases.
- DB95.1 Drug-induced or toxic liver disease with chronic hepatitis**  
This is the chronic form of drug-induced liver injury that almost always depends on continued exposure to the agent, and is characterised by interface hepatitis, bridging necrosis, and fibrosis.
- DB95.10** Drug-induced or toxic liver disease with chronic hepatitis with cirrhosis  
This is the chronic form of drug-induced liver injury characterised by interface hepatitis, bridging necrosis and fibrosis, with the development of cirrhosis.
- DB95.11** Drug-induced or toxic liver disease with chronic hepatitis without cirrhosis
- DB95.1Y** Other specified drug-induced or toxic liver disease with chronic hepatitis
- DB95.1Z** Drug-induced or toxic liver disease with chronic hepatitis, unspecified
- DB95.2 Drug-induced or toxic liver disease with cholestasis**  
This is a drug-induced cholestatic liver injury where the symptoms of pruritus and jaundice are often prominent, and elevated serum alkaline phosphatase is the dominant biochemical finding.  
**Inclusions:** Cholestasis with hepatocyte injury
- DB95.20** Chronic drug-induced or toxic liver disease with cholestasis  
This is a chronic cholestasis defined by persistence of drug-induced cholestatic liver injury for more than 3 months.
- DB95.2Y** Other specified drug-induced or toxic liver disease with cholestasis
- DB95.2Z** Drug-induced or toxic liver disease with cholestasis, unspecified
- DB95.3 Drug-induced or toxic liver disease with fatty liver**  
This is a drug-induced fatty liver that consists of three types of steatosis, including microvesicular steatosis, macrovesicular steatosis, and phospholipidosis.

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DB95.30</b> | <p>Drug-induced or toxic liver disease with chronic fatty liver disease</p> <p>This is a chronic drug-induced steatosis characterised by relatively large triglyceride globules, which effectively fill the hepatocyte, displace the nucleus and other intracellular constituents to the periphery. Some patients show steatohepatitis, steatosis with focal necrosis and inflammatory cell infiltrate, leading to the development of cirrhosis.</p> |

| <b>DB98.5</b>  | <p><b>Budd-Chiari syndrome</b></p> <p>Budd-Chiari syndrome is caused by obstruction of hepatic venous outflow involving either the hepatic veins or the terminal segment of the inferior vena cava and leading to hepatic congestion and ischemic necrosis. Severity depends on the speed of onset and extent of the obstruction.</p> <p>Obstructions are generally caused by thrombosis in primary BCS, while secondary BCS results from tumour invasion into the lumen or compression of the vein by an expansive lesion. The principle manifestations of BCS are ascites leading to undernutrition and renal insufficiency, gastrointestinal haemorrhage due to portal hypertension, and hepatic insufficiency resulting in encephalopathy and severe infections. Asymptomatic forms have also been reported.</p> |
| <b>DB98.6</b>  | <p><b>Hepatic veno-occlusive disease</b></p> <p>Hepatic veno-occlusive disease (hepatic VOD) is a liver disease resulting from toxic injury to the hepatic sinusoidal capillaries that leads to obstruction of the small hepatic veins. The clinical picture is characterised by painful hepatomegaly, jaundice, oedemas, and ascites.</p> <p><b>Exclusions:</b> Budd-Chiari syndrome (DB98.5)</p> <p>Hepatic veno-occlusive disease - immunodeficiency syndrome (4A01.33)</p>                                                                                                                                                                                                                                                                                                                                       |
| <b>DB98.7</b>  | <p><b>Portal hypertension</b></p> <p>Portal hypertension is abnormal increase of portal vein pressure, which induces development of collateral vessels of portal vein including oesophageal and cardiac varices. It also contributes to development of ascites.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>DB99.5</b>       | <b>Hepatic encephalopathy</b><br>Hepatic encephalopathy is a complication of liver cirrhosis and a hallmark of acute liver failure, and is also observed in patients with portosystemic shunts without cirrhosis. Hepatic encephalopathy is characterised by personality changes, intellectual impairment, flapping tremor and a decreased consciousness level. In the advanced stages it is called hepatic coma, which may lead to death. The diagnosis of hepatic encephalopathy is made primarily by recognition of neuropsychiatric changes occurring in a patient with liver disease, after exclusion of brain diseases. |

## Diseases of gallbladder or biliary tract (DC10-DC1Z)

This is a group of conditions characterised as being in or associated with the gallbladder (an organ) and the biliary tract (the passageways for bile).

**Coded Elsewhere:** Neoplasms of the gallbladder or biliary tract

Structural developmental anomalies of gallbladder (LB20.1)

Structural developmental anomalies of bile ducts (LB20.2)

Structural developmental anomalies of gallbladder or bile ducts (LB20.Z)

### DC10

#### Acquired anatomical alterations of gallbladder or bile ducts

This considers the structure in the alterations of the gall bladder and the long tube-like structures that carry bile.

**Exclusions:** Congenital anomalies of gall bladder and bile ducts (LB20)

**Coded Elsewhere:** Perforation of gallbladder or bile ducts (ME24.35)

#### DC10.0 Obstruction of gallbladder or bile ducts

This is obstruction in the small organ that aids mainly in fat digestion and concentrates bile produced by the liver and in any of a number of long tube-like structures that carry bile.

**Exclusions:** Obstruction of gall bladder and bile ducts: with cholelithiasis (DC11)

DC10.00 Obstruction of cystic duct

DC10.01 Obstruction of gall bladder

DC10.02 Obstruction of bile duct

**Exclusions:** with cholelithiasis (DC11)

DC10.0Y Other specified obstruction of gallbladder or bile ducts

DC10.0Z Obstruction of gallbladder or bile ducts, unspecified

#### DC10.1 Hydrops of gallbladder

Abnormal accumulation of serous fluid in the gallbladder

#### DC10.2 Fistula of gallbladder or bile duct

This is an abnormal connection or passageway between gallbladder or bile duct and other organs.

#### DC10.3 Polyp of gallbladder

The deposits of cholesterol and triglyceride in the gallbladder wall, projecting into the lumen.

**Exclusions:** Adenoma of gallbladder (2E92.6)

#### DC10.4 Cholesterolosis of gallbladder

**Inclusions:** Strawberry gallbladder

#### DC10.Y Other specified acquired anatomical alterations of gallbladder or bile ducts

|                |                                                                                                                                                                                                                                                                                            |

| <b>DC32.4</b> | <b>Chronic idiopathic pancreatitis</b><br>This is an inflammation of the pancreas characterised by recurring or persistent abdominal pain, not associated with known risk factors.                                                                                                                                                                                                                                                                                     |
| <b>DC32.5</b> | <b>Tropical pancreatitis</b><br>Tropical pancreatitis is a rare pancreatic disease of juvenile onset occurring mainly in tropical developing countries and characterised by chronic non-alcoholic pancreatitis manifesting with abdominal pain, steatorrhoea and fibrocalculous pancreatopathy. It is also commonly associated with the development of pancreatic calculi and pancreatic cancer at a much higher frequency than seen in ordinary chronic pancreatitis. |
| <b>DC32.Y</b> | <b>Other specified chronic pancreatitis</b>                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>DC32.Z</b> | <b>Chronic pancreatitis, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                               |

**DC33****Autoimmune pancreatitis**

Autoimmune pancreatitis (AIP) is a rare pancreatic disease characterised by chronic non-alcoholic pancreatitis that presents with abdominal pain, steatorrhoea, obstructive jaundice and responds well to steroid therapy and is seen in two subforms: type 1 AIP which affects elderly males, involves other organs and has increased immunoglobulin G4 (IgG4) levels and type 2 AIP which affects both sexes equally but presents at a younger age and has no other organ involvement or increased IgG4 levels.

**DC34****Obstructive pancreatitis**

This is obstruction in the inflammation of the pancreas which requires immediate medical attention and hospitalization during an attack that has multiple causes and symptoms, which occurs when pancreatic enzymes (especially trypsin) that digest food are activated in the pancreas instead of the small intestine.

## Diverticular disease of intestine (DC70-DD1Z)

Diverticula are a major burden of illness in an aging population, presenting with bleeding or in form of a diverticulitis. Many are asymptomatic. Most diverticula (pseudodiverticula) occur in the colon, occurrence in the small intestine is also possible, but less frequent.

**Exclusions:** Gastric diverticulum (DA40.3)  
Diverticulum of oesophagus, acquired (DA20.1)  
Meckel diverticulum (LB15.0)

## Diverticular disease of small intestine (DC70-DC72.Z)

Diverticula can occur anywhere in the small intestine, but they are most common in the jejunum. They represent herniations through the mesenteric side of the bowel and are usually acquired. This refers to the clinical entity characterised by the presence of sac-like outpocketings of the intestinal mucosa and submucosa through weak points of the muscle layer of the small intestine. This contains both diverticulitis and diverticulosis.

**Exclusions:** Meckel diverticulum (LB15.0)  
Diverticulum of duodenum (DA50.1)

**Coded Elsewhere:** Diverticulum of duodenum, with complication (DA50.1)

**DC71****Diverticulosis of small intestine**

Diverticulosis of small intestine is a condition characterised by the presence of multiple sack-like mucosal herniations called diverticula through weak points in the wall or lining of the small intestine. Small intestinal diverticula are far less common than colonic diverticula. Most people with diverticulosis do not have any discomfort or symptoms. However, some people may experience pain or discomfort in the abdomen, bloating, and bleeding.

**DC71.0****Diverticulosis of small intestine with haemorrhage**

This is the condition of having diverticula in the small intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the small intestine, with haemorrhage.

**DC71.1****Diverticulosis of small intestine without haemorrhage**

This is the condition of having diverticula in the small intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the small intestine, without haemorrhage.

**DC71.Z****Diverticulosis of small intestine, unspecified****DC72****Diverticulum of small intestine**

This is a morphological condition in which there is a small pouch in the lining of the small intestine, bulging outward through a weak spot. Each pouch is called a diverticulum. The condition of having multiple diverticula with symptoms, or with inflammation is excluded from here.

**DC72.0****Diverticulum of small intestine with haemorrhage**

This is a morphological condition in which there is a small pouch called diverticulum in the lining of the small intestine, with haemorrhage.

**DC72.1****Diverticulum of small intestine without haemorrhage**

This is a morphological condition in which there is a small pouch called diverticulum in the lining of the small intestine, without haemorrhage.

**DC72.Z****Diverticulum of small intestine, no specification about presence or absence of haemorrhage****Diverticular disease of large intestine (DC80-DC82.Z)**

This refers to the clinical entity characterised by the presence of sac-like outpocketings of the colonic mucosa and submucosa through weak points of the muscle layer of the large intestine. This contains both diverticulitis and diverticulosis. Diverticular disease is used to describe a specific clinical disorder with defined radiological and pathological appearance, in which there is a characteristic muscle abnormality, usually, but not invariably accompanied by the presence of diverticula which may or may not be inflamed.

**Exclusions:**

Diverticular disease of small and large intestine (DC90)

**DC80****Diverticulitis of large intestine**

Diverticulitis is applied when one or more diverticula are the source of visible macroscopic inflammation. It is often accompanied by pericolic abscess formation.

## Ischaemic vascular disorders of intestine (DD30-DD3Z)

Intestinal ischemia characterised by blood supply to the gastrointestinal tract that is inadequate to meet its metabolic demand

**Exclusions:** necrotizing enterocolitis of fetus or newborn (KB88)

**Coded Elsewhere:** Angiodysplasia of colon (DB34.0)

### **DD30** Acute vascular disorders of intestine

Intestinal ischaemia has an associated vascular block, usually due to atheroma, thrombus, or embolus but occasionally the result of an arteritis, vasculitis, or other condition.

**Coded Elsewhere:** Non-occlusive mesenteric ischaemia (DD31.0)

#### **DD30.0** Acute mesenteric arterial infarction

Acute mesenteric arterial infarction is an ischemic disorder of sudden interruption of mesenteric arterial flow because of occlusion of mesenteric artery. This may be further subdivided into acute mesenteric arterial embolus (AMAE) and acute mesenteric arterial thrombosis (AMAT).

#### **DD30.1** Acute mesenteric arterial ischaemia

Acute mesenteric ischemia is low flow states of mesenteric circulation, in which inadequate blood flow through the mesenteric circulation causes ischemia and eventual gangrene of the bowel wall. It can be caused by various conditions such as arterial occlusion, venous occlusion, strangulating obstruction, and hypoperfusion associated with nonocclusive vascular diseases.

#### **DD30.2** Acute mesenteric venous occlusion

Acute mesenteric venous occlusion is an ischemic disorder of sudden interruption of mesenteric venous flow because of venous thrombosis.

#### **DD30.Y** Other specified acute vascular disorders of intestine

#### **DD30.Z** Acute vascular disorders of intestine, unspecified

### **DD31** Chronic vascular disorders of intestine

Chronic mesenteric ischaemia is a clinical syndrome characterised by recurrent abdominal pain and weight loss as a result of repeated transient episodes of insufficient intestinal blood flow, usually related with the increased metabolic demand associated with digestion.

#### **DD31.0** Non-occlusive mesenteric ischaemia

Non-occlusive mesenteric ischaemia causes 20% to 30% of acute mesenteric ischaemia episodes. Mesenteric ischaemia without anatomic arterial or venous obstruction is due to mesenteric vasospasm, which can occur during periods of relatively low mesenteric flow, especially if there is underlying arterial atherosclerotic disease. Such low-flow state can result from heart failure, hypotension, or hypovolemia.

**Coded Elsewhere:** Acute non-occlusive mesenteric arterial ischaemia (DD30.1)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>DD31.00</b> | Ischaemic colitis                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                | Ischemic colitis is the most common form of ischemic injury to the gut and occurs more frequently in elderly people. The disease can result from either occlusive or nonocclusive events, mainly in the territory of the inferior mesenteric artery, in colonic branches of the superior mesenteric artery, and in the superior and inferior mesenteric veins. The splenic flexure and rectosigmoid junction, where low perfusion exists, are commonly affected. |

## Hernias (DD50-DD5Z)

A hernia is the protrusion of an organ or the fascia of an organ through the wall of the cavity that normally contains it. In this category hernia which relates to gastrointestinal organs is included.

|                |                                                                                                                                                   |

|                | A hernia occurs through the foramen in the pelvic wall.                                                                                           |
| <b>DD50.2</b>  | <b>Intra-abdominal hernia</b>                                                                                                                     |
|                | A hernia occurs intra-abdominally through the opening covered by peritoneum.                                                                      |
| <b>DD50.20</b> | <b>Primary intra-abdominal hernia</b>                                                                                                             |
|                | A hernia occurs intra-abdominally and primarily through the opening covered by peritoneum without surgery and trauma.                             |
|                | <b>Exclusions:</b> congenital malpositioning of the intestine (LB18)                                                                              |

**DD50.21** Secondary intra-abdominal hernia  
A hernia occurs intra-abdominally and secondarily through the opening covered by peritoneum after abdominal surgery and trauma.

**Coding Note:** Code also the causing condition

**DD50.2Y** Other specified intra-abdominal hernia

**DD50.2Z** Intra-abdominal hernia, unspecified

**DD50.Y** **Other specified non-abdominal wall hernia**

**DD50.Z** **Non-abdominal wall hernia, unspecified**

**DD51** **Inguinal hernia**

A hernia occurs when part of an internal organ bulges through a weak area of muscle. Most hernias occur in the abdomen. Inguinal hernia is the most common type and is in the groin.

**Coding Note:** Use additional codes, if desired, to identify complications such as obstruction or gangrene.

**Inclusions:** bubonocoele  
scrotal hernia

**DD52** **Femoral hernia**

A femoral hernia is a protrusion of a loop of the intestine through a weakened abdominal wall, located in the lower abdomen near the thigh.

A hernia occurs when the contents of the abdomen (usually part of the small intestine) push through a weak point or tear the thin muscular wall of the abdomen, which holds the abdominal organs in place. Femoral hernias tend to occur more often in women than in men.

**DD53** **Umbilical hernia**

A hernia occurs when part of an internal organ bulges through a weak area of muscle. An umbilical hernia is a protrusion of the peritoneum and fluid, omentum, or a portion of abdominal organ(s) through the umbilical ring. The umbilical ring is the fibrous and muscle tissue around the navel (belly-button). Small hernias usually close spontaneously without treatment by age 1 or 2. Umbilical hernias are usually painless and are common in infants.

**Exclusions:** Omphalocele (LB01)  
Urachal cyst (LB03.0)

**DD54** **Paraumbilical hernia**

Paraumbilical or periumbilical hernias occur next to and supra-umbilical occur just above the navel. Paraumbilical hernias are large abdominal defects through the linea alba in the region of the umbilicus and are usually related to diastasis of the rectus abdominis muscles.

**Inclusions:** Supraumbilical hernia

**DD55****Epigastric hernia**

A hernia occurs through the weak area of the upper abdomen between the umbilicus and the xiphoid on the linea alba. Although congenital epigastric hernias have been described in infants, they are usually considered an acquired condition.

**DD56****Incisional hernia**

A hernia occurs through the weak area on the incision of the past abdominal surgery or major abdominal trauma.

**DD57****Parastomal hernia**

A hernia occurs through the weak parastomal area after making stoma.

**DD5Y****Other specified hernias****DD5Z****Hernias, unspecified****Inflammatory bowel diseases (DD70-DD7Z)**

Inflammatory bowel disease is a group of inflammatory conditions of the intestine of unknown aetiology. Regarding its pathogenesis, it is hypothesized that the mucosal immune system shows an aberrant response towards luminal antigens such as dietary factors and commensal microbiota in genetically susceptible individuals.

**DD70****Crohn disease**

Crohn disease is characterised by chronic and relapsing transmural inflammation extending through all layers of the small and/or large intestinal walls and has potential to involve the patient's entire gastrointestinal tract.

**Inclusions:**

Granulomatous enteritis

Regional enteritis

Intestinal ulcer and erosion due to Crohn disease

**Exclusions:**

Ulcerative colitis (DD71)

**Coded Elsewhere:** Cutaneous or mucocutaneous Crohn disease (EE8Y)

**DD70.0****Crohn disease of upper gastrointestinal tract**

Crohn disease involved in upper gastrointestinal tract, such as oral cavity, oesophagus, stomach and duodenum.

**DD70.1****Crohn disease of small intestine**

Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involving the small intestine.

**Exclusions:**

Crohn disease of both small and large intestine (DD70.5)

**DD70.2****Crohn disease of appendix**

Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involving the appendix.

## Functional gastrointestinal disorders (DD90-DD9Z)

Functional gastrointestinal disorder (FGID) is used to define several variable combinations of chronic or recurrent gastrointestinal (GI) symptoms that do not have an identified underlying pathophysiology, and that occur in the absence of underlying structural abnormalities. FGID may include a number of separate idiopathic disorders which affect different part of the gastrointestinal tract. FGID are the most common problem in gastroenterological practice. The Rome process has helped to define the functional gastrointestinal disorders.

**Exclusions:**           Bodily distress disorder (6C20)  
                              Hypochondriasis (6B23)  
                              Symptoms, signs or clinical findings, not elsewhere classified (Chapter 21)

### DD90

#### Functional oesophageal or gastroduodenal disorders

This group incorporates oesophageal and gastroduodenal disorders which principally present unpleasant upper gastrointestinal complaints without apparent morphological changes of oesophagus and gastroduodenum.

**Exclusions:**           Bodily distress disorder (6C20)  
                              Hypochondriasis (6B23)

#### DD90.0

##### Globus

Globus is a persistent or intermittent non-painful sensation of a lump or foreign body in the throat unrelated to swallowing without structural or motor disorder of the pharynx and/or oesophagus, often accompanying with acute anxiety or emotional conflicts.

#### DD90.1

##### Functional swallowing disorder

Functional dysphagia is a disorder having no structural abnormalities and absence of gastroesophageal reflux for dysphagia, characterised by sense of solid and/or liquid foods sticking, lodging, or passing abnormally through the oesophagus.

**Inclusions:**           Functional dysphagia  
**Exclusions:**           dysphagia NOS (MD93)

#### DD90.2

##### Functional heartburn

Functional heartburn is a disorder having no structural abnormalities and absence of gastroesophageal reflux for heartburn, characterised by burning retrosternal discomfort or pain.

**Exclusions:**           heartburn NOS (MD95)

#### DD90.3

##### Functional dyspepsia

Functional dyspepsia is a disorder defined as the presence of dyspepsia symptoms thought to originate from the gastroduodenal region, in the absence of any organic, systemic, or metabolic disease that is likely to explain the symptoms such as epigastric pain, epigastric burning, postprandial fullness, and early satiation.

**Inclusions:**           Indigestion  
**Exclusions:**           Heartburn (MD95)  
                              Dyspepsia NOS (MD92)  
**Coded Elsewhere:** Chronic primary epigastric pain syndrome (MG30.00)

| <b>DD93.Z</b> | <b>Functional digestive disorders of infants, toddlers or children, unspecified</b> |                                                                                                                                                                                                                                                                                                                                                                    |
| <b>DD94</b>   | <b>Functional gallbladder disorder</b>                                              | This is a motility disorder that manifests symptomatically with biliary pain as consequence of either an initial metabolic disorder (supersaturated bile with cholesterol) or a primary motility alteration of gallbladder, at least initially, of any abnormalities of bile composition. There are normal liver enzymes, conjugated bilirubin and amylase/lipase. |
| <b>DD95</b>   | <b>Functional sphincter of Oddi disorder</b>                                        | This is a functional disorder of the sphincter of Oddi which defines motility abnormalities of sphincter of Oddi associated with prevention of bile and pancreatic juice from flowing through and a backup of the juice. It causes severe abdominal pain with elevated pancreatic enzymes, liver enzymes or both.                                                  |
| <b>DD9Y</b>   | <b>Other specified functional gastrointestinal disorders</b>                        |                                                                                                                                                                                                                                                                                                                                                                    |
| <b>DD9Z</b>   | <b>Functional gastrointestinal disorders, unspecified</b>                           |                                                                                                                                                                                                                                                                                                                                                                    |

## Postprocedural disorders of digestive system (DE10-DE13)

This is a group of disorders associated with the digestive system that occur after medical procedures and are not classified elsewhere.

**Exclusions:** Radiation proctitis (DB33.42)

**Coded Elsewhere:** Postcholecystectomy syndrome (DC14.1)

Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

Chronic dental injuries (DA08.2)

Radiation oesophageal ulcer (DA25.32)

Intramural haemorrhage of oesophagus (DA26.2)

Anastomotic ulcer (DA62)

Radiation oesophagitis (DA24.22)

Radiation gastritis (DA42.81)

Radiation gastric ulcer (DA60.63)

Radiation duodenal ulcer (DA63.51)

Radiation duodenitis (DA51.53)

Enteritis or ulcer of small intestine due to trauma (DA94.32)

Enteritis or ulcer of small intestine due to radiation (DA94.31)

Radiation-induced colitis (DB33.41)

Incisional hernia (DD56)

Short bowel syndrome (DA96.04)

Thermal oesophageal ulcer (NE02)

### DE10

#### Vomiting following gastrointestinal surgery

Vomiting occurred following gastrointestinal surgery due to disturbance or inadequate movement of GI tract.

### DE11

#### Dumping syndrome

Dumping syndrome is a group of signs and symptoms that develops most often in people who have had surgery to remove all or part of their stomach, or in whom surgically bypassed. It may occur early (during a meal or within 15-30 minutes after a meal with nausea, vomiting, abdominal pain, cramps, diarrhoea, dizziness, and heart palpitations) or late (1 to 3 hours after eating with sweating, weakness, fatigue, dizziness, lightheadedness, heart palpitations, and fainting).

### DE12

#### Malfunction or complication of external stoma of digestive organs

**Exclusions:** Postsurgical leak (NE81.3)

Acute gastrointestinal bleeding, not elsewhere classified (ME24.90)

Acute postoperative haemorrhage (NE81.0)

**Coded Elsewhere:** Skin problem resulting from external stoma of digestive organs (EM0Y)

### DE12.0

#### Colostomy or enterostomy malfunction or complication

**DE12.1**      **Gastrostomy malfunction**

**DE13**      **Postsurgical malabsorption, not elsewhere classified**

***Inclusions:***      Postsurgical blind loop syndrome

***Exclusions:***      Osteoporosis due to malabsorption (FB83.14)

---

**DE2Y**      **Other specified diseases of the digestive system**

**DE2Z**      **Diseases of the digestive system, unspecified**

# CHAPTER 14

---

## Diseases of the skin

This chapter has 246 four-character categories.

Code range starts with EA00

Diseases of the skin incorporate conditions affecting the epidermis, its appendages (hair, hair follicle, sebaceous glands, apocrine sweat gland apparatus, eccrine sweat gland apparatus and nails) and associated mucous membranes (conjunctival, oral and genital), the dermis, the cutaneous vasculature and the subcutaneous tissue (subcutis).

- Inclusions:**
- Diseases of the epidermis
  - Diseases of the dermis
  - Diseases of the epidermal appendages (hair, hair follicle, sebaceous glands, apocrine sweat gland apparatus, eccrine sweat gland apparatus and nails)
  - Diseases of subcutaneous tissue
  - Diseases of cutaneous vasculature
- Coded Elsewhere:**
- Malignant neoplasms involving the skin
  - Haematoma of surgical wound of skin (NE81.00)
  - Superficial incisional site infection (NE81.20)
  - Neonatal phototherapy burn (KC50)
  - Symptoms or signs involving the skin (ME60-ME6Y)

This chapter contains the following top level blocks:

- Certain skin disorders attributable to infection or infestation
- Inflammatory dermatoses
- Metabolic and nutritional disorders affecting the skin
- Genetic and developmental disorders affecting the skin
- Sensory and psychological disorders affecting the skin
- Skin disorders involving specific cutaneous structures
- Skin disorders involving certain specific body regions
- Skin disorders associated with pregnancy, the neonatal period and infancy
- Adverse cutaneous reactions to medication
- Skin disorders provoked by external factors
- Benign proliferations, neoplasms and cysts of the skin
- Disorders of the skin of uncertain or unpredictable malignant potential
- Cutaneous markers of internal disorders
- Postprocedural disorders of the skin
- Malignant neoplasms involving the skin

## Certain skin disorders attributable to infection or infestation (EA00-EA6Y)

Infections and infestations affecting the skin incorporate both direct invasion of the skin (including associated mucous membranes, hair and nails) by microorganisms or parasites and dermatoses arising from systemic or other distant infections (e.g. viral exanthems)

**Coded Elsewhere:** Certain parasitic infections or infestations affecting the skin

Infestation of the skin by ectoparasites

Pythiosis (1G60.1)

Protothecosis (1G60.2)

Mycetoma of unknown or unspecified type (1G60.0)

## Certain skin disorders attributable to viral infection (EA00-EA3Z)

This group incorporates both localised infection of the skin by virus (e.g. viral warts) and systemic or distant viral infections with important skin manifestations (e.g. viral exanthemata).

**Coded Elsewhere:** Pox virus infections of the skin

Human herpes virus infections involving skin or mucous membrane

Human papillomavirus infection of skin or mucous membrane (1E80-1E8Z)

## Viral exanthems (EA00-EA0Y)

Acute viral infections characterised by the appearance of a skin rash.

**Coded Elsewhere:** Measles without complication (1F03.0)

Rubella without complication (1F02.2)

Roseola infantum (1F01)

Erythema infectiosum (1F04)

Enteroviral vesicular stomatitis (1F05.0)

Foot and mouth disease (1F05.3)

Picornavirus infections presenting in the skin or mucous membranes (1F05)

### EA00

#### **Viral exanthem due to unknown or unspecified agent**

An exanthematic rash with symptoms suggestive of a viral aetiology where the agent is either unknown or unspecified.

### EA0Y

#### **Viral exanthem due to other specified virus**

## Certain dermatoses with suspected viral aetiology (EA10-EA12)

Skin disorders for which there are indications but no proof that viral infection is responsible.

### EA10

#### **Pityriasis rosea**

Pityriasis rosea is an acute, self-limiting skin disease, probably infective in origin, affecting mainly children and young adults, and characterised by a distinctive skin eruption and minimal constitutional symptoms. The cause of pityriasis rosea is uncertain, but many epidemiological and clinical features suggest that an infective agent may be implicated. In the majority of cases the disease follows a characteristic course whereby a so-called herald patch, larger than subsequent lesions, appears several days before the eruption of multiple oval scaly pink macules over the trunk and proximal limbs predominantly.

### EA11

#### **Papular purpuric gloves and socks syndrome**

This acute acral dermatosis is characterised by an intensely pruritic papular and often purpuric eruption affecting the hands, wrists, feet and ankles. This is frequently accompanied by oral inflammation and ulceration, malaise and fever. It affects adults predominantly and had been linked to a range of viral infections, most commonly to parvovirus B19.

### EA12

#### **Infantile papular acrodermatitis**

Infantile papular acrodermatitis (Gianotti-Crosti syndrome) is a cutaneous reaction pattern to a range of infective agents affecting predominantly young children aged from six months to two years. Agents implicated include hepatitis B virus, Epstein-Barr virus and a number of enteroviruses. The rash consists in a profuse eruption of 5-10 mm diameter dull red flat-topped papules which appear first on the thighs and buttocks, then on the extensor aspects of the arms, and finally on the face. There may be lymphadenopathy but the child is usually otherwise well and the eruption fades over the course of a few weeks.

#### **Exclusions:**

Acrodermatitis chronica atrophicans (1C1G.14)

Acrodermatitis continua of Hallopeau (EA90.41)

Acrodermatitis enteropathica (5C64.20)

Acrodermatitis perstans (EA90.41)

## Dermatoses from distant or systemic viral infection (EA20-EA20)

**Coded Elsewhere:** Hairy leukoplakia (DA01.01)

Erythema multiforme provoked by viral infection (EB12.Y)

Skin disorders associated with Human immunodeficiency virus infection (EL3Y)

### EA20

#### **Necrolytic acral erythema**

Necrolytic acral erythema is a distinctive acraly-located dermatosis affecting patients with active viral hepatitis C. It manifests principally on the dorsal surfaces of the feet and hands as well circumscribed dusky erythematous areas with flaccid blisters in its early stages and elevated scaly psoriasiform plaques in its chronic form. Microscopically there is keratinocyte necrosis in the upper epidermis.

### EA3Z

#### **Unspecified skin disorder attributable to viral infection**

Certain skin disorders attributable to bacterial infection (EA40-EA5Z)

Disorders of the skin and/or subcutaneous tissues caused by bacteria which a) cause infection normally limited to the skin (e.g. erythrasma); b) characteristically involve the skin at the same time as other organs (e.g. syphilis); c) which may cause disease in the skin as well as in other organs (e.g. cutaneous tuberculosis) or d) which infect other organs but which may manifest in the skin as a result of release of toxins or other indirect mechanism (e.g. streptococcal toxic shock syndrome).

**Exclusions:** Asymptomatic colonization of the skin by virulent or therapy resistant bacteria (QD04)

**Coded Elsewhere:** Certain sexually transmissible bacterial infections affecting skin  
Certain zoonotic bacterial infections involving the skin  
Dermatoses due to certain filamentous bacteria  
Pyogenic bacterial infections of the skin or subcutaneous tissues (1B70-1B7Z)  
Non-pyogenic bacterial infections of the skin (1C44)  
Yaws (1C1D)  
Pinta (1C1E)  
Endemic non-venereal syphilis (1C1F)  
Cutaneous tuberculosis (1B12.8)  
Leprosy (1B20)  
Cutaneous non-tuberculous mycobacterial infection (1B21.2)  
Acute meningococcaemia (1C1C.20)  
Disseminated gonococcal infection (1A73)  
Non-venereal treponematoses (1C4Z)  
Systemic bacterial infection affecting skin (1C41)

Predominantly tropical or subtropical bacterial infections affecting skin (EA40-EA40)

**Coded Elsewhere:** Cutaneous and subcutaneous melioidosis (1C42)

#### **EA40**

##### **Tropical phagedaenic ulcer**

Tropical (phagedaenic) ulcer is an acute or chronic skin disease seen in the tropics and subtropics that is characterised by necrosis of the epidermis and underlying superficial tissue. Ulcers may heal spontaneously, leaving regular depressed scars, but sometimes enlarge to enter a chronic phase. Chronic ulcers are often large and irregular in shape and may involve the whole circumference of a limb. Pseudoepitheliomatous changes can develop which may proceed to the development of frank squamous carcinoma. Vincent's organisms (*Fusobacterium nucleatum* and *Borrelia vincentii*) are thought to play a pathogenic role.

#### **EA50**

##### **Toxin-mediated cutaneous reactions to distant or systemic bacterial infection**

**Coded Elsewhere:** Scarlet fever (1B50)  
Streptococcal toxic shock syndrome (1C45.0)  
Staphylococcal toxic shock syndrome (1C45.1)  
Toxic shock syndrome (1C45)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EA50.0</b> | <b>Erythema marginatum rheumaticum</b><br>A cutaneous exanthem occurring in up to 10% of cases of rheumatic fever. The rash appears as widespread pink or red macules or papules that expand centrifugally with central clearing to form annular or polycyclic erythematous plaques. The exanthem may persist intermittently for weeks to months.                                                                                                                                                                                                                                                                  |
| <b>EA50.1</b> | <b>Streptococcal toxin-mediated perineal erythema</b><br>Streptococcal toxin-mediated perineal erythema is characterised by a striking diffuse macular erythema in the perineum occurring abruptly after a streptococcal pharyngitis. It is often recurrent.                                                                                                                                                                                                                                                                                                                                                       |
| <b>EA50.2</b> | <b>Staphylococcal scalded skin syndrome</b><br>A syndrome caused by an infection with the gram-positive bacteria <i>Staphylococcus</i> . This syndrome is characterised by fever, blisters, erythema, large areas of skin peel, or Nikolsky's sign. Transmission is by direct or indirect contact with an infected individual, through fomites, or by iatrogenic transmission. Confirmation is by identification of <i>Staphylococcus</i> in a blood or skin sample.<br><br><b>Exclusions:</b> Toxic epidermal necrolysis (EB13.1)<br><b>Coded Elsewhere:</b> Neonatal staphylococcal scalded skin syndrome (EH11) |
| <b>EA50.3</b> | <b>Staphylococcal scarlatina</b><br>An exanthem mediated by staphylococcal toxins from distant <i>Staphylococcus aureus</i> infection but without the systemic complications seen in staphylococcal toxic shock syndrome, of which it may be regarded as a mild form. Clinically it resembles scarlet fever.<br><br><b>Exclusions:</b> Scarletina NOS (1B50)                                                                                                                                                                                                                                                       |
| <b>EA50.Y</b> | <b>Other specified toxin-mediated cutaneous reactions to distant or systemic bacterial infection</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Inflammatory dermatoses (EA80-EB7Y)

A large group of skin disorders in which inflammation plays an important role.

- Exclusions:** Napkin candidosis (1F23.12)  
Bullous impetigo of the napkin area (1B72.0)  
Dermatoses precipitated by drug therapy (EH71)  
Dermatoses associated with specific classes of medication (EH76)
- Coded Elsewhere:** Nonorgan specific systemic autoimmune disorders involving the skin  
Autoinflammatory disorders (4A60-4A6Z)

## Dermatitis and eczema (EA80-EA8Z)

Dermatitis and eczema are synonymous and describe an inflammatory reaction pattern in the skin characterised histologically by spongiosis with varying degrees of acanthosis, and a superficial perivascular lympho-histiocytic infiltrate. The clinical features may include itching, redness, scaling and clustered papulo-vesicles. The condition may be induced by a wide range of external and internal factors acting singly or in combination.

- Exclusions:** Dermatitis herpetiformis (EB44)  
Periorificial dermatitis (ED90.1)  
Cercarial dermatitis (1F86.4)
- Coded Elsewhere:** Allergic contact dermatitis (EK00)  
Photo-allergic contact dermatitis (EK01)  
Irritant contact dermatitis (EK02)  
Contact dermatitis of external ear (EG40)  
Allergic contact blepharoconjunctivitis (9A06.72)  
Irritant contact blepharoconjunctivitis (EK02.11)  
Contact gingivostomatitis (DA02.3)  
Irritant contact dermatitis of hands (EK02.12)  
Irritant contact dermatitis of vulva (EK02.13)  
Dermatitis or eczema of eyelids (9A06.7)  
Dermatitis or eczema of external ear  
Eczematous nail dystrophy (EE13.5)  
Dermatitis due to exogenous factors (EK5Y)  
Eczematous drug eruption (EH6Y)

### EA80

#### Atopic eczema

A chronic inflammatory genetically-determined eczematous dermatosis associated with an atopic diathesis (elevated circulating IgE levels, Type I allergy, asthma and allergic rhinitis). Filaggrin mutations resulting in impaired epidermal barrier function are important in its pathogenesis. Atopic eczema is manifested by intense pruritus, exudation, crusting, excoriation and lichenification. The face and non-flexural areas are often involved in infants; involvement of the limb flexures may be seen at any age. Although commonly limited in extent and duration, atopic eczema may be generalised and life-long.

**Inclusions:** atopic dermatitis  
**Coded Elsewhere:** Atopic eczema of eyelids (9A06.70)  
Atopic eczema of hands (EA85.20)

**EA80.0 Infantile atopic eczema**

Infantile atopic eczema is defined as atopic eczema present during the first year of life. It typically first manifests between the ages of 2 and 6 months: approximately 50% of people with atopic eczema first present in infancy. The face and non-flexural areas are commonly affected. The napkin area tends to be relatively spared. Involvement of the limb flexures, as is typical in childhood atopic eczema, is also often seen in infancy.

**EA80.1 Childhood atopic eczema**

Atopic eczema in children and adolescents first presenting or continuing after infancy up to age 19 years. Its prevalence is highest in northern latitudes (e.g. nearly 20% in Norwegian children as compared with 0.7% in Tanzanian children). The sites most characteristically involved are the elbow and knee flexures, sides of the neck, wrists and ankles. As the disease progresses, lichenification (skin thickening) becomes a typical clinical feature, especially in areas that can be easily reached and scratched. Discoid variants are more common in children of African and Asian ancestry.

**EA80.2 Adult atopic eczema**

Atopic eczema in adults (19 years or greater) may persist from childhood, recur in adulthood in individuals with a history of atopic eczema in childhood or, less commonly, may develop de novo in adult life.

**EA80.Y Other specified forms of atopic eczema**

**EA80.Z Atopic eczema, unspecified**

**EA81**

**Seborrhoeic dermatitis and related conditions**

A group of related inflammatory skin disorders affecting predominantly the scalp, face, upper trunk and flexures and characterised by variable amounts of erythema, scale, inflammation and exudation. It is thought that *Malassezia* yeasts play an important role in their pathogenesis. Although these disorders are common, they are seen with increased frequency and severity amongst persons infected with HIV.

**Exclusions:** Seborrhoea (ED91.2)  
**Coded Elsewhere:** Infantile seborrhoeic dermatitis (EH40.0)  
Seborrhoeic dermatitis of eyelids (9A06.71)  
Seborrhoeic otitis externa (AA10)  
Malassezia folliculitis (1F2D.1)  
HIV-associated seborrhoeic dermatitis (EL3Y)

**EA81.0 Seborrhoeic dermatitis of face**

Seborrhoeic dermatitis affecting the face, most typically the nasolabial folds and chin.

**Exclusions:** Seborrhoea (ED91.2)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>EA84</b>         | <b>Asteatotic eczema</b><br>Asteatotic eczema develops from asteatosis cutis. In the latter cracking and crazing of the epidermal stratum corneum produces a flaky skin with a reticulate erythema beneath the scales. It occurs particularly on the lower legs. It is more common in the elderly and is provoked by a combination of defatting and desiccation of the epidermis. If inflammation progresses then it may become more pruritic and eczematous, asteatotic eczema.                                       |

| <b>EA88.00</b>      | <p>Human T-cell lymphotropic virus type 1 associated infective dermatitis of childhood</p> <p>An inflammatory dermatitis of childhood which develops in a minority of children with HTLV-1 infection, acquired usually via breast milk from an infected mother. Although the disease may clear spontaneously in adolescence, there is a high risk of development of Human T-cell lymphotropic virus-associated myelopathy (tropical spastic paraparesis) in later life. The onset is most frequent between the ages of 2 and 3, but it can manifest from as early as a few months of age to late childhood. Sites of predilection include the scalp, ears, eyelids, nostrils, neck, axillae and groin: erosions and crusting are commonly seen.</p> |

## Papulosquamous dermatoses (EA90-EA95)

A group of skin disorders characterised by epidermal thickening and scaling. The archetypal papulosquamous dermatosis is psoriasis.

### **EA90**

#### **Psoriasis**

Psoriasis is a common, chronic, relapsing, inflammatory skin disorder characterised by abnormal epidermal keratinization and hyperproliferation. It has a strong genetic component and affects some 2% of the populations of many regions of the world. Up to 10-20% of patients with psoriasis also experience an inflammatory polyarthritis (psoriatic arthritis). Although many people with psoriasis have limited disease, both psoriasis and its associated arthritis often cause major functional and psychosocial disability. The more severe forms of psoriasis are frequently associated with the metabolic syndrome and, as a result, a reduced life expectancy.

#### **EA90.0**

##### **Plaque psoriasis**

The commonest form of psoriasis, which manifests as well-defined red, scaly plaques on the skin. Typical sites of initial involvement are the scalp, the extensor surfaces of the elbows and knees, the lower back and the shins. In severe disease a majority of the skin surface may be involved.

#### **EA90.1**

##### **Guttate psoriasis**

An acute, usually widespread eruption of small (<1cm) papules of psoriasis associated in a majority of cases with preceding streptococcal infection, particularly tonsillitis and streptococcal sore throat. This form of psoriasis is seen typically in children and young adults. If untreated it tends to resolve over a period of four to six months.

#### **EA90.2**

##### **Unstable psoriasis**

Unstable psoriasis is an inflammatory form of psoriasis which may be the precursor of erythrodermic or generalised pustular psoriasis. It is characterised by intense inflammation around the edges of existing plaques and/or the appearance of multiple small fresh inflammatory papules and plaques. Some patients may have a lifelong tendency to unstable psoriasis. It tends to be difficult to control without resort to systemic therapy.

#### **EA90.3**

##### **Erythrodermic psoriasis**

Erythrodermic psoriasis is a severe generalised inflammatory form of psoriasis characterised by confluent intense erythema involving more than 90% of the skin surface. Erythrodermic psoriasis usually develops from preceding extensive, active plaque psoriasis but may arise de novo. Precipitating or trigger factors include withdrawal of systemic glucocorticosteroids, and, less frequently, abrupt discontinuation of methotrexate, phototherapy burns, or intercurrent infections. Patients may develop hypothermia or high output cardiac failure.

#### **EA90.4**

##### **Pustular psoriasis**

Psoriasis characterised by clinically visible pustules. Pustular psoriasis may be localised or generalised and life-threatening.

**Coded Elsewhere:** Infantile pustular psoriasis (EH40.Y)

| <b>EA90.41</b> | <p>Acropustulosis of Hallopeau</p> <p>An uncommon pustular form of psoriasis which may rarely eventuate into generalised pustular psoriasis. It is characterised by pustules and variable scaling occurring in and around the nails and nail-beds of the fingers and toes. It may cause marked nail destruction and may be associated with a distal interphalangeal joint arthritis, with palmoplantar pustulosis or with plaque psoriasis elsewhere.</p> <p><b>Exclusions:</b> Palmoplantar pustulosis (EA90.42)</p>                                                                                                                                                                                                                                   |
| <b>EA90.42</b> | <p>Palmoplantar pustulosis</p> <p>Palmoplantar pustulosis (PPP) is a chronic inflammatory skin condition characterised by crops of sterile pustules on the palms and soles which erupt repeatedly over months or years. The affected areas tend to become red and scaly; cracks may form and these are often painful. It is strongly associated with smoking. It is associated with psoriasis elsewhere on the body in up to 24% of patients though appears to have a genetic profile distinct from psoriasis vulgaris. Interleukin-36 receptor gene polymorphisms are strongly associated with generalised pustular psoriasis and have been detected in a minority of patients with PPP.</p> <p><b>Inclusions:</b> Palmoplantar pustular psoriasis</p> |
| <b>EA90.4Y</b> | Other specified pustular psoriasis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>EA91</b>    | <b>Lichen planus</b><br>Lichen planus is an inflammatory disease of skin and mucous membranes characterised by intense inflammation at the interface between epidermis/epithelium and dermis/corium. Its clinical manifestations vary according to how acutely it develops and to where it attacks. On the skin it typically presents as a symmetrical eruption of itchy, flat-topped pink or purple papules or plaques. Involvement of the scalp or nail matrix can produce permanent loss of hair or nails respectively. Although mucous membrane involvement can be asymptomatic, it can cause significant pain and distress, particularly when it is erosive. |
| <b>EA91.0</b>  | <b>Acute eruptive lichen planus</b><br>An acute generalised form of lichen planus.<br><b>Exclusions:</b> Lichenoid drug eruption (EH62)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>EA91.1</b>  | <b>Hypertrophic lichen planus</b><br>A chronic recalcitrant form of lichen planus often localised to the lower legs and ankles and characterised by plaques of markedly thickened skin. It is often extremely pruritic. It can leave permanent pigmentation and scarring.                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>EA91.2</b>  | <b>Follicular lichen planus</b><br>Lichen planus involving the hair follicle rather than the epidermis. It typically involves the scalp but may be seen elsewhere. Clinically it presents as grouped small, slightly scaly erythematous follicular papules.                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>EA91.3</b>  | <b>Lichen planus of genital skin and mucous membranes</b><br>Lichen planus of genital mucous membranes tends to be mild in men but may give rise to concern about sexually-transmitted infection. Although it may be asymptomatic in women the severe erosive form may cause mark pain and disability.                                                                                                                                                                                                                                                                                                                                                            |
| <b>EA91.4</b>  | <b>Lichen planus and lichenoid reactions of oral mucosa</b><br>Oral lichenoid reactions represent a common end point in response to extrinsic agents (drugs, allergens), altered self-antigens, or superantigens. Clinical presentation can vary from asymptomatic white reticular striae to painful erythema and erosions. Cutaneous and mucosal involvement of other sites is common. Although oral lichen planus is by definition idiopathic, oral lichenoid reactions may be caused by medications or exogenous agents such as cinnamates and other flavourings.                                                                                              |
| <b>EA91.40</b> | <b>Non-erosive lichen planus of oral mucosa</b><br>Oral lichen planus in which the epithelium remains intact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>EA92</b>    | <p><b>Lichenoid dermatoses</b></p> <p>Conditions other than lichen planus in which there is histological damage to the lower epidermis accompanied by a chronic inflammatory infiltrate in the papillary dermis disturbing the interface between the epidermis and dermis.</p> <p><b>Coded Elsewhere:</b> Lichenoid drug eruption (EH62)</p>                                                                                                                                                                                                                                                                                                                               |
| <b>EA93</b>    | <p><b>Pityriasis lichenoides</b></p> <p>Pityriasis lichenoides is an uncommon inflammatory skin disease of unknown aetiology. It can range from a relatively mild chronic form to a fulminant form with skin necrosis and severe constitutional symptoms. The disease can last from just weeks to months or years. The chronic form is manifest as multiple small flat asymptomatic scaly papules located predominantly on the trunk and proximal limbs. The acute forms present with the abrupt appearance of multiple papules in the same distribution which rapidly progress to haemorrhagic blisters and ulceration.</p>                                               |

**EA94****Pityriasis rubra pilaris**

Pityriasis rubra pilaris (PRP) is the name given to a group of clinically similar papulosquamous dermatoses of unknown aetiology. They initially present with erythematous, hyperkeratotic perifollicular papules, which tend to coalesce into plaques, but may progress to erythroderma, particularly in adults. The distribution, age of onset and speed of onset differ markedly between patients and these differences have been used to classify PRP into a number of clinically distinct subtypes.

**EA95****Small plaque parapsoriasis**

The benign form of parapsoriasis, a chronic multifocal skin disease characterised by atrophic erythematous patches located preferentially on the trunk and proximal extremities. The aetiology is unknown.

**Inclusions:** Digitate dermatosis  
Chronic superficial dermatitis

### Urticaria, angioedema and other urticarial disorders (EB00-EB0Y)

A heterogeneous group of disorders characterised by dermal and/or subcutaneous and submucosal oedema. The most common underlying mechanism is release of histamine from mast cells with consequent capillary dilatation and tissue oedema. This is responsible for the weals of spontaneous and most physical urticarias. A variety of other mechanisms are involved in other urticarial disorders.

**Exclusions:** Urticaria pigmentosa (2A21.10)  
Papular urticaria (EK50.00)

**Coded Elsewhere:** Hereditary angioedema (4A00.14)  
Acquired angioedema (4A00.15)  
Urticarial vasculitis (EF40.10)  
Food-induced urticaria or angioedema (4A85.21)  
Drug-induced urticaria, angioedema and anaphylaxis (EH61)  
Angioedema due to disordered complement activation or kinin metabolism (4A00.1Z)

**EB00****Spontaneous urticaria**

Spontaneous urticaria is a disease characterised by the daily or almost daily eruption of spontaneous weals, angioedema or both.

**Inclusions:** ordinary urticaria

**EB00.0****Acute urticaria**

Spontaneous urticaria lasting less than six weeks

**EB00.1****Chronic urticaria**

Spontaneous urticaria lasting six weeks or more.

**Inclusions:** Chronic spontaneous urticaria  
Chronic ordinary urticaria

**EB00.Z****Spontaneous urticaria, unspecified**

**EB01****Inducible urticaria and angioedema**

The inducible or physical urticarias are a heterogeneous subgroup of urticarias in which pruritic weals, angioedema or both are triggered reproducibly by specific external physical stimuli. The onset of wealing is characteristically rapid with resolution within an hour. The exception is delayed pressure urticaria where weals take longer to develop and resolve. Individual susceptibility to a physical urticaria may be short-lived or may last for years.

**EB01.0****Dermographism**

Dermographism is characterised by the development of short-lived itchy weals in response to stroking of the skin. The weals are typically linear. Symptomatic dermographism is triggered by light skin stroking or friction and is pruritic, whereas simple dermographism is a common physiological response to firm skin stroking and is not pruritic.

**Inclusions:** Factitious urticaria  
Dermatographic urticaria

**EB01.1****Cold urticaria**

Cold urticaria is triggered by skin cooling. Weals often develop as the skin rewarms afterwards. Cold contact urticaria is triggered by local skin cooling whereas the much less common cold reflex urticaria is triggered by generalised chilling causing a fall in core temperature.

**EB01.2****Delayed pressure urticaria**

Delayed pressure urticaria differs from other forms of physical urticaria in that the appearance of weals is delayed for several hours following the provoking stimulus. It is commonly associated with chronic spontaneous urticaria but tends to respond poorly to antihistamine therapy. The palms and soles, the waist, and the buttocks and thighs are commonly affected areas. Wealing can be induced by a variety of stimuli, including standing, walking, wearing of tight clothes, or sitting on a hard surface.

**EB01.3****Contact urticaria**

Urticaria resulting from skin or mucosal contact with a substance or substances capable of inducing wealing either by immunological or by non-immunological means.

**Coded Elsewhere:** Allergic contact urticaria (EK10)

**EB01.Y****Other specified forms of inducible urticaria and angioedema****EB01.Z****Inducible urticaria and angioedema, unspecified****EB02****Cholinergic urticaria and related conditions**

A range of urticarial disorders associated with heat and activation of sweating.

**Coded Elsewhere:** Exercise-induced anaphylaxis (4A84.30)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**EB11****Annular erythema**

Annular erythema is the term given to a group of chronic annular and gyrate eruptions in which irregular rings and arcs of elevated erythema form from initial inflammatory papules which slowly enlarge whilst clearing centrally. The lesions are usually located on the buttocks, thighs and upper arms, but any area may be involved. The condition may persist for months to years. In the majority of cases the aetiology remains obscure.

**Coded Elsewhere:** Erythema gyratum repens (EL10)

Necrolytic migratory erythema (EL10)

**EB12****Erythema multiforme**

Erythema multiforme is a self-limiting reactive inflammatory dermatosis triggered by cell-mediated hypersensitivity, most commonly to drugs or infection, particularly Herpes simplex. It is characterised by an eruption of macules, papules, nodules, vesicles and/or bullae affecting preferentially the dorsal aspects of the hands and forearms. It may also involve oral and genital mucous membranes.

**Exclusions:** Stevens-Johnson syndrome or toxic epidermal necrolysis (EB13)

**EB12.0****Cutaneous erythema multiforme**

Erythema multiforme confined to the skin and typically triggered by recurrent Herpes simplex infection.

**EB12.1****Mucocutaneous erythema multiforme**

Erythema multiforme with mucosal involvement, usually of oral and/or genital mucous membranes. It causes significantly more morbidity than erythema multiforme confined to the skin.

**Coded Elsewhere:** Erythema multiforme with oral ulceration (DA01.13)

**EB12.Y****Other specified erythema multiforme****EB12.Z****Erythema multiforme, unspecified****EB13****Stevens-Johnson syndrome or toxic epidermal necrolysis**

A spectrum of severe and life-threatening hypersensitivity disorders affecting skin and mucous membranes, most commonly precipitated by an idiosyncratic reaction to medication. Stevens-Johnson syndrome (SJS) always involves mucosal surfaces but the skin involvement is limited by definition to <10% body surface area (BSA). Toxic epidermal necrolysis (TEN) may sometimes spare mucous membranes but skin involvement is by definition >30% BSA. An intermediate form is recognised in which mucosal involvement is accompanied by skin involvement of 10-30% BSA (SJS-TEN overlap syndrome). All forms result in extensive sloughing and ulceration and carry a significant risk of fatal outcome.

**Coded Elsewhere:** Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug (EH63)

**EB13.0****Stevens-Johnson syndrome**

Stevens-Johnson syndrome is an immune-complex-mediated hypersensitivity disorder involving mucous membranes (conjunctivae, oral mucosa and genital mucosa) with, by definition, skin involvement limited to no more than 9% body surface area. It is related to toxic epidermal necrolysis and shares many of the same triggers, notably drugs, but the inflammation is centred on and close to mucosal surfaces. Although mortality is low, acute morbidity is high and conjunctival involvement has the potential to cause blindness.

**Coded Elsewhere:** Drug-induced Stevens-Johnson syndrome (EH63.0)

Acute cicatrizing conjunctivitis, Stevens-Johnson's (9A60.2)

Chronic cicatrizing conjunctivitis, Stevens-Johnson's (9A60.2)

**EB13.1****Toxic epidermal necrolysis**

Toxic epidermal necrolysis (TEN) is an acute life-threatening skin disease with commonly quoted overall risk of mortality of between 25 and 30%, though the risk of fatal outcome is around 90% in the most severely affected patients (SCORTEN score >5). It is characterised by the rapid onset of extensive erythema, necrosis, and bullous detachment of the epidermis (> 30% body surface area). Commonly, the mucous membranes are also involved. Death may result from a combination of sepsis, fluid depletion and multi-organ failure. In two thirds of cases, TEN is triggered by a clearly identifiable drug allergy.

**Coded Elsewhere:** Drug-induced toxic epidermal necrolysis (EH63.1)

**EB13.2****Stevens-Johnson and toxic epidermal necrolysis overlap syndrome**

A severe reactive skin disorder with features of both toxic epidermal necrolysis and Stevens-Johnson syndrome. It is defined by the presence of mucosal involvement and between 10% and 30% body surface area detachment of skin. It may be regarded as an intermediate form of these two disorders and, as with them, it can in most cases be attributed to a drug.

**Coded Elsewhere:** Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome (EH63.2)

**Neutrophilic dermatoses (EB20-EB2Y)**

A group of inflammatory skin disorders characterised by neutrophilic infiltration of the skin.

**Coded Elsewhere:** Disseminated gonococcal infection (1A73)

Behçet disease (4A62)

**EB20****Acute febrile neutrophilic dermatosis**

Sweet syndrome (the eponym for acute febrile neutrophilic dermatosis) is characterised by a constellation of clinical symptoms, physical features, and pathological findings which include fever, neutrophilia, tender erythematous skin lesions (papules, nodules, and plaques), and a diffuse infiltrate consisting predominantly of mature neutrophils that are typically located in the upper dermis. Sweet syndrome presents in three clinical settings: classical (or idiopathic), malignancy-associated, and drug-induced.

**Inclusions:** Sweet syndrome

**EB21****Pyoderma gangrenosum**

An idiopathic, rapidly evolving, and severely debilitating disease occurring most commonly in association with chronic ulcerative colitis. It is characterised by the presence of boggy, purplish ulcers with undermined borders, appearing mostly on the legs. The majority of cases are in people between 40 and 60 years old. Its etiology is unknown.

**Inclusions:** Phagedenic pyoderma

**EB2Y****Other specified neutrophilic dermatoses****EB30****Eosinophilic cellulitis**

Eosinophilic cellulitis (Wells syndrome) is characterised by a distinctive clinical picture resembling cellulitis, and a typical histology with tissue eosinophilia, oedema and 'flame' figures (clusters of eosinophils and histiocytes around a core of collagen and eosinophilic debris). It can affect either sex, usually in adult life. Any site may be involved, with single or multiple lesions, and recurrences are common. Initially, the lesions are itchy erythematous plaques with features resembling both urticaria and cellulitis but bullous and nodular forms have also been described. It may arise spontaneously but a number of drugs and infections have been implicated.

**EB31****Erythema nodosum**

An erythematous eruption commonly associated with drug reactions or infection and characterised by inflammatory nodules that are usually tender, multiple, and bilateral. These nodules are located predominantly on the shins with less common occurrence on the thighs and forearms. They undergo characteristic colour changes ending in temporary bruise-like areas. This condition usually subsides in 3-6 weeks without scarring or atrophy.

**Coded Elsewhere:** Acute sarcoidosis with erythema nodosum (4B20.5)

Drug-induced erythema nodosum (EH6Y)

### Immunobullous diseases of the skin (EB40-EB4Y)

A group of disorders characterised by the presence of circulating auto-antibodies directed against specific skin or mucous membrane antigens and resulting in blisters or erosions.

**EB40****Pemphigus**

Pemphigus is a group of chronic autoimmune skin diseases characterised by blister formation on the skin and the mucous membranes. The exact causes of the disease are unknown but the disease is mediated by auto-antibodies to desmosome components. Three clinical forms have been characterised. Pemphigus vulgaris, pemphigus foliaceus and pemphigus vegetans. Other variants exist, namely intercellular IgA dermatosis and paraneoplastic pemphigus.

**Coded Elsewhere:** Neonatal pemphigus (KA07.1)

**EB40.0****Pemphigus vulgaris**

Pemphigus vulgaris is a chronic autoimmune skin disease characterised by blister formation on the skin and the mucous membranes mediated by auto-antibodies to the desmosome components desmoglein 1 and 3.

| <b>EB40.1</b>       | <b>Pemphigus foliaceus</b><br>Pemphigus foliaceus is a chronic autoimmune skin disease characterised by superficial blister formation on the skin mediated by auto-antibodies to the desmosome component desmoglein 1.                                                                                                                                                                                                                                                                                                           |
| <b>EB40.2</b>       | <b>Paraneoplastic pemphigus</b><br>Paraneoplastic pemphigus is a severe, often fatal autoimmune disease characterised by blisters and erosions not only on the skin and the mucous membranes but also involving other organs including the respiratory system. Auto-antibodies to a variety of plakin components of desmosomes and hemidesmosomes and to the protease inhibitor, Alpha-2-macroglobulin-like-1 protein, have all been implicated in its pathogenesis. It is strongly associated with lymphoproliferative disease. |
| <b>Coding Note:</b> | Code also the causing condition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>EB41.1</b> | <p><b>Mucous membrane pemphigoid</b></p> <p>Mucous membrane pemphigoid (MMP) encompasses a heterogeneous group of mucous membrane-dominated autoimmune diseases in which autoantibodies to antigens of the basement membrane zone (BMZ) of mucous membranes and the skin result in subepithelial blistering. MMP may be limited to the conjunctivae (ocular pemphigoid) or to the oral cavity (oral pemphigoid). When the skin is involved, it is generally less extensive and less migratory than in bullous pemphigoid. MMP follows a chronic course and may lead to severe scarring with the attendant risks of loss of vision and oesophageal strictures.</p> <p><b>Coded Elsewhere:</b> Mucous membrane pemphigoid with ocular involvement (9A62)</p> |

| <b>EB42</b>   | <p><b>Linear IgA bullous dermatosis</b></p> <p>Linear IgA bullous dermatosis is an uncommon immunobullous disorder which occurs in both adults and children. It is characterised by linear deposition of IgA along the epidermal basement membrane. Although the clinical picture may resemble dermatitis herpetiformis, it is not associated with gluten enteropathy and it has different clinical and immunopathological attributes.</p>                                                                                                                                                                                                                                                                                                                 |
| <b>EB43</b>   | <p><b>Epidermolysis bullosa acquisita</b></p> <p>Epidermolysis bullosa acquisita is an acquired non-familial blistering disease characterised by the presence of autoantibodies to collagen VII at the epidermal basement membrane zone, as demonstrated by direct immunofluorescence. There is a wide spectrum of clinical manifestations including a trauma-induced variant and a more inflammatory variant.</p> <p><b>Exclusions:</b> Genetically-determined epidermolysis bullosa (EC30-EC3Z)</p> <p><b>Coded Elsewhere:</b> Transient neonatal epidermolysis bullosa acquisita (KA07.Y)</p>                                                                                                                                                           |
| <b>EB44</b>   | <p><b>Dermatitis herpetiformis</b></p> <p>Dermatitis herpetiformis is an immunobullous skin characterised by recurrent eruptions of intensely itchy papules, vesicles or bullae, which are typically grouped symmetrically on the extensor surfaces of the limbs and on the buttocks and back. The primary lesions are frequently obscured by excoriation. An incompletely understood abnormal response to dietary gluten provokes the formation of autoantibodies to tissue and epidermal transglutaminases and granular deposition of IgA in dermal papillae. The disease is strongly associated with gluten-sensitive enteropathy, which can range from mild jejunal epithelial inflammation to total villous atrophy (coeliac disease).</p>            |
| <b>EB4Y</b>   | <b>Other specified immunobullous disorder</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Cutaneous lupus erythematosus (EB50-EB5Z)

Lupus erythematosus involving the skin. This ranges from acute cutaneous lupus as may accompany a flare of systemic lupus erythematosus to a variety of chronic forms which are in the majority of cases limited to the skin.

**Exclusions:** Systemic lupus erythematosus (4A40.0)

Lupus vulgaris (1B12.8)

**Coded Elsewhere:** Systemic lupus erythematosus with skin involvement (4A40.00)

Neonatal lupus erythematosus (KA07.0)

### EB50

#### Subacute cutaneous lupus erythematosus

Subacute cutaneous lupus erythematosus is a non-scarring form of lupus erythematosus typified by the presence of circulating anti-Ro/SSA antibodies and discoid or annular inflamed red patches with variable fine scaling on sun-exposed skin, especially the sides of the face and neck, the vee of the neck, the extensor surfaces of the upper arms and the upper back: in contrast with systemic lupus erythematosus the cheeks tend to be spared. Visceral disease is less frequent than in systemic lupus erythematosus: renal involvement is rare and mild.

### EB51

#### Chronic cutaneous lupus erythematosus

Chronic cutaneous lupus erythematosus (LE) is characterised by the presence of circumscribed cutaneous plaques showing varying degrees of oedema, erythema, scaling, follicular plugging and atrophy. It most commonly presents as discoid plaques involving the face, ears and scalp but can be widely disseminated or may affect predominantly the extremities (chilblain LE) or subcutaneous fat (lupus panniculitis). It can cause marked disfigurement with prominent facial scarring and permanent hair loss. Most patients remain otherwise in good health but 5-10% may develop systemic lupus erythematosus. Photosensitivity is less apparent than in subacute cutaneous lupus erythematosus.

**Exclusions:** Systemic lupus erythematosus (4A40.0)

### EB51.0

#### Discoid lupus erythematosus

Discoid lupus erythematosus is characterised by the presence of discoid plaques showing varying degrees of oedema, erythema, scaling, follicular plugging and atrophy. It typically involves the face, ears and scalp, but widespread dissemination may occur. It can cause marked disfigurement with prominent facial scarring and permanent hair loss.

### EB51.Y

#### Other specified chronic cutaneous lupus erythematosus

### EB51.Z

#### Chronic cutaneous lupus erythematosus, unspecified

### EB5Z

#### Cutaneous lupus erythematosus of unspecified type

Scarring or sclerosing inflammatory dermatoses (EB60-EB61.Z)

A group of inflammatory dermatoses limited to skin and mucous membranes and characterised by variable degrees of sclerosis, fibrosis and atrophy.

**Coded Elsewhere:** Graft-versus-host disease (4B24)

## **EB60**

### **Lichen sclerosis**

Lichen sclerosis is a chronic inflammatory dermatosis of unknown aetiology. It affects both women and men of all ages. It is characterised by the development of white, smooth, atrophic plaques on vulval and perianal skin in females and on the prepuce and glans penis in males. It often results in scar formation leading to a narrow introitus or phimosis with impairment of urinary and sexual function. The risk of anogenital squamous cell carcinoma is slightly increased. Less commonly other sites of the skin are affected, either independently or in conjunction with anogenital involvement.

## **EB60.0**

### **Lichen sclerosis of vulva**

Lichen sclerosis of the vulva is an inflammatory disorder of unknown aetiology affecting the skin of the vulva and perianal area. Typically it affects women in the fifth and sixth decades of life though is not uncommon in prepubertal girls. It presents with pruritus, soreness or dyspareunia. The affected skin is white and atrophic, though secondary changes including maceration, purpura and erosion may dominate the clinical picture. In longstanding cases there may be marked shrinkage of the vulva, labial fusion and an increased risk of malignant transformation.

## **EB60.1**

### **Lichen sclerosis of penis**

Lichen sclerosis of the penis develops almost exclusively in uncircumcised males and is the result of chronic occluded contact of susceptible epithelium to urine. It often causes dyspareunia and difficulties with micturition. It manifests typically as a sclerotic phimosis of the prepuce, which it may not be possible to retract, together with inflammation and sclerosis of the mucocutaneous surface of the prepuce and glans penis. Stenosis and occasionally obliteration of the external meatal orifice may occur in severe cases. Although most commonly recognised in adult men it is a common cause of acquired phimosis in boys.

**Inclusions:** Balanitis xerotica obliterans

## **EB60.Y**

### **Lichen sclerosis of other specified sites**

## **EB60.Z**

### **Lichen sclerosis, unspecified**

## **EB61**

### **Morphoea**

A group of related diseases of poorly understood aetiology affecting principally skin and subcutaneous tissue and characterised by variable fibrosis, sclerosis and cutaneous atrophy.

**Coded Elsewhere:** Extragenital lichen sclerosis with morphoea (EB60.Y)

Atrophoderma of Pasini and Pierini (EE7Y)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EB61.0</b> | <b>Plaque morphoea</b><br>The commonest form of morphoea which presents as indurated waxy plaques, often with a violaceous border and commonly affecting the trunk, especially in the submammary folds and around the waist. The cause is unknown. It is commoner in women than men.<br><br><b>Inclusions:</b> Circumscribed scleroderma                                                                                                     |
| <b>EB61.1</b> | <b>Linear morphoea</b><br>Linear morphoea is a form of morphoea which usually presents in childhood or adolescence and is usually unilateral, affecting a limb with a linear induration of skin, subcutis and occasionally underlying muscle and bone. It may also affect the scalp and forehead ("en coup de sabre") producing a depressed scar likened to a healed sabre wound, with sclerosis of the skin and alopecia of affected scalp. |

## **EB7Y** Other specified inflammatory dermatoses

### Metabolic and nutritional disorders affecting the skin (EB90-EB9Y)

This group includes dermatoses resulting either from disturbed metabolic processes or from defective nutrition

**Coded Elsewhere:** Disorders of essential minerals or their metabolism affecting the skin  
Disorders of vitamins or their metabolism which may affect the skin  
Neonatal nutritional disorders affecting the skin (KC24)  
Dermatoses resulting from defective nutrition (5C3Y)

## **EB90** Dermatoses resulting from disturbed metabolic processes

This group comprises dermatoses where abnormal quantities of biological material accumulate in the skin. The effects of such accumulations depend on the particular material involved. Examples include lipid, mucin, amyloid, porphyrins and calcium.

**Coded Elsewhere:** Tophaceous gout (FA25.20)  
Genetic disorders of amino acid metabolism or transport affecting the skin  
Cutaneous amyloidosis (5D00.Y)

**EB90.0** **Diabetic skin lesions**  
Unspecified skin changes attributable to diabetes.

**Coding Note:** Always assign an additional code for diabetes mellitus.

| <b>EB90.20</b> | <p>Plane xanthoma</p> <p>Plane (planar) xanthomata are flat cutaneous xanthomata and contrast with eruptive and tuberous xanthomata which present as papules and nodules. They are often completely macular but may develop into elevated plaques. The commonest type is the xanthelasma of the eyelid but also included is the palmar xanthoma and a less common widespread form, diffuse plane xanthoma, which may be mimicked by a clinically similar disorder associated with paraproteinaemia, diffuse normolipidaemic plane xanthomatosis.</p> <p><b>Coding Note:</b> Code also the causing condition</p> <p><b>Coded Elsewhere:</b> Xanthelasma of eyelid (9A06.4)</p> |
| <b>EB90.21</b> | <p>Tuberous xanthoma</p> <p>Tuberous xanthomas are firm yellow-red nodules that occur over sites of pressure: they usually indicate the presence of hyperlipidaemia type 3 (Type III hyperlipoproteinaemia). They start as small xanthomas, usually over the extensor aspects of the elbows and knees, but can develop into quite exuberant exophytic lesions several centimetres in diameter and height. They can develop over other pressure sites particularly the heels and plantar surfaces of the feet.</p> <p><b>Coding Note:</b> Code also the causing condition</p>                                                                                                  |
| <b>EB90.22</b> | <p>Eruptive xanthoma</p> <p>Eruptive xanthomata manifest as crops of small yellow papules which erupt in large numbers over extensor surfaces, particularly the buttocks, back, legs and arms. They are associated with severe hypertriglyceridaemia and may be associated with uncontrolled diabetes mellitus.</p> <p><b>Coding Note:</b> Code also the causing condition</p>                                                                                                                                                                                                                                                                                                |
| <b>EB90.23</b> | <p>Tendinous xanthoma</p> <p>Tendinous xanthomata manifest most commonly as subcutaneous nodules attached to the extensor tendons over the knuckles or the Achilles tendon, though other tendons can sometimes be affected. They are most frequently seen in familial hypercholesterolaemia but may also be associated with secondary hypercholesterolaemia due to prolonged cholestasis.</p> <p><b>Coding Note:</b> Code also the causing condition</p>                                                                                                                                                                                                                      |

| <b>EB90.41</b> | <p>Calcific panniculitis</p> <p>Calcific panniculitis presents as discrete, firm subcutaneous masses, often affecting the thighs and hips. It is strongly associated with hyperparathyroidism, particularly in the context of chronic renal failure. It may occur in conjunction with but is clinically distinct from calcific arteriopathy (calciphylaxis).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>EB90.42</b> | <p>Calcific arteriopathy</p> <p>Calcific arteriopathy (calciphylaxis) is a life-threatening vasculopathic disorder characterised by painful cutaneous ischaemia and infarction due to calcification, intimal fibroplasia, and thrombosis of subcutaneous arterioles. It is most commonly associated with end-stage kidney disease or renal transplantation, particularly in the context of longstanding diabetes mellitus. Affected skin, commonly on the hips and thighs, appears mottled, grey and devitalized before progressing to full thickness infarction and deep ulceration. These changes may be accompanied by indurated subcutaneous plaques indicating an underlying calcifying panniculitis. The condition may be but is not always associated with hyperparathyroidism or an elevated calcium-phosphate product.</p> <p><b>Inclusions:</b> Calciphylaxis</p> |
| <b>EB90.4Y</b> | Other specified calcification of skin or subcutaneous tissue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Genetic and developmental disorders affecting the skin (EC10-EC7Y)

A large group of disorders, some limited to the skin but many involving other organ systems, due to heritable genetic defects, chromosomal abnormalities or embryofetal developmental anomalies.

**Coded Elsewhere:** Chromosomal disorders affecting the skin

DNA instability syndromes affecting the skin

Genetic disorders of adipose tissue or lipid metabolism affecting the skin

Genetic disorders of amino acid metabolism or transport affecting the skin

Sphingolipidoses with skin manifestations

Genetic hamartoneoplastic syndromes affecting the skin (LD27.5)

Variegate porphyria (5C58.13)

Mucopolysaccharidosis type 1 (5C56.30)

Mucopolysaccharidosis type 2 (5C56.31)

Mucopolysaccharidosis type 6 (5C56.33)

Acrodermatitis enteropathica (5C64.20)

Monogenic autoinflammatory syndromes (4A60)

Chronic mucocutaneous candidosis (1F23.14)

Congenital anomalies of skin development (LC60-LC60)

Developmental hamartomata of the epidermis and epidermal appendages (LC00-LC0Y)

Developmental anomalies of skin pigmentation (LC10-LC1Y)

Hamartomata derived from dermal connective tissue (LC20-LC2Y)

Developmental defects of hair or nails (LC30-LC31)

Developmental anomalies of cutaneous vasculature (LC50-LC5Z)

## Genetic syndromes affecting the skin (EC10-EC1Y)

**Coded Elsewhere:** Genetic syndromes affecting cutaneous vasculature

Ectodermal dysplasia syndromes (LD27.0)

Syndromes with premature ageing appearance as a major feature (LD2B)

### EC10

#### Genetic syndromes with poikiloderma

Hereditary syndromes in which poikiloderma (cutaneous pigmentation, atrophy and telangiectasia) is a conspicuous feature.

**Coded Elsewhere:** Cockayne syndrome (LD2B)

Rothmund-Thomson syndrome (LD2B)

Hereditary acrokeratotic poikiloderma, Weary type (LD27.Y)

Kindler syndrome (LD2B)

Bloom syndrome (4A01.31)

Dyskeratosis congenita (3A70.0)

### EC1Y

#### Other specified genetic syndromes affecting the skin

**EC20****Genetic disorders of keratinisation**

Heritable disorders characterised by abnormal epidermal keratinization. They include the ichthyoses and palmoplantar keratodermas.

**Coded Elsewhere:** Syndromic ichthyosis (LD27.2)

Keratosis pilaris (ED56)

**EC20.0****Non-syndromic ichthyosis**

Hereditary ichthyoses with clinical manifestations limited to the integument.

**EC20.00****Ichthyosis vulgaris**

Ichthyosis vulgaris accounts for 95% of all cases of hereditary ichthyosis. It is an autosomal dominant condition due to filaggrin gene mutations. At birth the skin may appear normal but it gradually becomes dry, rough and scaly, with most signs and symptoms appearing by the age of 5. Ichthyosis vulgaris can affect all parts of the skin surface including the face and scalp though the limb flexures are usually spared. Hyperlinearity of the palms is a characteristic feature. It is closely associated with the development of atopic eczema.

**EC20.01****X-linked ichthyosis**

X-linked ichthyosis is an X-linked recessive genodermatosis associated with steroid sulfatase deficiency and elevated plasma cholesterol sulfate. Generalised scaling is present at or shortly after birth, most prominently over the extremities, neck, trunk, and buttocks. It occurs only in males and may be associated with testicular disease and corneal opacities.

**EC20.02****Autosomal recessive congenital ichthyosis**

A heterogeneous group of genetically-determined ichthyoses with autosomal recessive inheritance.

**EC20.03****Keratinopathic ichthyoses**

Heritable ichthyoses resulting from mutations in keratin genes.

**EC20.0Y****Other specified or unclassifiable non-syndromic ichthyosis****EC20.1****Hereditary skin peeling**

A group of uncommon heritable disorders characterised by abnormal skin peeling

**EC20.2****Hereditary acantholytic dermatoses**

A group of heritable disorders characterised by epidermal acantholysis and loss of epidermal integrity.

**EC20.3****Hereditary palmoplantar keratodermas**

Heritable disorders of keratinisation of the skin of the palms and soles.

**EC20.30****Diffuse palmoplantar keratodermas**

Palmoplantar keratoderma in which there is confluent epidermal thickening affecting the palms and soles.

**Coded Elsewhere:** Hidrotic ectodermal dysplasia, Clouston type (LD27.03)

Genetically-determined epidermolysis bullosa (EC30-EC3Z)

Epidermolysis bullosa (EB) is the name given to a heterogeneous group of blistering disorders which in the majority of cases are due to genetically-determined defects in structural proteins of the epidermis and dermo-epidermal junction. The genetic forms are to be distinguished from the immunobullous disorder, epidermolysis bullosa acquisita (qv).

***Exclusions:*** Epidermolysis bullosa acquisita (EB43)

|             |                                                                                                                                                                                                                                                                    |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EC30</b> | <b>Epidermolysis bullosa simplex</b><br>Epidermolysis bullosa simplex is the name given to a heterogeneous group of genetically-determined defects in epidermal cell-cell adhesion. These give rise to blistering in response to frictional and shearing stresses. |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**EC31****Junctional epidermolysis bullosa**

Junctional (lucidolytic) epidermolysis bullosa is due to defects at the level of the lamina lucida of the epidermal basement membrane. The generalised severe form (Herlitz) is associated with widespread mucosal involvement of internal organs and has a high mortality in infancy.

**EC32****Dystrophic epidermolysis bullosa**

Dystrophic (dermolytic) epidermolysis bullosa is due to defects in or absence of type VII collagen. As a result the anchoring fibrils which secure the epidermal basement membrane to the dermis are defective or absent. The severe recessive form causes extensive scarring and predisposes to aggressive squamous cell carcinoma.

**EC33****Syndromic epidermolysis bullosa**

A small group of disorders including Kindler syndrome in which skin blistering is associated with other defects.

**Coded Elsewhere:** Kindler syndrome (LD2B)

Ectodermal dysplasia – skin fragility syndrome (EC30)

Skin fragility-woolly hair syndrome (EC21.1)

**EC3Z****Epidermolysis bullosa**

Genetic disorders affecting dermal collagen, elastin or other matrix proteins (EC40-EC4Y)

A heterogeneous group of disorders due to genetically-determined abnormalities of dermal structural proteins including collagen and elastin.

**Coded Elsewhere:** Ehlers-Danlos syndrome (LD28.1)

Marfan syndrome (LD28.01)

Genetically-determined cutis laxa (LD28.2)

Familial cutaneous collagenoma (LC2Y)

**EC40****Pseudoxanthoma elasticum**

Pseudoxanthoma elasticum (PXE) is an inherited connective tissue disorder characterised by progressive calcification and fragmentation of elastic fibres in the skin, retina, and arterial walls.

**EC4Y****Other specified genetic disorders affecting dermal matrix proteins**

Specified developmental anomalies affecting the skin (EC50-EC5Y)

**Coded Elsewhere:** Structural developmental anomalies of eyelids (LA14.0)  
Structural developmental anomalies of mouth or tongue (LA31)  
Facial clefts (LA51)  
Minor anomalies of pinnae (LA21)  
Amniotic bands (LD2F.1Y)

**EC50**

**Developmental anomalies of the umbilicus**

**Coded Elsewhere:** Allantoic duct remnants or cysts (LB03.0)  
Umbilical sinus (LB03.Y)  
Umbilical vitelline cyst or remnants (LB03.Y)  
Subcutaneous vitelline cyst or remnants (LB03.Y)

**EC5Y**

**Other specified developmental anomalies affecting the skin**

**EC7Y**

**Other specified genetic and developmental disorders affecting the skin**

**Sensory and psychological disorders affecting the skin (EC90-ED3Y)**

A group of skin disorders due to disturbances of cutaneous sensation including pruritus and pain, psychological disorders including artefact and delusional states, and dermatoses resulting from nerve damage and other neurological conditions.

Disturbances of cutaneous sensation (EC90-EC9Y)

This group includes dermatoses associated with itch, pain and other disturbances of cutaneous sensation.

**Coded Elsewhere:** Lichen simplex (EA83.0)

**EC90**

**Pruritus**

An intense itching sensation that produces the urge to rub or scratch the skin to obtain relief.

**Exclusions:** neurotic excoriation (6B25.1)

**Coded Elsewhere:** Pruritus of pregnancy (JA65.11)

**EC90.0**

**Pruritus due to skin disorder**

Pruritus due to skin disorder, especially those such as xerosis cutis or psoriasis where itch may occur but is not an inherent component of the disorder.

**EC90.1**

**Pruritus due to systemic disorder**

Pruritus due to underlying systemic disorder such as renal failure or cholestatic jaundice.

**Coded Elsewhere:** HIV-associated pruritus (EL3Y)

Paraneoplastic pruritus (EL1Y)

|                |                                                                                                                                                                                                                                                                                                                                                                   |

## Mental conditions affecting the skin (ED00-ED2Y)

This group includes cutaneous artefacts and disorders of cutaneous image and perception including delusional states and body dysmorphic disorder.

**Coded Elsewhere:** Olfactory reference disorder (6B22)  
Body dysmorphic disorder (6B21)  
Somatic delusion directed at the skin (MB26.09)

## Self-inflicted skin disorders (ED00-ED0Y)

This heterogeneous group of disorders all result from self-inflicted skin injury or pathomimicry directly induced either by psychopathological behaviour or by intentional deception.

**Coded Elsewhere:** Body-focused repetitive behaviour disorders (6B25)  
Trichotillomania (6B25.0)  
Self-inflicted hair-damaging disorder (6B25.Z)

### ED00

#### Artefactual skin disorder

Artefactual skin disorder encompasses a diverse range of self-inflicted skin injuries that are provoked by mechanical means or by the application or injection of chemical irritants or caustics. They may simulate other dermatoses but usually have a distinctive, geometric, bizarre configuration which cannot be otherwise explained.

**Inclusions:** Dermatitis artefacta

**Exclusions:** Excoriation disorder (6B25.1)  
Factitious disorders (6D50-6D5Z)  
Malingering (QC30)

**Coded Elsewhere:** Artefactual panniculitis (EF00.Y)

### ED01

#### Simulated skin disease

Simulated skin disease can present in a variety of ways such as application of glue, dyes or make-up to the skin (particularly by children or adolescent girls) and is usually though not always readily recognised for what it is. The motivation for the simulation can vary but may point to some form of psychopathology or may be purely experimentation.

**Exclusions:** Factitious disorders (6D50-6D5Z)  
Malingering (QC30)

### ED02

#### Painful bruising syndrome

Painful bruising syndrome (Gardner-Diamond syndrome, autoerythrocyte sensitization, psychogenic purpura) is a rare and poorly understood clinical presentation of unexplained painful ecchymoses, mostly on the extremities and/or the face. It has been associated with emotional stress or one or more concomitant mental illnesses.

### ED0Y

#### Other specified self-inflicted skin disorders

---

**ED2Y****Other specified mental conditions affecting the skin**

Neurological conditions affecting the skin (ED30-ED3Y)

Skin conditions resulting from degeneration of or damage to the nervous system

**Coded Elsewhere:** Pruritus due to neurological disorder (EC90.3)

Hereditary sensory or autonomic neuropathy (8C21)

**ED30****Neuropathic skin damage**

Skin changes attributable entirely or in part to sensory or autonomic nerve damage.

**ED30.0****Neuropathic skin ulceration**

Ulceration of the skin resulting from impairment of pain sensation due to sensory nerve dysfunction.

**Inclusions:** Neuropathic ulcer

**Coded Elsewhere:** Neuropathic skin ulceration due to leprosy (1B20.3)

**ED30.Y****Other specified neuropathic skin damage****ED31****Burning feet syndrome**

Burning feet syndrome is thought to be due to a specific autonomic neuropathy affecting predominantly small fibre cholinergic nerves. It is characterised by an uncomfortable burning sensation on the feet, often accentuated by heat or cold. It may be sporadic, familial or associated with diabetes mellitus.

**ED3Y****Cutaneous involvement in other specified neurological condition**

## Skin disorders involving specific cutaneous structures (ED50-EG02)

### Disorders of the epidermis and epidermal appendages (ED50-EE21)

This group incorporates skin disorders involving principally the epidermis, including abnormalities of keratinization and pigmentation, and the epidermal appendages, namely the hair follicular unit (hair, hair follicle, sebaceous gland, apocrine duct and apocrine gland), the eccrine sweat gland apparatus (eccrine duct and gland) and the nail apparatus.

### Disorders of epidermal keratinisation (ED50-ED5Y)

This group incorporates dermatoses characterised by scaling (ichthyoses and hyperkeratoses), epidermal thickening (acanthoses and keratodermas), loss of cohesion (acantholytic dermatoses and skin peeling) or xeroderma.

**Coded Elsewhere:** Hereditary acantholytic dermatoses (EC20.2)

#### ED50

#### Ichthyoses

Genetically-determined and acquired disorders of epidermal keratinization characterised by diffuse scaling and/or thickening of the stratum corneum.

**Coded Elsewhere:** Non-syndromic ichthyosis (EC20.0)

Syndromic ichthyosis (LD27.2)

Hereditary ichthyosis (EC20.Y)

#### ED50.0

#### Acquired ichthyosis

Acquired ichthyosis resembles autosomal dominant ichthyosis vulgaris but develops in adult life in individuals without a previous history of ichthyosis. It may be caused by certain drugs but when associated with underlying malignancy (i.e. paraneoplastic) it is strongly associated with Hodgkin lymphoma and may be the presenting sign of that disease. It may less commonly be associated with other lymphoid neoplasms or solid tumours.

**Exclusions:** Hereditary ichthyosis (EC20)

**Coded Elsewhere:** Paraneoplastic acquired ichthyosis (EL10)

#### ED50.Z

#### Ichthyosis of unspecified type

#### ED51

#### Diffuse epidermal hyperkeratosis and acanthosis

Conditions characterised by diffuse thickening of the horny and/or spinous layers of the epidermis.

#### ED51.0

#### Acanthosis nigricans

Acanthosis nigricans is characterised by dark, thick, velvety skin in body folds and creases. It is most commonly encountered in association with obesity and type 2 diabetes though may be a component of a number of genetic syndromes. Hyperinsulinaemia and insulin resistance are important underlying factors. Acanthosis nigricans may rarely be due to underlying malignancy (paraneoplastic acanthosis nigricans).

**Coded Elsewhere:** Paraneoplastic acanthosis nigricans (EL10)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ED51.00</b> | <p>Benign acanthosis nigricans</p> <p>Benign acanthosis nigricans is a thickening and pigmentation affecting predominantly flexural skin, especially the neck, axillae and groins. It is thought to be due to high concentrations of insulin binding to insulin-like growth factor receptors, with resultant keratinocyte proliferation. It is strongly associated with insulin resistance and obesity. Type 2 diabetes and the metabolic syndrome are commonly associated.</p> <p><b>Exclusions:</b> Paraneoplastic acanthosis nigricans (EL10)</p> |
| <b>ED51.0Y</b> | Other specified acanthosis nigricans                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**ED56****Keratosis pilaris**

Keratosis pilaris is a very common abnormality of keratinization characterised by keratinous plugging of follicular orifices with varying degrees of perifollicular erythema. It is seen in up to half of normal children and in three quarters of children with ichthyosis vulgaris. The sides of the face and the extensor surfaces of the upper arms are sites of predilection. Autosomal dominant inheritance can often be demonstrated. In some variants atrophy or pigmentation may be more prominent than keratosis.

**ED5Y****Other specified disorders of epidermal keratinisation****Disorders of skin colour (ED60-ED6Y)**

This group includes not only abnormalities of melanin pigmentation (e.g. vitiligo and melasma) but also skin colour changes due to other pigments (e.g. carotenaemia and argyria).

**Coded Elsewhere:** Genetic disorders of skin pigmentation (EC23)

Developmental anomalies of skin pigmentation (LC10-LC1Y)

Late lesions of pinta (1C1E.2)

Pigmentary abnormalities of skin due to drug (EH70)

**ED60****Acquired hypermelanosis**

Increased melanin pigmentation of the skin resulting from disease or from other stimuli including ultraviolet radiation and hormones.

**Coded Elsewhere:** Drug-induced hypermelanosis (EH70)

Labial melanin incontinence (DA00.2)

Oral melanin incontinence (DA01.Y)

Occupational melanosis (EK5Y)

**ED60.0****Physiological hypermelanosis**

The response of normal skin to exposure to natural or artificial ultraviolet radiation.

**ED60.00****Suntan**

Increased melanin pigmentation of the skin as a result of exposure to natural sunlight.

**ED60.01****Tanning due to exposure to artificial sources of ultraviolet radiation**

Increased melanin pigmentation as a result of deliberate (sunbeds and tanning booths) or unintentional exposure to UV.

**Exclusions:** Burn from exposure to artificial source of ultraviolet radiation (EJ41)

**ED60.1****Melasma**

A common condition of incompletely understood aetiology characterised by patchy melanin pigmentation of the malar prominences, forehead and perioral skin. The pigmentation is exacerbated by sun exposure. Melasma is common in pregnancy and in women taking oral contraceptive preparations; it may, however, also be seen in men.

**ED6Y****Other specified disorders of skin pigmentation****Disorders of hair (ED70-ED7Y)**

**Coded Elsewhere:** Genetic defects of hair or hair growth (EC21)

Developmental defects of hair or hair growth (LC30)

Trichotillomania (6B25.0)

Drug-induced hair abnormalities (EH72)

Self-inflicted hair-damaging disorder (6B25.Z)

**ED70****Alopecia or hair loss**

Disorders characterised by abnormal temporary or permanent loss of hair, particularly from the scalp and beard.

**Coded Elsewhere:** Madarosis of eyelid or periocular area (9A04.1)

**ED70.0****Male pattern hair loss**

Male pattern hair loss (common baldness; male androgenetic alopecia) is the result of a progressive, patterned hair loss mediated by exposure to androgens. Although over 90% of men demonstrate some degree of frontoparietal recession of the hairline by the age of 20, the extent of hair loss is genetically determined and only 30% of men ever develop extensive hair loss.

**Inclusions:** Common balding

**ED70.1****Female pattern hair loss**

Female pattern hair loss differs from male pattern hair loss not only in being generally less pronounced than in men but also by the fact that the normal frontal hair line is usually preserved. A quarter of women will develop clinically detectable pattern hair loss by the age of 70. In the majority of cases it can be attributed to the effects of androgens.

**ED70.2****Alopecia areata**

A microscopically inflammatory, usually reversible, patchy hair loss occurring in sharply defined areas and usually involving the beard or scalp

**ED70.20****Patchy alopecia areata of scalp**

The commonest form of alopecia areata in which one or more usually circular patches of scalp hair loss develop.

**ED70.21****Alopecia totalis**

Alopecia totalis is a form of alopecia areata in which hair loss extends to the entire scalp

**ED70.2Y****Other specified forms of alopecia areata****ED70.2Z****Alopecia areata, unspecified**

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>ED70.3</b>  | <p><b>Telogen effluvium</b></p> <p>Increased shedding of telogen hairs from the scalp. There are numerous triggers of which severe systemic illness and pregnancy are important examples.</p> <p><b>Coded Elsewhere:</b> Drug-induced telogen hair loss (EH72.00)</p>                                                                                                                                                                                                                                                                                                                                                                 |
| <b>ED70.30</b> | <p>Acute telogen effluvium</p> <p>Acute telogen effluvium is an acute-onset scalp hair loss that occurs two to three months after a triggering, often life-threatening, stress which interrupts normal anagen hair growth. It is commonly seen in survivors who have required intensive care for severe sepsis, blood loss, inflammatory disease or trauma. It may also result from acute starvation. Large numbers of anagen hairs are converted to telogen and are shed two to three months later resulting in a diffuse alopecia.</p>                                                                                              |
| <b>ED70.31</b> | <p>Postpartum telogen effluvium</p> <p>A physiological phenomenon in which diffuse hair loss occurs two to three months following parturition. It is due to a postponement of the normal cyclical conversion of anagen hairs to telogen during pregnancy. After parturition a large number of anagen hairs are converted simultaneously to telogen and shed two to three months later. Normal hair cycling is then resumed.</p>                                                                                                                                                                                                       |
| <b>ED70.3Y</b> | Telogen hair shedding due to other specified cause                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>ED70.4</b>  | <p><b>Anagen effluvium</b></p> <p>Anagen effluvium occurs after any insult to the hair follicle that impairs its mitotic or metabolic activity. Patients present with diffuse hair loss after an exposure to drugs or toxic chemicals. Chemotherapeutic agents are most commonly responsible for hair loss. The most severe hair loss occurs in association with doxorubicin, the nitrosoureas, and cyclophosphamide. Hair loss usually begins 7-14 days after a single pulse of chemotherapy. The hair loss is clinically most apparent after 1-2 months.</p> <p><b>Coded Elsewhere:</b> Drug-induced anagen effluvium (EH72.01)</p> |
| <b>ED70.5</b>  | <p><b>Scarring alopecia</b></p> <p>Hair loss in which there is irreversible damage to the hair follicle from inflammation, infection, malignant infiltration or trauma, resulting in destruction of the follicle and repair by fibrosis. Regeneration does not occur once the follicle has been destroyed.</p> <p><b>Inclusions:</b> Cicatricial alopecia</p> <p><b>Exclusions:</b> Lichen planopilaris (EA91.2)</p>                                                                                                                                                                                                                  |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>ED70.50</b> | <p>Folliculitis decalvans</p> <p>Folliculitis decalvans is characterised by the progression of scalp folliculitis to extensive inflammation, follicular destruction and scarring. In a variant called tufted folliculitis the hairs become clumped into tufts containing a dozen or more hairs. In contrast to the course in the vast majority of people who develop a bacterial pustular folliculitis of the scalp, individuals with folliculitis decalvans appear unable to eradicate <i>Staphylococcus aureus</i> from the hair follicle even with appropriate antibiotic therapy. Recurrent pustulation with surrounding inflammation and scaling leads to extensive permanent scarring and loss of hair.</p>                                                       |
| <b>ED70.51</b> | <p>Dissecting cellulitis</p> <p>Dissecting cellulitis is a destructive inflammatory disorder of the scalp characterised by widespread perifolliculitis with dermal abscess and sinus tract formation and extensive scarring. It occurs predominantly in black males aged between 18 and 40 years. It may be associated with hidradenitis suppurativa and acne conglobata (follicular occlusion triad), and with pilonidal sinus. Painful swellings develop around the vertex of the scalp and coalesce to form irregular undulating oedematous ridges and furrows. With time an extensive network of sinuses discharging pus may develop. Progressive scarring and permanent alopecia ensue.</p> <p><b>Coded Elsewhere:</b> Follicular occlusion syndrome (ED80.41)</p> |
| <b>ED70.5Y</b> | Scarring alopecia due to other specified cause                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Disorders of the hair follicle (ED80-ED9Y)

This group incorporates disorders of the hair shaft and hair follicular unit including, for example, hirsutism, alopecia, acne and hidradenitis suppurativa.

**Coded Elsewhere:** Chronic deep bacterial folliculitis (1B75.4)

### Acne and related disorders (ED80-ED81.Y)

A group of related disorders characterised by follicular occlusion and inflammation.

| <b>ED90.0</b>  | <b>Rosacea</b><br><p>The term rosacea encompasses a spectrum of changes that occur mainly in facial skin but may also involve the eyes. Most patients with rosacea have facial erythema and vascular instability which are variably associated with inflammatory papules and pustules, hypertrophic changes and ocular involvement. The cause of rosacea is unknown. It is doubtful that any single aetiological factor is responsible for the diverse features that comprise this disorder.</p> <p><b>Coded Elsewhere:</b> Posterior blepharitis (9A02.1)<br/> Lymphoedematous rosacea (BD93.1Y)</p> |
| <b>ED90.00</b> | <b>Erythematotelangiectatic rosacea</b><br><p>Erythematotelangiectatic rosacea manifests as facial erythema and a flushing tendency affecting but not confined to the central face and forehead: the lateral cheeks, the ears and the sides of the neck may also be involved. It is commonest in fair-skinned individuals and tends to be made worse by exposure to wind and sunlight. With time permanent telangiectasia develops.</p>                                                                                                                                                               |
| <b>ED90.01</b> | <b>Papulopustular rosacea</b><br><p>Papulopustular rosacea is characterised, as the name implies, by erythematous papules and sterile pustules affecting facial skin. These are typically located on the cheeks, central chin, nose and central forehead. The perilesional skin is inflamed and may be oedematous. In contradistinction to papulopustular acne, comedones, nodules and cysts are not a feature.</p>                                                                                                                                                                                   |
| <b>ED90.02</b> | <b>Phymatous rosacea</b><br><p>The hallmark of phymatous rosacea is rhinophyma but the forehead, chin and ears may also be affected. It is characterised by hypertrophy of the affected tissue which can produce gross distortion, particularly of the nose. The pathological changes include a variably severe mixed inflammatory infiltrate, sebaceous gland hyperplasia and dermal fibrosis. The aetiology is poorly understood. It is not always accompanied by other features of rosacea.</p>                                                                                                    |

| <b>ED92.0</b> | <b>Hidradenitis suppurativa</b><br><p>Hidradenitis suppurativa is a chronic disease characterised by recurrent, painful, deep-seated, rounded nodules and abscesses due to follicular occlusion with secondary inflammation and destruction of the pilo-sebaceo-apocrine apparatus and extension to the adjacent subcutaneous tissue. Subsequent hypertrophic scarring and suppuration of apocrine gland-bearing skin (axillae, groins, peri-anal and perineal regions) are the main clinical features. Infection and hormonal influence are described but are not the primary pathogenetic factor: the exact aetiology remains unknown. Obesity is common and is associated with more severe disease. The main complications are fistulae, arthropathy, carcinoma and amyloidosis.</p> |

## Disorders of eccrine sweat glands or sweating (EE00-EE0Y)

This group incorporates disorders characterised by increased or reduced sweating (hyper- and hypohidrosis respectively), and by eccrine duct occlusion (miliaria).

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EE00</b>    | <b>Hyperhidrosis</b><br>Excessive sweating. In the localised type, the most frequent sites are the palms, soles, axillae, inguinal folds, and the perineal area. Emotional factors may play a part. Generalised hyperhidrosis may be induced by a hot, humid environment, by fever, or by vigorous exercise.<br><b>Inclusions:</b> Excessive sweating                                                                                                     |
| <b>EE00.0</b>  | <b>Localised hyperhidrosis</b><br>Excessive sweating in specific and localised sites.                                                                                                                                                                                                                                                                                                                                                                     |
| <b>EE00.00</b> | <b>Palmoplantar hyperhidrosis</b><br>Excessive sweating of palms and soles. This is usually bilateral. Palmar hyperhidrosis may be triggered by emotional stress but, in severe cases, can be continuous and cause major disability by inhibiting normal social interaction and interfering with everyday tasks such as writing, preparing food or handling papers. Plantar hyperhidrosis may accompany palmar hyperhidrosis but may occur independently. |
| <b>EE00.01</b> | <b>Axillary hyperhidrosis</b><br>Excessive axillary sweating, sometimes in response to emotional stress but often persistent and disabling.                                                                                                                                                                                                                                                                                                               |
| <b>EE00.02</b> | <b>Craniofacial hyperhidrosis</b><br>Excessive sweating involving the scalp, face and/or neck.                                                                                                                                                                                                                                                                                                                                                            |

| <b>EE01.1</b> | <b>Hypohidrosis due to genetic abnormalities of eccrine gland structure or function</b><br>Hypohidrosis due to a heritable disorder of sweat gland or duct development. Sweating may be severely diminished or absent due to a paucity or absence of eccrine glands or to defective autonomic innervation. An absence of sweating leads to an inability to thermoregulate by evaporative cooling, and hyperthermia can occur with physical exertion or in a warm environment.<br><br><b>Coding Note:</b> Code also the causing condition<br><b>Coded Elsewhere:</b> Hereditary sensory and autonomic neuropathy type IV (8C21.2) |

| EE11.1      | <b>Yellow nail syndrome</b><br>Yellow nail syndrome is characterised by yellow, dystrophic, thick and slowly growing nails, associated with lymphoedema and respiratory involvement. Less than 100 cases have been described. Lymphoedema occurs more often in the lower limbs. It can appear at birth or later in life. Onset generally follows the onset of ungual abnormalities. Patients usually suffer from chronic bronchitis and in some cases, from chronic sinusitis, bronchiectasia and recurring pneumonitis. They can also present with pleural effusion (30% of cases) and bronchial hyperreactivity. Most cases are sporadic. However, familial forms have been described. Aetiology is unknown. |

| <b>EE20</b> | <b>Acute cutaneous distension syndrome</b><br>A common sequela of acute oedema, especially of the lower extremities. It manifests as blisters, which may be mistaken for an immunobullous disorder, (acute oedema blisters); or as superficial fissuring and inflammation of the skin (eczéma craquelé). |
| <b>EE21</b> | <b>Epidermal fragility</b><br>Epidermal fragility of unknown or unspecified cause resulting in reduced resistance to mechanical stress and manifesting as abnormal fissuring, erosion or blistering of the skin surface.                                                                                 |

Disorders of the dermis and subcutis (EE40-EF0Y)

This group incorporates disorders of dermal connective tissue, dermal histiocytic and granulomatous disorders and disorders affecting subcutaneous fat.

**Coded Elsewhere:** Cutaneous mastocytosis (2A21.1)

## Disorders of cutaneous connective tissue (EE40-EE7Y)

Skin disorders attributable to abnormalities affecting dermal and subcutaneous collagen, elastin and other connective tissue components.

**Coded Elsewhere:** Genetic disorders affecting dermal collagen, elastin or other matrix proteins (EC40-EC4Y)

| <b>EE40.31</b> | Age-related skin fragility                                                                                                                                                                                                                                                                        |

**EE40.32**      Purpura or bruising due to vascular fragility  
Purpura due to leakage or rupture of abnormally fragile cutaneous blood vessels.

**Coded Elsewhere:** Scorbatic purpura (5B56.0)

**EE40.Y**      **Other specified atrophy or degeneration of dermal or subcutaneous connective tissue**

**EE40.Z**      **Atrophy or degeneration of dermal or subcutaneous connective tissue, unspecified type**

**EE41**      **Abnormalities of dermal elastin**

**Coded Elsewhere:** Blepharochalasis (9A06.8)

Pseudoxanthoma elasticum (EC40)

Granulomatous slack skin (2B01)

**EE41.0**      **Cutis laxa**

Cutis laxa is the term used for a group of inherited and acquired conditions in which abnormalities of elastic fibres result in loose, redundant, hypoelastic skin. Typically, the skin can easily be pulled away from underlying tissue and only slowly returns to its original position. Unlike some conditions in the differential diagnosis, cutis laxa is not characterised by spontaneous bruising or abnormal scarring. Redundant skin is often most noticeable on the neck, hands, and groin, but can also be seen on the face, creating a premature aging appearance.

**Coded Elsewhere:** Genetically-determined cutis laxa (LD28.2)

**EE41.1**      **Anetoderma**

A condition presenting as focal areas of thinned, flaccid skin and resulting from focal defects in dermal elastin. The involved skin is often elevated above the surrounding normal skin but can be depressed. The condition may be primary and without identifiable cause or may be a sequela of a large number of different conditions which may damage elastin in the dermis.

**EE41.Y**      **Other specified dermatoses characterised by abnormal dermal elastin**

**EE41.Z**      **Abnormalities of dermal elastin, unspecified**

Poikiloderma (EE50-EE50)

Poikiloderma is defined as a combination of skin atrophy, pigmentation and telangiectasia. It is a component of a number of genetic syndromes, of certain non-organ-specific systemic autoimmune disorders and may follow skin injury including from radiotherapy.

**Coded Elsewhere:** Genetic syndromes with poikiloderma (EC10)

Poikiloderma vasculare atrophicans (EK91.1)

**EE50**      **Acquired poikiloderma**

**Coded Elsewhere:** Poikiloderma following radiotherapy (EL61)

Poikiloderma of Civatte (EK20)

## Fibromatoses and keloids (EE60-EE6Y)

A heterogeneous group of disorders characterised by pathologically increased deposition of fibrous tissue in the skin and subcutaneous tissues.

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EE60</b>    | <b>Keloid or hypertrophic scars</b><br>Keloid and hypertrophic scars result from the production of excessive amounts of collagen in the dermis during connective tissue repair following inflammation, injury or surgery. Keloid scars often develop apparently spontaneously after minor injury or inflammation and expand beyond the boundary of that initial injury or inflammation. Hypertrophic scars on the other hand remain confined to the area of injury or inflammation and may undergo spontaneous resolution. |
| <b>EE60.0</b>  | <b>Keloid</b><br>A keloid is a progressively enlarging scar resulting from formation of excessive amounts of collagen in the dermis during connective tissue repair following inflammation, injury or surgery. It differs from a hypertrophic scar in that a keloid expands beyond the boundaries of the initial wound or site of inflammation.<br><b>Coded Elsewhere:</b> Keloidal surgical scar (EL50.0)                                                                                                                 |
| <b>EE60.00</b> | Ear-lobe keloid<br>A common type of keloid which usually follows ear-piercing                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>EE60.0Y</b> | Other specified keloid                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|               | A condition commonly seen in association with longstanding diabetes mellitus, particularly in association with renal failure, in which multiple large follicular and non-follicular keratotic papules develop on the trunk and limbs. Trauma from scratching pruritic skin may be the initiating event leading to transepidermal elimination of degenerate collagen and elastic fibres from the dermis. |

## Histiocytic-granulomatous disorders of the skin (EE80-EE8Y)

A range of disorders characterised by the presence of increased numbers of histiocytes in the skin as a result of granulomatous inflammation or histiocytic infiltration.

**Coded Elsewhere:** Cutaneous sarcoidosis (4B20.5)

Crohn disease of anal region (DD70.4)

Langerhans cell histiocytosis involving the skin (2B31.20)

Indeterminate cell histiocytosis (2B31.6)

## **EE80** **Necrobiotic granulomatous skin disorders**

### **EE80.0** **Granuloma annulare**

A common inflammatory disorder in which granulomatous inflammation surrounds foci of degenerate dermal collagen. It presents clinically as dermal papules and annular plaques. It may be localised, especially over bony prominences, or generalised. The cause is unknown.

### **EE80.1** **Necrobiosis lipoidica**

Necrobiosis lipoidica is an uncommon skin condition in which degenerate dermal collagen is surrounded by a granulomatous inflammatory response to produce shiny, red-brown or yellowish patches in the skin, particularly on the shins. In severe cases the affected skin may ulcerate. It is associated in the majority of but not all cases with underlying diabetes mellitus, the onset of which it may precede.

### **EE80.Z** **Necrobiotic granulomatous skin disorders, unspecified**

## **EE81** **Dermal dendrocyte, Class IIa histiocytoses**

A sub-class of cutaneous histiocytic disorders involving dermal dendritic cells.

**Inclusions:** Non-Langerhans cell histiocytoses of dermal dendrocyte lineage

**Coded Elsewhere:** Juvenile xanthogranuloma (2B31.0)

Erdheim-Chester disease (2B31.Y)

## **EE8Y** **Other specified histiocytic and granulomatous disorders of the skin**

## Benign dermal lymphocytic or lymphoplasmacytic infiltrations or proliferations (EE90-EE91)

### EE90

#### **Benign lymphocytic infiltration of the skin**

Benign lymphocytic infiltration of Jessner is a chronic benign T-cell lymphoproliferative disorder characterised by the presence of non-scarring red tumid nodules, usually on facial skin. It may be difficult to distinguish from cutaneous lupus erythematosus.

**Inclusions:** Jessner lymphocytic infiltration

### EE91

#### **Lymphocytoma cutis**

Lymphocytoma cutis is a benign, cutaneous B-cell lymphoproliferative disorder. It presents as papules, nodules or plaques usually on the head and neck and pursues a chronic course. It occurs as a response to known or unknown antigenic stimuli that result in the accumulation of lymphocytes and other inflammatory cells.

**Inclusions:** Benign cutaneous lymphoid hyperplasia

**Coded Elsewhere:** Borrelial lymphocytoma cutis (1C1G.14)

## Disorders of subcutaneous fat (EF00-EF0Y)

**Coded Elsewhere:** Neonatal disorders of subcutaneous fat (KC22)

### EF00

#### **Panniculitis**

Panniculitis is the name given to a heterogeneous group of diseases all characterised by inflammation of subcutaneous adipose tissue.

**Exclusions:** Calcific panniculitis (EB90.41)

**Coded Elsewhere:** Erythema nodosum (EB31)

Lipodermatosclerosis (BD74.2)

Cold panniculitis of the newborn (KC22.1)

Alpha-1 antitrypsin deficiency panniculitis (5C5A)

Lupus panniculitis (EB51.Y)

Erythema induratum (EF40.2Y)

Cytophagic histiocytic panniculitis (EE8Y)

Gouty panniculitis (FA25.2Y)

### EF00.0

#### **Pancreatic enzyme panniculitis**

### EF00.Y

#### **Panniculitis of other specified aetiology**

### EF00.Z

#### **Panniculitis of undetermined or unspecified etiology**

### EF01

#### **Lipoatrophy or lipodystrophy**

Hereditary or acquired disorders characterised by loss of subcutaneous fat.

**Coded Elsewhere:** Genetic lipodystrophy (LD27.6)

| <b>EF02.2</b> | <b>Lipoedema</b><br>Lipoedema is characterised by non-pitting diffuse "fatty" swelling, usually confined to the legs, thighs, hips and upper arms. It may be confused with lymphoedema. Lipoedema may also occur in the scalp.<br><b>Coded Elsewhere:</b> Lipo-lymphoedema (BD93.1Y)                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>EF02.3</b> | <b>Cellulite</b><br>Cellulite is a common architectural derangement of subcutaneous adipose tissue which results in dimpling and nodularity of the overlying skin. It is seen most commonly in postpubertal women and affects principally the pelvic region, lower limbs, and abdomen. It is thought to result from herniation of multiple small aggregates of subcutaneous fat through the fibrous tissue at the dermohypodermal junction. Obesity predisposes to but is not necessary for its development. The term is in widespread use but is misleading as it has nothing to do with cellulitis. The condition is asymptomatic but may cause considerable embarrassment. |
| <b>EF02.Y</b> | <b>Other specified noninflammatory disorders of subcutaneous fat</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Disorders of cutaneous blood and lymphatic vessels (EF20-EG02)

**Coded Elsewhere:** Malformations involving cutaneous lymphatic vessels

Oedema of skin or soft tissues

Superficial thrombophlebitis (BD70)

Lower limb deep vein thrombosis (BD71.4)

Lymphoedema (BD93)

Venous varicosities of sites other than lower extremity (BD75)

## Malformations involving cutaneous blood vessels (EF20-EF2Z)

**Coded Elsewhere:** Genetic syndromes affecting cutaneous vasculature

Developmental anomalies of cutaneous vasculature (LC50-LC5Z)

### EF20

#### Acquired malformations of cutaneous blood vessels

**Coded Elsewhere:** Erythematotelangiectatic rosacea (ED90.00)

Actinic telangiectasia (EJ20.3)

Lower limb superficial venous ectasia (BD74.0)

#### EF20.0

##### Venous lake

#### EF20.1

##### Angiokeratoma

Angiokeratomas are acquired vascular lesions that result from the ectatic dilatation of pre-existing vessels in the papillary dermis, accompanied by hyperkeratotic epidermis. There are several clinical variants: solitary papular angiokeratoma, angiokeratoma corporis diffusum, angiokeratoma of Mibelli and angiokeratoma of Fordyce, amongst which the last, in which the lesions are located on the vulva or scrotum, is the most common.

**Coded Elsewhere:** Angiokeratoma corporis diffusum (5C56.01)

#### EF20.2

##### Lower limb venous telangiectases

Finely dilated superficial veins of lower limbs resulting from chronic venous hypertension.

#### EF20.3

##### Spider telangiectasis

A benign vascular ectasia consisting of a central dilated terminal arteriole from which radiate several ectatic capillaries, giving rise to a spider-like appearance. They occur most commonly on the upper trunk and proximal upper limbs. Large numbers may develop in association with pregnancy or liver disease.

**Exclusions:** Lower limb venous telangiectases (EF20.2)

#### EF20.4

##### Generalised essential telangiectasia

#### EF20.Y

##### Other specified acquired malformations of cutaneous blood vessels

#### EF20.Z

##### Acquired malformations of cutaneous blood vessels, unspecified

### EF2Z

#### Cutaneous vascular malformation, unspecified

## Purpura or bruising (EF30-EF3Z)

Purpura is a non-blanchable multifocal purple skin discolouration due to bleeding into the skin and manifested as petechiae (pinpoint foci of intradermal haemorrhage) and ecchymoses (larger areas of intradermal haemorrhage). It has many causes and may be the presenting sign of diseases as diverse as thrombocytopenia, primary amyloidosis, meningococcal septicaemia and scurvy. It will often be accompanied by haemorrhage into the subcutaneous tissues (spontaneous bruising or haematoma).

**Coded Elsewhere:** Purpura due to disorders of platelets

Purpura or bruising due to vascular fragility (EE40.32)

Painful bruising syndrome (ED02)

### EF30

#### **Purpura or bruising due to disorders of coagulation**

Purpura resulting from genetically-determined or acquired deficiencies or dysfunction of clotting factors.

### EF31

#### **Traumatic purpura**

Purpura and bruising attributable to trauma which may be self-induced (as from rubbing itchy skin), due to friction from clothing or due to man-handling, particularly of debilitated elderly patients.

### EF3Y

#### **Other specified purpura**

### EF3Z

#### **Purpura of unspecified aetiology**

### EF40

#### **Vasculitis or capillaritis involving the skin**

A range of conditions characterised by inflammation of cutaneous blood vessels with or without extravasation of red blood cells into the interstitium.

**Coded Elsewhere:** Giant cell arteritis (4A44.2)

Mucocutaneous lymph node syndrome (4A44.5)

Sneddon syndrome (4A44.6)

Thromboangiitis obliterans (4A44.8)

Pityriasis lichenoides (EA93)

Vasculitis associated with probable aetiology (4A44.Y)

### EF40.0

#### **Capillaritis**

Capillaritis results from extravasation of red blood cells from leaky capillaries into the dermis and manifests initially as a finely stippled pink to purple purpura, most commonly affecting the lower limbs. As iron is released and converted into haemosiderin, the skin stains gold or brown. Various patterns of capillaritis have been described and given separate names depending on the distribution, time course, extent and degree of pigmentation and presence or otherwise of epidermal thickening. The underlying processes involved in all these variants are very similar and of unknown cause. Histology may show mild inflammation around capillaries but no vasculitis.

**Inclusions:** Pigmented purpura

**Exclusions:** Pulmonary capillaritis (CB04.4)

**EF40.1 Vasculitis affecting small cutaneous blood vessels**  
**Coded Elsewhere:** Antineutrophil cytoplasmic antibody-associated vasculitis (4A44.A)  
 Cryoglobulinaemic vasculitis (4A44.90)  
 IgA vasculitis (4A44.92)  
 Acute haemorrhagic oedema of infancy (EH40.3)  
 Cutaneous leukocytoclastic vasculitis (4A44.B0)

**EF40.10** Urticarial vasculitis  
 An uncommon form of cutaneous leucocytoclastic vasculitis manifested by urticarial weals which, in contrast to those of chronic urticaria, are long-lasting and painful rather than itchy. A cause is often not identified. It may be associated with hypocomplementaemia and systemic inflammation (hypocomplementaemic urticarial vasculitis).  
**Coded Elsewhere:** Hypocomplementaemic urticarial vasculitis (4A44.91)

**EF40.1Y** Other specified vasculitis affecting small cutaneous blood vessels

**EF40.2 Localised cutaneous vasculitis**  
 A heterogeneous group of uncommon, predominantly chronic inflammatory dermatoses, each with a characteristic limited distribution, which all exhibit vasculitis on histopathological examination.

**EF40.20** Granuloma faciale

**EF40.2Y** Other specified localised cutaneous vasculitis

**EF40.Z Cutaneous vasculitis unspecified**

## Dermatoses attributable to hyperviscosity or microvascular occlusion (EF50-EF5Y)

A range of disorders characterised by vascular occlusion but attributable not to primary vascular inflammation but to intravascular occlusion.

**Coded Elsewhere:** Thrombotic thrombocytopenic purpura (3B64.14)  
 Antiphospholipid syndrome (4A45)  
 Disseminated intravascular coagulation (3B20)  
 Cryoglobulinaemic vasculitis (4A44.90)

**EF50 Livedoid vasculopathy**

**EF5Y Other specified dermatoses attributable to hyperviscosity or microvascular occlusion**

## Dermatoses resulting from vascular insufficiency (EF60-EF9Y)

**EF60 Ischaemic ulceration of skin**

**Coding Note:** Code also the causing condition

Dermatoses due to venous disease (EF70-EF7Z)

**Coded Elsewhere:** Venous leg ulcer (BD74.3)

Lipodermatosclerosis (BD74.2)

**EF70**

**Lower limb venous eczema**

A pruritic inflammatory dermatitis affecting the lower legs and ankles of individuals with lower limb venous hypertension. It may become acutely exudative, when the possibility of superimposed allergic contact dermatitis should be considered. Treatment of the associated venous hypertension is an important part of management. Venous eczema is not necessarily associated with the presence of varicose leg veins.

**EF7Y**

**Other specified dermatoses due to venous disease**

**EF7Z**

**Dermatoses due to venous disease, unspecified**

**EF9Y**

**Other specified dermatoses resulting from vascular insufficiency**

Functional vascular disorders of the skin (EG00-EG02)

Skin disorders due to disturbances in vascular tone and skin blood flow.

**EG00**

**Vasodilatation of extremities**

Disorders due to failure of normal vasoconstrictive mechanisms in the cutaneous vasculature.

**EG01**

**Vasoconstriction of extremities**

Disorders characterised by peripheral vasospasm including Raynaud disease and ergotism.

**Coded Elsewhere:** Raynaud phenomenon (BD42)

**EG02**

**Flushing disorders**

**Coded Elsewhere:** Carcinoid syndrome (5B10)

Flushing (ME64.4)

Menopausal hot flush (GA30.4)

## Skin disorders involving certain specific body regions (EG30-EG9Z)

Skin disorders involving the head and neck (EG30-EG4Z)

Dermatoses specific to the scalp; external ear; the eyes, eyelids and eyebrows; the lips and oral cavity; and to dermatoses specific to the skin of the head and neck

**Coded Elsewhere:** Dermatoses of the eye, eyelids or eyebrows

Dermatoses of the lips or oral cavity

### EG30

#### **Skin disorders localised to the scalp**

Skin disorders affecting preferentially or exclusively the scalp.

**Coded Elsewhere:** Dermatophytosis of scalp (1F28.0)

Seborrhoeic dermatitis of the scalp (EA81.1)

Scalp psoriasis (EA90.50)

Contact dermatitis of scalp (EK5Y)

Lichen planopilaris of scalp (EA91.2)

Chronic cutaneous lupus erythematosus of scalp (EB51.Y)

Scalp pruritus (EC90.Y)

Cutis verticis gyrata (EE7Y)

Lipoedema of the scalp (EF02.2)

Aplasia cutis congenita of scalp (LC60)

Hereditary hypotrichosis of scalp (EC21.2)

#### EG30.0

##### **Scalp folliculitis**

A non-scarring chronic superficial folliculitis of the scalp that is typically characterised by multiple minute, very itchy pustules within the scalp and which has in the past been termed acne necrotica miliaris. The cause is not well understood but an inflammatory response to *Propionibacterium acnes* has been postulated.

#### EG30.1

##### **Erosive pustular dermatosis of scalp**

Erosive pustular dermatosis of the scalp is a distinctive scalp disorder of the elderly characterised by the development of sterile pustules, erosions and crusts in areas of chronically sun-damaged scalp skin. Local trauma may also play an aetiological role. It normally responds to high-potency topical corticosteroids.

#### EG30.2

##### **Pityriasis amiantacea**

Pityriasis amiantacea refers to a reaction pattern on the scalp where large adherents are attached to the growing hairs and overlap like tiles on a roof. The abnormality may be localised and confined to a small patch or widespread involving the entire scalp. The underlying scalp is often moist and inflamed. The condition may occur on its own or may be associated with inflammatory disorders such as seborrhoeic dermatitis and psoriasis or with underlying dermatophytosis (tinea capitis).

#### EG30.Y

##### **Other specified scalp disorders not elsewhere classifiable**

#### EG30.Z

##### **Skin disorders localised to the scalp, unspecified**

## Disorders of the external ear involving the skin (EG40-EG4Z)

**Coded Elsewhere:** Dermatitis or eczema of external ear  
Otitis externa (AA10-AA3Z)  
Acquired deformity of pinna (AA41)

### Inflammatory disorders of the external ear (EG40-EG4Z)

**Coded Elsewhere:** Chronic otitis externa (AA13)  
Acute noninfectious otitis externa (AA11)  
Seborrhoeic otitis externa (AA10)

#### **EG40**

#### **Contact dermatitis of external ear**

Contact dermatitis of external ear may be due to irritants or allergy. Antimicrobial aural preparations are common causes of allergic contact dermatitis.

**Coded Elsewhere:** Irritant contact dermatitis of external ear (EK02.10)

#### **EG40.0**

#### **Allergic contact dermatitis of external ear**

Allergic contact dermatitis affecting the external ear.

#### **EG4Y**

#### **Other specified inflammatory disorder of external ear**

#### **EG4Z**

#### **Inflammatory disorder of external ear, unspecified**

## Skin disorders involving the genital and perianal regions (EG60-EG7Y)

**Coded Elsewhere:** Dermatoses of male genitalia (GA80-GA81.Y)  
Dermatoses of female genitalia (GA40-GA4Y)

## Dermatoses of the anus, perianal area or perineum (EG60-EG63.Z)

Disorders affecting the skin of and surrounding the anus including the intergluteal cleft and genitocrural folds.

**Coded Elsewhere:** Perianal lichen simplex (EA83.02)  
Herpes simplex infection of perianal skin or rectum (1A94.1)  
Anal warts (1A95.0)  
Primary anal syphilis (1A61.1)  
Drug-induced anal ulceration (EH76.Y)

#### **EG60**

#### **Anal pruritus**

Anal pruritus is irritation of the skin at the anal margin and surrounding perianal skin which results in the desire to scratch.

#### **EG61**

#### **Infections of the anus or perianal skin**

**EG62****Inflammatory dermatoses of the perianal area**

**Coded Elsewhere:** Crohn disease of anal region (DD70.4)

Dermatitis or eczema of perianal area (EA87.2)

Perianal psoriasis (EA90.53)

Hidradenitis suppurativa of anogenital region (ED92.0)

**EG63****Sacroccocygeal pilonidal disease**

Pilonidal disease describes a spectrum of clinical presentations, ranging from asymptomatic hair-containing cysts and sinuses to large symptomatic abscesses of the sacroccocygeal area which tend to recur. It is found predominantly in white males in their second and third decades and is thought to result from penetration of hair into the tissues with the formation of sinuses and a foreign-body granulomatous response. Risk factors for pilonidal disease include male gender, Caucasian ethnicity, sitting occupations, obesity, a deep natal cleft, and presence of hair within the natal cleft.

**EG63.0****Sacroccocygeal pilonidal sinus****EG63.1****Sacroccocygeal pilonidal cyst****EG63.2****Sacroccocygeal pilonidal abscess****EG63.Z****Sacroccocygeal pilonidal disease, unspecified**

**EG7Y****Other specified skin disorders involving the genital and perianal regions**

---

**EG9Y****Skin disorders involving other specific body regions****EG9Z****Skin disorders involving certain specific body regions, unspecified**

## Skin disorders associated with pregnancy, the neonatal period and infancy (EH10-EH40.Z)

Dermatoses which are either specific to or occur predominantly in pregnancy, the neonatal period or the first few months of life

**Coded Elsewhere:** Pregnancy dermatoses (JA65.1)

Diseases of the skin complicating pregnancy, childbirth or the puerperium (JB64.7)

### Skin disorders specific to the perinatal or neonatal period (EH10-EH3Y)

This group incorporates both skin disorders of the neonate and other disorders of the neonate with skin manifestations

**Coded Elsewhere:** Prenatally acquired infections with neonatal skin manifestations

Inflammatory dermatoses of the newborn (KC21)

Neonatal dermatoses due to maternal antibodies (KA07)

Neonatal nutritional disorders affecting the skin (KC24)

Neonatal disorders of subcutaneous fat (KC22)

Neonatal disorders of the oral mucosa (KC23)

Skin disorders associated with prematurity (KC30-KC3Y)

Iatrogenic injuries involving the skin of the neonate (KC50-KC7Y)

Miscellaneous skin disorders in the neonate (KC40)

## Neonatal skin infection (EH10-EH1Z)

Any condition of the skin affecting neonates, caused by an infection with a bacterial, viral, fungal, or parasitic source.

### EH10

#### Neonatal viral infections involving the skin

**Coded Elsewhere:** Perinatal Herpes simplex infection (KA62.A)

Disseminated perinatal varicella (KA62.2)

Mucocutaneous perinatal varicella (KA62.2)

### EH11

#### Neonatal pyogenic skin infections

**Coded Elsewhere:** Neonatal necrotising fasciitis (1B71.2)

### EH12

#### Neonatal fungal infections involving the skin

**Exclusions:** Prenatally-acquired mucocutaneous candidosis (KA63.2)

### EH1Z

#### Neonatal skin infection, unspecified

### EH3Y

#### Other specified skin disorders specific to the perinatal or neonatal period

**EH40****Dermatoses of infancy**

**Exclusions:** Syndromes with skin or mucosal anomalies as a major feature (LD27)

Congenital malformations affecting the skin (LC00-LC7Z)

**Coded Elsewhere:** Infantile atopic eczema (EA80.0)

Infantile acne (ED80.6)

Infantile papular acrodermatitis (EA12)

**EH40.0****Infantile seborrhoeic dermatitis**

An inflammatory but usually non-pruritic dermatitis of infants with a similar distribution to adult seborrhoeic dermatitis. Its principal manifestations are a confluent psoriasiform napkin eruption and greasy, adherent scaling over the scalp ("cradle cap"). In disseminated forms the face, retroauricular folds, neck and trunk may be involved. A small proportion of cases represent infantile onset of psoriasis ("napkin psoriasis"). Its onset is characteristically earlier than that of infantile atopic eczema, the subsequent development of which it does not preclude.

**Inclusions:** Neonatal seborrhoeic dermatitis

**Exclusions:** Seborrhoea (ED91.2)

**EH40.00****Cradle cap**

Cradle cap is a form of seborrhoeic dermatitis that manifests as yellowish, crusty, greasy patches of scaling on the scalp of infants between the second week and sixth month of life. The forehead and eyebrows are frequently affected. It is usually asymptomatic. It may be associated with infantile seborrhoeic dermatitis of other areas including the trunk and napkin area.

**EH40.01****Disseminated infantile seborrhoeic dermatitis**

A widespread form of infantile seborrhoeic dermatitis affecting the napkin area, scalp, face, neck, axillae and anterior trunk. In contrast to atopic eczema, pruritus is not usually evident and the infant remains otherwise well.

**EH40.02****Psoriasiform napkin dermatitis**

A napkin eruption characterised by sharply marginated confluent erythema and scale in the napkin area. It is considered a component of infantile seborrhoeic dermatitis, the disseminated form of which may start in the napkin area. In some cases, however, the same clinical picture may eventuate into psoriasis (napkin psoriasis). The clinical picture is essentially identical.

**EH40.0Z****Infantile seborrhoeic dermatitis, unspecified****EH40.1****Infantile napkin dermatoses**

**Coded Elsewhere:** Psoriasiform napkin dermatitis (EH40.02)

Acrodermatitis enteropathica (5C64.20)

| <b>EH61</b>   | <b>Drug-induced urticaria, angioedema and anaphylaxis</b><br>Adverse reaction to drugs due to release of histamine or vasoactive kinins.<br><b>Coded Elsewhere:</b> Drug-induced anaphylaxis (4A84.1)                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>EH61.0</b> | <b>Drug-induced urticaria</b><br>Urticaria provoked by drug. This may be due to immunological or non-immunological mechanisms. Mild anaphylactic reactions may cause little more than urticaria but may serve as a warning of more severe reactions if the responsible agent is encountered again. Aspirin is a well-known cause of non-allergic urticaria.                                                                                                                                                                                                                                               |
| <b>EH61.1</b> | <b>Drug-induced angioedema</b><br>Non-allergic angioedema due to drugs, in particular angiotensin converting enzyme inhibitors and nonsteroidal anti-inflammatory drugs.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>EH62</b>   | <b>Lichenoid drug eruption</b><br><b>Coded Elsewhere:</b> Drug-induced oral lichenoid reaction (EA91.4Y)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>EH63</b>   | <b>Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug</b><br>A spectrum of severe and potentially life-threatening reactions affecting skin and mucous membranes. In the majority of cases a drug can be implicated.                                                                                                                                                                                                                                                                                                                                                                     |
| <b>EH63.0</b> | <b>Drug-induced Stevens-Johnson syndrome</b><br>This is one of the four principal forms of severe cutaneous adverse reaction to drugs (SCARs) and is characterised by inflammation, blistering and erosion of skin and mucous membranes. By definition, there is involvement of at least one mucous membrane and skin detachment is limited to less than 10% of body surface area. Most cases occur within the first 8 weeks of drug exposure. The drugs most commonly involved are antimicrobial sulfonamides, anticonvulsants, allopurinol, nevirapine and oxicam–nonsteroidal anti-inflammatory drugs. |
| <b>EH63.1</b> | <b>Drug-induced toxic epidermal necrolysis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>EH63.2</b> | <b>Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**EH64****Drug-induced erythroderma**

Erythroderma (defined as erythema and scaling involving at least 90% of the skin surface) which is attributable to drug administration but which cannot be more precisely categorized, thus excluding more specific severe cutaneous adverse reactions to drugs reaction patterns such as DRESS syndrome, acute generalised exanthematous pustulosis (AGEP) and toxic epidermal necrolysis. Many drugs have been implicated.

**Exclusions:**

- DRESS syndrome (EH65)
- Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug (EH63)
- Drug-induced toxic epidermal necrolysis (EH63.1)
- Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome (EH63.2)
- Drug-induced acute generalised exanthematous pustulosis (EH67.0)

**EH65****DRESS syndrome**

DRESS syndrome (Drug Rash with Eosinophilia and Systemic Symptoms) is a hypersensitivity reaction characterised by a generalised skin rash, fever, eosinophilia, lymphocytosis and visceral involvement (hepatitis, nephritis, pneumonitis, pericarditis and myocarditis) and, in some patients, reactivation of human herpes virus 6.

**Inclusions:** Drug-induced hypersensitivity syndrome

**EH66****Fixed drug eruption**

The term fixed drug eruption describes the development of one or more annular or oval inflamed erythematous patches on the skin as a result of systemic exposure to a drug. The patches may develop into bullae. The inflamed patches normally resolve with post-inflammatory hyperpigmentation but typically recur at the same site(s), often with progressively more involved sites, following each reexposure to the drug. In extreme cases (generalised bullous fixed drug eruption) the clinical picture may mimic toxic epidermal necrolysis. A large number of drugs have been implicated as triggers.

**EH67****Acne or acneform reactions attributable to drugs**

**Coded Elsewhere:** Corticosteroid-induced acne (EH76.2)

**EH67.0****Drug-induced acute generalised exanthematous pustulosis**

This uncommon reaction to systemic medication is characterised by fever (generally on the same day as the start of the rash) and multiple, small, non-follicular pustules that arise on a widespread inflammatory erythema centred on the upper trunk and body folds. It may be difficult to differentiate from acute generalised pustular psoriasis. It usually appears within 24 hours of drug exposure. Antibiotics are probably the commonest precipitants although many drugs have been implicated.

**Inclusions:** Drug-induced toxic pustuloderma

**EH67.Y****Other specified acne or acneform reactions attributable to drugs****EH67.Z****Acne or acneform reactions attributable to drugs, unspecified**

## Skin disorders provoked by external factors (EH90-EK5Y)

A large group of skin disorders due to exposure of the skin to various external physical, chemical or environmental insults including chemical irritants and allergens, poisons, pressure, cold, heat, sunlight, radiation and physical injury.

**Coded Elsewhere:** Miscellaneous specified dermatoses provoked by pressure

Skin injury due to exposure to corrosive substances

Hand and arm vibration syndrome (NF08.20)

Contact dermatitis of external ear (EG40)

Allergic contact blepharoconjunctivitis (9A06.72)

Contact gingivostomatitis (DA02.3)

Haematoma of surgical wound of skin (NE81.00)

Superficial incisional site infection (NE81.20)

Cutaneous wounds, injuries or scars (ND56.0)

### EH90

#### Pressure ulceration

Pressure ulcers result from localised injury and ischaemic necrosis of skin and underlying tissues due to prolonged pressure, or pressure in combination with shear; bony prominences of the body are the most frequently affected sites; immobility and debility are major contributing factors.

**Inclusions:**

- pressure injury
- pressure ulcer
- bedsore

**Exclusions:** decubitus (trophic) ulcer of cervix (uteri) (GA15.1)

### EH90.0

#### Pressure ulceration grade 1

Pressure ulceration grade I is a precursor to skin ulceration. The skin remains intact but there is non-blanchable redness of a localised area, usually over a bony prominence. The area may be painful, firm, soft, warmer or cooler as compared to adjacent tissue. It can be difficult to detect in individuals with dark skin but affected areas may differ in colour from the surrounding skin. The presence of pressure ulceration grade 1 may indicate persons at risk of progressing to frank ulceration.

**Inclusions:** pressure injury stage 1 with nonblanchable erythema

### EH90.1

#### Pressure ulceration grade 2

Pressure injury with partial thickness loss of dermis. It presents as a shallow open ulcer with a red or pink wound bed without slough or as a serum-filled or serosanguinous blister which may rupture.

This category should not be used to describe skin tears, tape burns, incontinence associated dermatitis, maceration or excoriation

**Inclusions:** pressure injury stage 2 with partial thickness skin loss

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Dermatoses provoked or exacerbated by exposure to cold (EJ0Y-EJ0Y)

Skin conditions provoked by exposure to low temperatures.

**Coded Elsewhere:** Skin or soft tissue injury due to exposure to cold

Abnormal vascular reactivity to cold

**EJ0Y**

**Other specified dermatoses provoked or exacerbated by exposure to cold**

Dermatoses provoked by heat or electricity (EJ10-EJ1Y)

**Coded Elsewhere:** Burns of external body surface, specified by site (ND90-ND9Z)

Heat contact urticaria (EB01.Y)

Thermal keratosis (EK90.Y)

**EJ10**

**Erythema ab igne**

A characteristic reticular telangiectatic and pigmented dermatosis resulting from repeated or prolonged exposure to infrared radiation (heat) of insufficient energy to produce a burn. It most commonly affects the lower extremities or lower back as a result of habitually sitting too close to a heat source (radiator or open hearth) or from keeping a hot water bottle held against the skin.

**Exclusions:** Burns of external body surface, specified by site  
(ND90-ND9Z)

**EJ1Y**

**Other specified dermatoses provoked by heat or electricity**

Dermatoses provoked by light or UV radiation (EJ20-EJ6Y)

**Coded Elsewhere:** Porphyria or pseudoporphyria affecting the skin (EB90.3)

Cutaneous lupus erythematosus (EB50-EB5Z)

Dermatomyositis (4A41.0)

Rosacea (ED90.0)

Phototoxic reactions to skin contact with photoactive agents (EK20-EK2Z)

Abnormal sensitivity to light or UV radiation of uncertain or unspecified nature (ME66.0)

Photo-allergic contact dermatitis (EK01)

## Chronic effects of ultraviolet radiation on the skin (EJ20-EJ2Y)

**Coded Elsewhere:** Actinic keratosis (EK90.0)

Diffuse actinic keratinocyte dysplasia (EK90.1)

Brachioradial pruritus (EC90.3)

Disseminated superficial actinic porokeratosis (ED52)

Poikiloderma of Civatte (EK20)

Actinic cheilitis (EK90.Y)

### EJ20

#### Photoaging of the skin

The changes in skin which can be attributed to chronic exposure to ultraviolet radiation and which are clinically manifest principally as actinic elastosis, wrinkles and dyspigmentation.

**Inclusions:** Sun damage due to chronic sun exposure

### EJ20.0

#### Actinic elastosis

**Inclusions:** Solar elastosis  
Rhytides

### EJ20.1

#### Actinic lentigo

A circumscribed grey or brown macule resulting from chronic exposure to the sun or to artificial sources of ultraviolet such as sun-beds. They are typically located on the backs of the hands and forearms, shoulders, forehead and the scalp (if bald). They often coexist with and may be difficult to differentiate from plane seborrhoeic keratoses, which differ clinically in exhibiting fine scaling and histologically in showing proliferation of keratinocytes as well as melanocytes.

**Inclusions:** Liver spot

### EJ20.2

#### Actinic lentiginosis

The presence of multiple actinic lentigines. This is a common finding in people with fair skin who have a long history of repeated exposure to the sun where it most commonly affects the upper extremities, upper back, forehead and scalp (if bald). It can be generalised and occur at an earlier age in people with an addiction to sun-bathing and use of sun beds.

### EJ20.3

#### Actinic telangiectasia

Dermatoses due to ionizing radiation (EJ71-EJ7Z)

**Coded Elsewhere:** Acute effects of ionizing radiation on the skin

**EJ71**

**Chronic effects of ionizing radiation on the skin**

The long-term sequelae of prior exposure of skin to ionizing radiation.

**Coded Elsewhere:** Chronic radiodermatitis following radiotherapy (EL61)

Radionecrosis of skin attributable to diagnostic procedure (EL80)

Chronic radiation keratosis (EK90.Y)

**EJ7Z**

**Dermatoses due to ionizing radiation, unspecified**

**EK00**

**Allergic contact dermatitis**

Allergic contact dermatitis is an eczematous response provoked by a Type IV delayed immune reaction in the skin to a substance or substances to which the individual has previously been sensitized.

**Exclusions:** Irritant contact dermatitis (EK02)

Allergic contact sensitisation (EK12)

**Coded Elsewhere:** Allergic contact dermatitis of external ear (EG40.0)

Allergic contact gingivostomatitis (DA02.30)

**EK00.0**

**Allergic contact dermatitis due to clothing or footwear**

Allergic contact dermatitis due to exposure to allergens found in clothing and footwear: these include colophony, p-phenylenediamine (PPD), disperse dyes, potassium dichromate and formaldehyde resins.

**EK00.1**

**Allergic contact dermatitis due to cosmetics or fragrances**

Allergic contact dermatitis due to sensitisation to any of a large number of allergens which may be found in cosmetics and other products to which fragrances are added. Common allergens include colophony, fragrances such as hydroxycitronellal, emollients such as lanolin (wool wax alcohols), surfactants such as cocamidopropyl betaine, or preservatives such as isothiazolinones, parabens or formaldehyde-releasing agents. Fragrances are found in many household products as well as in cosmetics.

**EK00.2**

**Allergic contact dermatitis due to dental materials**

Allergic contact dermatitis due to sensitisation to agents used in dentistry. Dentists, dental nurses and dental technicians are generally at greater risk than their clients. Important allergens include acrylates and methacrylates, disinfectant aldehydes and fragrances.

**EK00.3**

**Allergic contact dermatitis due to food flavours or additives**

Allergic contact dermatitis due to flavouring agents (e.g. cinnamyl alcohol) and other food additives (e.g. ammonium persulfate, benzoic acid). Such agents may be encountered at work in food processing or preparation, or may rarely cause allergic contact cheilitis or stomatitis.

**EK01****Photo-allergic contact dermatitis**

Allergic contact dermatitis caused by sensitisation to a photoproduct of a compound either applied directly to the skin or taken up by the skin via the systemic circulation. The parent compound does not elicit an allergic reaction until it is chemically modified by exposure to ultraviolet radiation.

**EK02****Irritant contact dermatitis**

Irritant contact dermatitis is an eczematous reaction provoked by acute or prolonged and repeated contact with a substance or substances which are injurious to the skin. Common irritants include defatting agents (solvents, soaps and detergents), acids (both inorganic and organic) and alkalis (e.g. sodium hydroxide and wet cement).

**Exclusions:** Allergic contact dermatitis (EK00)

**EK02.0****Irritant contact dermatitis from specified external agents**

Irritant contact dermatitis from external agents grouped according to the type of causative agent.

**EK02.00****Irritant contact dermatitis due to wet work**

Irritant contact dermatitis caused by prolonged or repetitive wet work. It usually affects predominantly the skin of the hands and wrists but may affect other sites if clothing is repeatedly drenched. Although water and sweat alone (especially from under occlusive protection gloves) may be responsible, the risk is increased by exposure to defatting agents and irritants including soaps, detergents and cooling fluids. It is seen commonly in those looking after dependent relatives, especially young mothers. Professions or occupational sectors where there are substantial risks include health care, hairdressing, cleaning, catering and food-processing.

**EK02.01****Irritant contact dermatitis due to solvents**

Irritant contact dermatitis caused by skin contact with solvents such as tetrachloroethylene, toluene, turpentine, acetone, methyl acetate, ethyl acetate, hexane, citrus terpenes or ethanol. These have numerous uses including in dry-cleaning chemicals, paint thinners, nail polish removers, glue solvents and perfumes. Occupations where there are substantial risks include painters and decorators, construction workers, dry-cleaners, machinists and workers in the chemical industry.

**EK02.02****Irritant contact dermatitis due to exposure to acids, alkalis or other specified chemical irritants****EK02.03****Irritant contact dermatitis due to cosmetics or emollients**

Irritant contact dermatitis caused by skin contact with cosmetics and emollients containing substances with irritant capacities such as fragrances, sodium lauryl sulfate, formaldehyde, alcohols, urea, lactic acid, enzymes or peeling particles.

Such sensitisation is normally acquired by prior contact of the skin or mucous membranes with the substance or with one chemically closely related to it (cross-reactivity). Subsequent contact with the substance may provoke an allergic reaction. In certain circumstances such sensitisation may prevent an individual from taking up or continuing employment where exposure to the allergen cannot be avoided. Some individuals sensitized to a specific allergen may, however, never experience symptoms on contact with it. |

| <b>EK70.0</b>  | <b>Epidermoid cyst</b><br>A cutaneous cyst with an epidermoid wall filled with keratin and its breakdown products. It most commonly forms as the result of squamous metaplasia in a damaged sebaceous gland but may result from trauma (traumatic inclusion cyst), especially when situated on the extremities. It typically presents as a spherical skin-coloured or yellowish nodule, often with a central pore opening onto the skin surface.<br><b>Inclusions:</b> Epidermal inclusion cyst |
| <b>EK70.00</b> | Infected epidermoid cyst<br>An epidermoid cyst which has become secondarily infected by, most commonly, <i>Staphylococcus aureus</i> . It manifests as pain, swelling and erythema of a preexisting cyst and is predisposed to rupture.                                                                                                                                                                                                                                                         |

**EK70.0Z** Epidermoid cyst, unspecified

**EK70.1 Trichilemmal cyst**

A trichilemmal (pilar) cyst is a common, typically non-tender, intradermal or subcutaneous cyst. The cysts are typically confined to the scalp and are often multiple. They usually occur sporadically but may be inherited in an autosomal dominant manner. They are derived from the outer root sheath of the hair follicle and as such contain keratin or keratin degradation products. Rarely, they may undergo malignant transformation.

**Inclusions:** Pilar cyst

**EK70.2 Digital myxoid pseudocyst**

Digital myxoid cysts (DMCs) are benign ganglion cysts of the digits, which typically present as a small dome-shaped, often translucent papule on the dorsum of the terminal phalanx and/or as longitudinal "guttering" of the nail plate which is focally compressed by the cyst as it develops from the underlying nail matrix. In the majority of cases a stalk connecting the cyst with the adjacent distal interphalangeal joint can be demonstrated, accounting for the alternative names of digital ganglion cyst and digital synovial cyst.

**Inclusions:** Digital ganglion cyst

**EK70.3 Hidrocystoma**

A hidrocystoma is a cystic cutaneous swelling lined by either apocrine or eccrine ductal epithelium. It presents typically as a small solitary bluish translucent papule on or around the eyelids. It is not always possible to be certain whether it is of apocrine or eccrine origin though the majority show apocrine differentiation.

**EK70.Y Other specified cutaneous cysts**

**EK70.Z Cutaneous cysts, unspecified**

**EK71 Skin tags or polyps**

Benign outgrowths of skin consisting of a fibrovascular core covered with normal or thinned epidermis. They may be single or multiple and range in diameter from less than a millimetre to a centimetre or more.

**EK71.0 Fibroepithelial polyp of skin**

A common polypoid, often pedunculated non-neoplastic benign skin growth consisting of a fibrovascular core covered with normal or thinned epidermis. If torsion of the stalk occurs they may become painful, swollen and necrotic.

**EK71.1 Multiple skin tags**

Very common non-neoplastic fibroepithelial skin growths ranging from less than one to several millimetres in diameter. They favour the neck and intertriginous areas and may be very numerous. They are associated with obesity, type II diabetes, insulin resistance and acanthosis nigricans.

**EK71.Z Polyp of skin not elsewhere classified**

## Disorders of the skin of uncertain or unpredictable malignant potential (EK90-EK92)

**Coded Elsewhere:** Neoplasms of uncertain behaviour of skin (2F72)

### **EK90**

#### **Actinic keratosis and other discrete epidermal dysplasias**

A group of conditions characterised by varying degrees of keratinocytic atypia resulting from damage to keratinocyte DNA. They carry a small propensity to develop into invasive squamous cell carcinoma.

#### **EK90.0**

##### **Actinic keratosis**

Actinic keratoses (AKs) are focal areas of abnormal keratinocyte proliferation and differentiation induced by chronic exposure to ultraviolet radiation. They are very common on sun-exposed skin of fair-skinned individuals who have had excessive exposure to sunlight. Initially flat scaly papules, they may become significantly elevated from the skin surface by producing dense adherent keratin or as a result of unregulated cellular proliferation which may progress to frank carcinoma in situ or invasive squamous cell carcinoma.

**Inclusions:** Solar keratosis

#### **EK90.1**

##### **Diffuse actinic keratinocyte dysplasia**

Diffuse actinic dysplasia develops after repeated exposure of skin to ultraviolet radiation, usually over decades, and results from cumulative DNA damage within the nuclei of epidermal keratinocytes. It is characterised initially by subtle diffuse skin changes including mottling, erythema, telangiectasia and irregular fine scaling. It is seen most commonly on the unprotected scalp skin of bald men. Histologically there are early signs of dysplasia in the basal epidermis. As damage accumulates the clinical changes become more pronounced with the formation of discrete actinic keratoses, from which intraepidermal or invasive squamous cell carcinoma may develop.

**Inclusions:** "Field change" due to chronic exposure to ultraviolet radiation

#### **EK90.Y**

##### **Other discrete epidermal dysplasias**

### **EK91**

#### **Dermatoses which may presage cutaneous lymphoma**

Dermatoses which may represent the earliest stages of cutaneous lymphoma but where it is not possible to confirm their neoplastic nature.

#### **EK91.0**

##### **Large plaque parapsoriasis**

Large plaque parapsoriasis is a chronic skin disorder characterised by the indolent development over years or decades of scaly patches or slightly elevated plaques which may be clinically indistinguishable from early mycosis fungoides but in which no evidence of infiltration by abnormal lymphocytes can be found. Approximately 10% of patients will, however, eventually progress to mycosis fungoides.

**EK91.1****Poikiloderma vasculare atrophicans**

Poikiloderma vasculare atrophicans is a cutaneous reaction pattern characterised by mottled hyper- and hypomelanosis, telangiectasia and progressive dermal and epidermal atrophy. It may manifest as a component of established mycosis fungoides but may precede the development of the latter by many years and, in some cases, may persist indefinitely without progression to frank lymphoma. It should be distinguished from other causes of poikiloderma such as may be seen with dermatomyositis.

**EK91.2****Primary cutaneous plasmacytosis**

A skin disorder resulting from focal or multifocal dense infiltration of the skin by plasma cell aggregates. It may be associated with high levels of serum IgG4. It typically presents as widespread reddish-brown papules, nodules and pigmented indurated plaques involving the trunk and limbs but may present as a single nodule or plaque. The majority of patients with this uncommon skin disorder are of East Asian descent. There is a risk of progression to systemic lymphoproliferative malignancy.

**EK92****Histiocytoses of uncertain malignant potential**

Disorders characterised by abnormal proliferation of dendritic cells and macrophages. The proliferation may or may not be clonal and the prognosis is unpredictable.

**Coded Elsewhere:** Langerhans cell histiocytosis (2B31.2)

Indeterminate cell histiocytosis (2B31.6)

## Cutaneous markers of internal disorders (EL10-EL3Y)

Acromegaly or pituitary gigantism (5A60.0)

Cholestatic pruritus (EC90.11)

Yellow nail syndrome (EE11.1)

Uraemic pruritus (EC90.10)

Nail-patella syndrome (LD24.J0)

Hairy leukoplakia (DA01.01)

Immune reconstitution inflammatory syndrome (4B23)

## Cutaneous markers of internal malignancy (EL10-EL1Y)

A range of generally uncommon skin signs which may point to the presence of an internal malignancy

### EL10

#### Paraneoplastic syndromes involving skin

**Coded Elsewhere:** Paraneoplastic pemphigus (EB40.2)

Thrombophlebitis migrans (BD70.2)

Paraneoplastic dermatomyositis (4A41.00)

Paraneoplastic hypertrophic osteoarthropathy (FB86.10)

### EL1Y

#### Other specified cutaneous markers of internal malignancy

---

### EL3Y

#### Other specified cutaneous markers of internal disorders

**Coding Note:** Code also the causing condition

## Postprocedural disorders of the skin (EL50-EL80)

This group of disorders incorporates drug eruptions, other cutaneous side effects of medication and adverse reactions to medical and surgical interventions.

### EL50

#### Unsatisfactory surgical scar of skin

A surgical skin scar with a poor functional or cosmetic outcome.

#### EL50.0

##### Keloidal surgical scar

A surgical scar which heals with an overgrowth of fibrous scar tissue which extends beyond the limits of the original surgical wound.

- EL50.1      Hypertrophic surgical scar**  
An elevated surgical scar containing an excess of fibrous tissue which, in contrast to a keloidal scar, does tend to flatten with time.
- EL50.2      Atrophic surgical scar**  
A surgical scar in which there is thinning of the skin giving it a wrinkled appearance.  
**Exclusions:**            Postinflammatory atrophic scarring of the skin (EE40.2)
- EL50.3      Expanded surgical scar**  
A widened surgical scar, often resulting from inadequate deep suturing or poor surgical technique. They are common in disorders of connective tissue such as Ehlers-Danlos syndrome.  
**Inclusions:**            Stretched scar
- EL50.Z      Unsatisfactory surgical scar of skin, unspecified**
- EL51      Cutaneous flap necrosis**  
Necrosis of surgical skin flap
- EL52      Myocutaneous flap necrosis**  
Necrosis of a surgical flap containing both skin and muscle
- EL53      Skin graft failure**  
Failure of skin graft tissue to engraft as intended
- EL54      Composite graft failure**  
Failure of composite graft tissue (e.g. skin and cartilage) to engraft as intended

Adverse cutaneous effects of therapeutic ionizing irradiation (EL60-EL63)

**Coded Elsewhere:** Oral mucositis due to radiotherapy (DA01.11)

Radiotherapy-induced xerostomia (DA02.1)

Scarring alopecia following radiotherapy (ED70.5Y)

Radiotherapy-induced skin malignancy (2C3Y)

- EL60      Acute radiodermatitis following radiotherapy**  
The reaction of the skin, and in particular the epidermis, to acute exposure to ionising radiation directed at the skin for therapeutic purposes. It manifests as inflammation, erosion and crusting.
- EL61      Chronic radiodermatitis following radiotherapy**  
The late cutaneous sequelae of the therapeutic use of ionising radiation. It may take five to ten years to develop and is characterised by cutaneous atrophy, fibrosis, dyspigmentation, alopecia and telangiectasia with associated damage to underlying subcutaneous fat.
- EL63      Radionecrosis of skin due to therapeutic ionizing irradiation**  
Necrosis and ulceration of skin attributable to radiotherapy

Complications of cutaneous cosmetic procedures (EL73-EL73.6)

**Coded Elsewhere:** Specified cutaneous complications of cosmetic procedures (EL73)

- EL73**      **Unsatisfactory outcome from cutaneous cosmetic surgical procedure**  
The outcome from a surgical intervention designed to improve cosmetic appearance which is considered by the practitioner who performed the procedure to be less satisfactory than anticipated.
- EL73.0**      **Adverse reaction to dermal or deep fillers**  
Any adverse event attributable to the use of injected fillers used for soft tissue augmentation.  
**Exclusions:**      Pyogenic abscess of the skin (1B75.3)
- EL73.1**      **Adverse reaction to chemical peel**  
Any adverse reaction attributable to the use of chemical peels on the skin for cosmetic enhancement. Examples include infection, chemical burns, pustular acneiform eruptions, dyspigmentation and scarring. The precise adverse reaction should be documented separately.
- EL73.2**      **Adverse reaction to injection of neurotoxin**  
Adverse event resulting from use of neurotoxins, especially botulinum toxin, into the skin. This is most commonly administered for aesthetic reasons. Recognised problems include ptosis, diplopia and hypersensitivity to the toxin. Details of the reaction should be coded separately.
- EL73.3**      **Unsatisfactory outcome from cosmetic laser surgery**  
The outcome from an intervention using lasers designed to improve cosmetic appearance which is considered by the practitioner who performed the procedure to be less satisfactory than anticipated.
- EL73.4**      **Hypomelanosis resulting from cosmetic procedure**  
Loss of skin pigmentation attributable to a cosmetic intervention and particularly associated with chemical peels.
- EL73.5**      **Dyspigmentation resulting from cosmetic procedure**  
Disturbed skin pigmentation following a cosmetic procedure
- EL73.6**      **Fibrosis or scarring following cosmetic procedure**  
Unsatisfactory scarring and fibrosis following a procedure designed to improve cosmesis.
- EL80**      **Adverse cutaneous effects of diagnostic procedures**  
Skin problems arising from diagnostic procedures. Examples would be radiation necrosis from prolonged fluoroscopy or anaphylaxis from use of radiocontrast media.  
**Coded Elsewhere:** Nephrogenic systemic fibrosis (FB51.Y)

---

**EM0Y**      **Other specified diseases of the skin**

**EM0Z**

**Skin disease of unspecified nature**

## CHAPTER 15

---

### Diseases of the musculoskeletal system or connective tissue

This chapter has 90 four-character categories.

Code range starts with FA00

This chapter contains diseases of musculoskeletal system and diseases of connective tissue.

**Exclusions:** Injury, poisoning or certain other consequences of external causes (Chapter 22)  
Endocrine, nutritional or metabolic diseases (Chapter 05)  
Complications of pregnancy, childbirth and the puerperium (Chapter 18)  
Certain infectious or parasitic diseases (Chapter 01)  
Temporomandibular joint disorders (DA0E.8)  
Certain conditions originating in the perinatal period (Chapter 19)

**Coded Elsewhere:** Neoplasms of the musculoskeletal system  
Monogenic autoinflammatory syndromes (4A60)  
Nonorgan specific systemic autoimmune disorders (4A40-4A4Z)  
Symptoms, signs or clinical findings of the musculoskeletal system (ME80-MF1Y)  
Structural developmental anomalies of the skeleton (LB70-LB9Z)  
Syndromes with connective tissue involvement as a major feature (LD28)  
Syndromes with skeletal anomalies as a major feature (LD24)

This chapter contains the following top level blocks:

- Arthropathies
- Conditions associated with the spine
- Soft tissue disorders
- Osteopathies or chondropathies
- Neoplasms of the musculoskeletal system

## Arthropathies (FA00-FA5Z)

### Osteoarthritis (FA00-FA0Z)

Osteoarthritis (OA) can be defined as a group of distinct, but overlapping diseases, which may have different etiologies, but similar biological, morphological, and clinical outcomes affecting the articular cartilage, subchondral bone, ligaments, joint capsule, synovial membrane, and periarticular muscles. OA is the most common joint disease in persons 65 years of age and above. Its etiology is not fully understood, although there are several related factors, such as female gender, genetics, metabolism, and excessive mechanical stress. The diagnosis of OA is primarily based on clinical history and physical examination. The cardinal radiographic features of OA are focal/non-uniform narrowing of the joint space in the areas subjected to the most pressure, subchondral cysts, subchondral sclerosis, and osteophytes.

| Primary osteoarthritis occurring in an otherwise intact knee joint, involving genetically related, age-related or use-related degeneration with microscopic and macroscopic anatomical changes, which ultimately limit motion in one or more joints. Changes to the joint include increasing cartilage loss and osseous transformation such as sclerosis, osteophyte formation and cysts as well as potential inflammatory changes in surrounding soft tissue structures. |                               |

#### Infection related arthropathies (FA10-FA1Z)

A disease of the joints, caused by an infection with a bacterial, viral, fungal, or parasitic source.

Distinction is made between the following types of etiological relationship.

- a) direct infection of joint, where organisms invade synovial tissue and microbial antigen is present in the joint;
- b) indirect infection, which may be of two types: a reactive arthropathy, where microbial infection of the body is established but neither organisms nor antigens can be identified in the joint, and a postinfective arthropathy, where microbial antigen is present but recovery of an organism is inconstant and evidence of local multiplication is lacking.

|               |                                                                                         |

| <b>FA10.2</b> | <b>Fungal infection of joint</b>                                                        |
| <b>FA10.Z</b> | <b>Direct infections of joint, unspecified</b>                                          |

**FA11****Reactive arthropathies**

A disease of the joints, caused by an infection in another part of the body, auto-immune disease, or post-vaccination. This disease is characterised by a secondary inflammation of the joints in reaction to infection, auto-immune disease, or vaccination. Common previous sites of infection are the enteric or genitourinary system.

**Coding Note:** Code also the underlying disease or aetiology.

**Exclusions:** Acute rheumatic fever (1B40-1B42)  
Behçet disease (4A62)

**Coded Elsewhere:** Arthritis mutilans (FA21.Y)

**FA11.0 Arthropathy following intestinal bypass**

**Coded Elsewhere:** Bowel-associated dermatosis-arthritis syndrome (EB2Y)

**FA11.1 Arthropathy following vaccination****FA11.2 Arthropathy following genitourinary infection**

Reactive arthritis (ReA) is an autoimmune disorder belonging to the group of seronegative spondyloarthropathies and is characterised by the classic triad of arthritis, urethritis and conjunctivitis.

**Coding Note:** Code also the causing condition

**FA11.Y Other specified reactive arthropathies**

**Coding Note:** Code also the underlying disease or aetiology.

**FA11.Z Reactive arthropathies, unspecified**

**Coding Note:** Code also the underlying disease or aetiology.

**FA12****Postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.0 Bacterial postinfectious arthropathy**

**Coding Note:** Code also the causing condition

**FA12.1 Viral postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.2 Fungal postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.3 Parasitic postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.Y Other specified postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.Z Postinfectious arthropathies, unspecified**

**Coding Note:** Code also the causing condition

**FA13 Infectious spondyloarthritis**

A condition of the spine, caused by an infection with a bacterial, viral, fungal, or parasitic source. This condition is characterised by inflammation of the vertebrae.

**Exclusions:** Inflammatory spondyloarthritis (FA92)

**FA1Y Other specified infection related arthropathies**

**FA1Z Infection related arthropathies, unspecified**

Inflammatory arthropathies (FA20-FA2Z)

**Coded Elsewhere:** Peripheral spondyloarthritis (FA92.1)

**FA20 Rheumatoid arthritis**

Rheumatoid arthritis (RA) is persistent and/or erosive disease that is defined as the confirmed presence of synovitis in at least 1 joint, absence of an alternative diagnosis that better explains the synovitis, and achievement of a total score of 6 or greater (of a possible 10) from the individual scores in 4 domains: number and site of involved joints, serologic abnormality, elevated acute-phase response, and symptom duration.

**Exclusions:** rheumatoid arthritis, juvenile (FA24.1)

Acute rheumatic fever (1B40-1B42)

**Coded Elsewhere:** Respiratory disorders in rheumatoid arthritis (CB05.1)

**FA20.0 Seropositive rheumatoid arthritis**

**FA20.1 Seronegative rheumatoid arthritis**

**FA20.Z Rheumatoid arthritis, serology unspecified**

**FA21 Psoriatic arthritis**

Psoriatic arthritis, a member of the spondyloarthritis family, is defined as an inflammatory arthropathy associated with psoriasis that is usually rheumatic factor negative. It is characterised by various clinical manifestations, including symmetric polyarthritis, asymmetric oligoarthritis or polyarthritis, spinal inflammation similar to ankylosing spondylitis, peripheral enthesitis, anterior chest wall involvement, distal interphalangeal arthritis of the hands and feet, dactylitis (sausage digit or toe), arthritis mutilans and onycho-pachydermo-periostitis. The CASPAR has high sensitivity and specificity.

**Exclusions:** Juvenile psoriatic arthritis (FA24.2)

**FA21.0 Psoriatic spondyloarthritis**

**Inclusions:** Psoriatic spondylitis

**FA21.Y Other specified psoriatic arthritis**

**FA21.Z Psoriatic arthritis, unspecified**

**FA22****Polymyalgia rheumatica**

Polymyalgia rheumatica (PMR) is a syndrome characterised by aching of the proximal portions of the extremities and torso. Provisional classification criteria for PMR by the European League Against Rheumatism/American College of Rheumatology Collaborative Initiative should be applied to patients aged 50 years or older with bilateral shoulder aching, and abnormal CRP and/or ESR. The scoring algorithm is based on morning stiffness >45 minutes (2 points), hip pain/limited range of motion (1 point), absence of rheumatoid factor and/or anti-citrullinated protein antibody (1 point), with optional ultrasound criteria. Most commonly, PMR occurs in isolation, but may be seen in 40-50% of patients with giant cell arteritis.

**Exclusions:** Giant cell arteritis with polymyalgia rheumatica (4A44.2)

**FA23****Adult-onset Still disease**

Adult onset Still's disease is a rare rheumatic condition characterised by a combination of symptoms, such as fever higher than 39 degrees C, cutaneous rash during fever peaks, joint or muscle pain, lymph node hypertrophy, increase of white blood cells (especially polymorphonuclear neutrophils) and abnormalities of liver metabolism.

**Exclusions:** Still disease NOS (FA24.4)

**FA24****Juvenile idiopathic arthritis**

Juvenile idiopathic arthritis (JIA) is the term used to describe a group of inflammatory articular disorders of unknown cause that begin before the age of 16 and last over 6 weeks. Six disorders have been defined: systemic-onset juvenile idiopathic arthritis (formerly referred to as Still's disease), oligoarticular arthritis, rheumatoid factor-positive polyarthritis, rheumatoid factor-negative polyarthritis, enthesitis-related arthritis (spondyloarthropathies), and the juvenile form of psoriatic arthritis (see these terms). A seventh category has been defined comprising unclassified types of arthritis (types that do not correspond to any of the defined disease or that correspond to more than one of the disease definitions).

**Coding Note:** Arthritis in children, with onset before 16th birthday and lasting longer than 6 weeks

**Exclusions:** Juvenile dermatomyositis (4A41.01)  
Felty syndrome (FA20.0)

**FA24.0****Juvenile idiopathic oligoarthritis**

Oligoarticular juvenile arthritis is the most common form of juvenile idiopathic arthritis, representing nearly 50% of cases. It is more common in girls (80% of cases), with onset occurring between ages 2 and 4. It is usually asymmetrical and affects between one and a maximum of four joints, predominantly those of the lower limbs (knee or foot).

**Coding Note:** Use additional code, if desired, to identify associated uveitis

**FA24.00**

Juvenile idiopathic oligoarthritis, onset persistent

Onset persistent refers to the fact that the child never has more than four joints involved throughout the course of the disease.

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>FA24.1</b>       | <p><b>Juvenile idiopathic polyarthritis</b></p> <p>Juvenile idiopathic polyarthritis is a type of juvenile idiopathic arthritis (JIA) that affects five or more joints in the first six months after onset. It often affects the same joints on each side of the body. It is more common in girls.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>FA24.2</b>       | <p><b>Juvenile psoriatic arthritis</b></p> <p>Juvenile psoriatic arthritis is an autoimmune inflammatory disorder representing less than 10% of all juvenile idiopathic arthritis (JIA) cases, and characterised by the association of psoriasis with one of two forms of arthritis: the association of psoriasis with an arthritis that most resembles oligoarticular arthritis with a risk of uveitis is more common in girls with onset at around 6 years of age, whereas the association of psoriasis with a form of arthritis that most resembles a spondyloarthropathy is most common in boys and manifests later.</p>                                                                                                                                                                                                                                                                  |
| <b>Coding Note:</b> | Use additional code to identify associated uveitis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>FA24.3</b>       | <p><b>Juvenile enthesitis related arthritis</b></p> <p>Enthesitis-related arthritis is a type of juvenile idiopathic arthritis (JIA) that represents the paediatric form of spondyloarthropathy in adults, but differs from it as the initial manifestations in the paediatric form are asymmetric oligoarticular arthritis of the lower limbs, associated with enthesitis. Axial manifestations (sacroiliac involvement) are present in only 25% of cases at onset but appear several years later in the disease course.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Coding Note:</b> | Use additional code to identify associated uveitis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>FA24.4</b>       | <p><b>Juvenile systemic arthritis</b></p> <p>Systemic-onset juvenile idiopathic arthritis represents 10-11% of cases of juvenile idiopathic arthritis (JIA) and is marked by the severity of the extra-articular manifestations (fever, cutaneous eruptions) and by an equal sex ratio. Fever peaks are associated with transient cutaneous eruptions and diffuse erythematosis or urticarial-like lesions. The presence of arthritis is essential for diagnosis but may appear later in the disease course. The number of sites affected is variable (mono-, oligo- or polyarthritis) affecting both the small and large joints in a nearly symmetrical manner. This characteristic diagnostic triad may also be associated with an adenopathy and hepatosplenomegaly. Visceral complications (pericarditis, pleural effusion or serous peritonitis with abdominal pain) may be present.</p> |

**FA25****Gout**

Gout is an acute or chronic arthropathy resulting from deposition of monosodium urate monohydrate crystals in joint tissues. It is strongly associated with hyperuricaemia, which may be secondary to certain drugs, poisons or lymphoproliferative disorders. Gout is definitively diagnosed by demonstration of urate crystals in aspirated synovial fluid in the absence of an alternative aetiology for arthritis. It may be associated with focal urate deposition in skin and subcutaneous tissue (tophaceous gout) and with urate nephropathy

**Exclusions:** Hyperuricaemia without signs of inflammatory arthritis or tophaceous disease (5C55)

**FA25.0****Primary gout**

Primary gout refers to those cases that appear to be innate, that are neither secondary to another acquired disorder nor a subordinate manifestation of an inborn error that leads initially to a major disease unlike gout. Although some cases of primary gout have a genetic basis, others do not.

**Inclusions:** Gouty bursitis  
Gouty arthropathy

**FA25.1****Secondary gout**

Secondary gout refers to those cases that develop during the course of another disease, or as a consequence of treatment with drugs. Secondary gout is associated with increased purine biosynthesis de novo, increased nucleic acid turnover, or decreased renal clearance of uric acid.

**Coding Note:** Code also the causing condition

**FA25.10** Lead-induced gout

**FA25.11** Drug-induced gout

**FA25.12** Gouty arthropathy due to enzyme defects or other inherited disorders

**Coding Note:** Code also the causing condition

**FA25.1Y** Other specified secondary gout

**Coding Note:** Code also the causing condition

**FA25.1Z** Secondary gout, unspecified

**Coding Note:** Code also the causing condition

**FA25.2 Gout without specification whether primary or secondary**

**FA25.20** Tophaceous gout

Tophi are precipitates of monosodium urate in the tissues of patients with hyperuricaemia and may be associated with other manifestations of hyperuricaemia including gouty arthropathy. They present particularly in the skin and subcutaneous tissue. One of the more common sites for them is the helix of the ear.

**FA25.2Y** Other specified gout without specification whether primary or secondary

**FA25.2Z** Gout, unspecified

**FA26****Certain specified crystal arthropathies**

**Exclusions:** Gout (FA25)

**FA26.0****Calcium pyrophosphate dehydrate deposition disease**

Familial calcium pyrophosphate deposition is a chronic inherited arthropathy characterised by chondrocalcinosis (cartilage calcification), often associated with recurrent acute calcium pyrophosphate crystal arthritis and polyarticular osteoarthritis.

**FA26.1****Hydroxyapatite deposition disease**

Calcium hydroxyapatite crystal deposition disease is characterised by the presence of basic calcium phosphate crystals - predominantly hydroxyapatite - in periarticular soft tissues, especially tendons. This entity is best recognised as "calcific tendinitis" at its most frequent site about the shoulder, but the disease involves numerous other sites and may be more appropriately termed calcific periarthritis.

**FA26.2****Chondrocalcinosis**

Chondrocalcinosis refers to radiographic calcification in hyaline and/or fibrocartilage and is not specific for CPPD or other particular crystal deposition disease. Familial CPPD deposition disease has been reported from many countries and some kindred have CPPD disease linked to ANKH mutation on chromosome 5p.

**Inclusions:** Familial chondrocalcinosis

**FA26.Y****Other specified crystal arthropathies****FA26.Z****Crystal arthropathies, unspecified****FA27****Certain specified inflammatory arthropathies**

**Exclusions:** cricoarytenoid arthropathy (CA0H)  
arthropathy NOS (FA38)

**FA27.0****Kashin-Beck disease**

Kashin-Beck disease (KBD) is a chronic, endemic osteochondropathy of unknown etiology. The disease is mainly distributed in a diagonal belt ranging from the northeast to the southwest of China, where the soil selenium content is low. Mineral deficiencies (e.g., selenium, iodine), fungal cereal contamination, and water contamination may be contributing factors to its etiology. The disease is manifested by arthritic pain, morning stiffness, enlarged and shortened fingers, deformed and enlarged joints, and limited motion of the joints in the extremities.

**FA27.1****Pigmented villonodular synovitis**

This condition is characterised by outgrowths of synovial membrane composed of villi and fibrous nodules and is histologically characterised by hemosiderin- and lipid-containing macrophages and multinucleated giant cells. It usually occurs in the knee and hip, and is often diagnosed by Magnetic Resonance Imaging.

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>FA27.2</b> | <b>Palindromic rheumatism</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|               | Palindromic rheumatism causes sudden attacks of joint pain and swelling, typically in the hands and feet. An episode may last from a few hours to several days. The frequency of attacks also varies. Between attacks, pain and swelling completely disappear, and the affected joints look normal on X-rays. It is likely that 30 to 50 percent of patients with palindromic rheumatism go on to develop rheumatoid arthritis, but the progression may take several years. |
| <b>FA27.3</b> | <b>Transient synovitis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**FA31****Other acquired deformities of limbs**

**Exclusions:** congenital: deformities and malformations of limbs  
(LB70-LB9Z)

Acquired deformities of fingers or toes (FA30)

congenital: absence of limbs (LB70-LB9Z)

Coxa plana (FB82.1)

Acquired absence of limb (QF00)

**FA31.0 Valgus deformity, not elsewhere classified**

**Exclusions:** Talipes calcaneovalgus (LB98.22)  
Metatarsus valgus (LB98.21)

**FA31.1 Varus deformity, not elsewhere classified**

**Exclusions:** Metatarsus varus (LB98.02)  
tibia vara (FB82.1)

**FA31.2 Flexion deformity****FA31.3 Acquired wrist drop****FA31.4 Acquired foot drop****FA31.5 Acquired pes planus**

**Exclusions:** Congenital pes planus (LB98.1)

**FA31.6 Acquired clawhand or clubhand****FA31.7 Acquired clawfoot or clubfoot**

**Exclusions:** congenital clubfoot - varus (LB98.0)  
congenital clubfoot - valgus (LB98.22)

**FA31.8 Acquired unequal limb length****FA31.Y Other specified acquired deformities of limbs****FA31.Z Acquired deformities of limbs, unspecified****FA32****Disorders of patella**

**Exclusions:** Dislocation of patella (NC93.1)

**Coded Elsewhere:** Chondromalacia patellae (FB82.00)

**FA32.0 Recurrent instability of patella****FA32.1 Patellofemoral disorders****FA32.Y Other specified disorders of patella****FA32.Z Disorders of patella, unspecified**

**FA33****Internal derangement of knee**

Internal derangement of the knee (IDK) is a chronic disorder of the knee due to a torn, ruptured or deranged meniscus of the knee, or a partial or complete cruciate rupture, with or without injury to the capsular ligament, resulting in ongoing or intermittent signs and symptoms such as pain, instability, or abnormal mobility of that knee.

If indicated that derangement is due to trauma, code to Injury, poisoning and certain other consequences of external causes, regardless of time past since injury.

**Exclusions:**

- recurrent dislocation or subluxation patella (FA32.0)
- Ankylosis of joint (FA34.4)
- deformity of knee (FA31)
- Injuries to the knee or lower leg (NC90-NC9Z)
- Disorders of patella (FA32)

**FA33.0 Cystic meniscus**

**FA33.1 Discoid meniscus**

**FA33.2 Derangement of meniscus due to old tear or injury**

**Inclusions:** Old bucket-handle tear

**FA33.3 Loose body in knee**

**FA33.4 Chronic instability of knee**

**Exclusions:** Recurrent instability of patella (FA32.0)

**FA33.40** Chronic instability of knee, medial collateral ligament or other or unspecified part of medial meniscus

**FA33.4Y** Other specified chronic instability of knee

**FA33.4Z** Chronic instability of knee, unspecified

**FA33.Y Other specified internal derangement of knee**

**FA33.Z Internal derangement of knee, unspecified**

**FA34****Certain specified joint derangements**

**Exclusions:**

- Temporomandibular joint disorders (DA0E.8)
- current injury - see injury of joint by body region (Chapter 22)

**FA34.0 Loose body in joint**

**Exclusions:** Loose body in knee (FA33.3)

**FA34.1 Disorder of ligament**

**Exclusions:**

- Chronic instability of knee (FA33.4)
- familial ligamentous laxity (LD28.1)

**FA37****Certain joint disorders, not elsewhere classified**

- Exclusions:** calcification of: tendon (FB40.3)  
 difficulty in walking (MB44.2)  
 abnormality of gait and mobility (MB44)  
 Acquired deformities of fingers or toes (FA30)  
 Other acquired deformities of limbs (FA31)
- Coded Elsewhere:** Pain in joint (ME82)  
 Stiffness of joint (ME85)

**FA37.0****Osteophyte****FA37.Y****Other specified certain joint disorders, not elsewhere classified****FA37.Z****Certain joint disorders, not elsewhere classified, unspecified****FA38****Arthropathy in diseases classified elsewhere**

**Coding Note:** Code also the causing condition

- Exclusions:** arthropathy in: haematological disorders (Chapter 03)  
 neuropathic spondylopathy (FB00-FB0Z)  
 psoriatic and enteropathic arthropathies juvenile (FA24.2)

**FA38.0****Diabetic arthropathy**

**Coding Note:** Code also the causing condition

- Exclusions:** Diabetic Charcot arthropathy (FA38.10)  
 Diabetic cheiroarthropathy (EE40-EE7Y)

**FA38.1****Neuropathic arthropathy**

Neuropathic arthropathy is a progressive destructive arthritis associated with loss of pain sensation, proprioception, or both. Normal muscular reflexes that modulate joint movement are decreased. Without these protective mechanisms, joints are subjected to repeated trauma, resulting in progressive cartilage and bone damage. Additional symptoms include skin changes, such as erythema, swelling, hyperpigmentation, or purpura and soft tissue ulcers over the affected area, as well as joint loosening or instability and joint deformities.

**Coding Note:** Use additional code, if desired, to identify neuropathy.

**FA38.10****Diabetic Charcot arthropathy**

Joint damage resulting from diabetic sensory polyneuropathy. This most commonly affects the ankle and foot in patients with longstanding diabetes mellitus.

**Coding Note:** Always assign an additional code for diabetes mellitus.

**FA38.1Y****Other specified neuropathic arthropathy**

**Coding Note:** Use additional code, if desired, to identify neuropathy.

**FA38.1Z****Neuropathic arthropathy, unspecified**

**Coding Note:** Use additional code, if desired, to identify neuropathy.

**FA38.2            Arthropathy in hypersensitivity reactions classified elsewhere**

**Coding Note:** Code also the causing condition

**FA38.3            Haemophilic arthropathy**

Joint destruction in the knees, shoulders, ankles, elbows, and hips is associated with haemophilia. The condition includes acute hemarthrosis, subacute or chronic arthritis, and end-stage haemophilic arthropathy. Nearly all patients with severe haemophilia A or B and half of patients with moderate disease activity experience hemarthrosis. Symptoms include joint pain, joint swelling, joint fibrosis, development of flexion deformities, and erosion of joint cartilage. Joints most commonly affected are knees, ankles, elbows, shoulders, and hips (in order of frequency). Bleeding into muscle and soft tissue also causes musculoskeletal dysfunction.

**Coding Note:** Code also the causing condition

**FA38.Y            Other specified arthropathy in diseases classified elsewhere**

**Coding Note:** Code also the causing condition

**FA38.Z            Unspecified arthropathy in diseases classified elsewhere**

**Coding Note:** Code also the causing condition

**FA3Z              Unspecified joint disorders and deformities of limbs**

**FA5Y              Other specified arthropathies**

**FA5Z              Arthropathies, unspecified**

## Conditions associated with the spine (FA70-FB1Z)

This is a group of conditions in which there is a deviation from or interruption of the normal structure or function of the spine.

**Coded Elsewhere:** Spinal pain (ME84)  
Neck syndrome (ME86.C)

### Structural disorders of spine (FA70-FA7Z)

**FA70              Spinal deformities**

**FA70.0           Kyphosis**

This is a curving of the spine that causes a bowing or rounding of the back, which leads to a hunchback or slouching posture.

**Exclusions:** Post radiation kyphosis (FC01.2)

**FA70.1           Scoliosis**

**Coded Elsewhere:** Post radiation scoliosis (FC01.5)  
Congenital scoliosis due to congenital bony malformation (LB73.25)

Degenerative condition of spine (FA80-FA8Z)

This is a disease characterised by degenerative changes in the intervertebral disc, vertebral end-plates and spinal joints due to aging or structural change.

|               |                                                                                                                                                                                                                                                                                                                                                                |

| <b>FA90.Z</b> | <b>Infection of vertebra, unspecified</b>                                                                                                                                                                                                                                                                                                                                                              |
| <b>FA91</b>   | <b>Infection of intervertebral disc</b><br>A condition of the intervertebral discs, caused by an infection with a bacterial, viral, fungal, or parasitic source. This condition commonly presents with fever, chills, headache, stiffness of the neck, or tingling sensations in the arms or legs. Confirmation is by identification of the infectious agent in a blood sample, or radiographic tests. |

**FA92****Inflammatory spondyloarthritis**

Inflammatory spondyloarthritis is a rheumatic disease referring to the group of inflammatory disorders affecting the lower limb, enthesitis, dactylitis, and uveitis. Clinical characteristics include typical patterns of peripheral arthritis (i.e., predominantly of the lower limb and asymmetric), absence of rheumatoid factor, absence of subcutaneous nodules and other extra-articular features of rheumatoid arthritis, overlapping extra-articular features of the group (e.g., anterior uveitis), and significant familial aggregation and association with HLA-B27.

**Exclusions:** Infectious spondyloarthritis (FA13)

**FA92.0****Axial spondyloarthritis**

**Inclusions:** Ankylosing spondylitis

**Exclusions:** Behçet disease (4A62)

**FA92.00**

Spinal enthesitis

**FA92.01**

Sacroiliitis, not elsewhere classified

Inflammation of the sacroiliac joint that may be related to local disease or systemic disease.

**FA92.0Y**

Other specified axial spondyloarthritis

**FA92.0Z**

Axial spondyloarthritis, unspecified

**FA92.1****Peripheral spondyloarthritis**

Experts from the Assessment of SpondyloArthritis international Society (ASAS) developed classification criteria for axSpA and peripheral SpA. These criteria were developed for patients with peripheral manifestations without back pain, arthritis, enthesitis or dactylitis plus SpA features.

**FA92.Y****Other specified inflammatory spondyloarthritis****FA92.Z****Inflammatory spondyloarthritis, unspecified****FA9Y****Other specified inflammation of spine****FA9Z****Inflammation of spine, unspecified**

Spondylopathies (FB00-FB0Z)

**Coded Elsewhere:** Infectious spondyloarthritis (FA13)

Collapsed vertebra, not elsewhere classified (FA72.4)

Nonunion after spinal arthrodesis (FC01.70)

**FB00****Ankylosis of spinal joint****FB0Y****Other specified spondylopathies****FB0Z****Spondylopathies, unspecified**

**FB10****Spinal instabilities**

**Exclusions:** Spondylolysis (FA81)

**FB1Y****Other specified conditions associated with the spine****FB1Z****Conditions associated with the spine, unspecified**

## Soft tissue disorders (FB30-FB6Z)

**Coded Elsewhere:** Diabetic radiculoplexoneuropathy (8B94)

Autoimmune neuritis (8E4A.1)

## Disorders of muscles (FB30-FB3Z)

**Exclusions:** Muscular dystrophy (8C70)

**Coded Elsewhere:** Foreign body granuloma of soft tissue, not elsewhere classified (FB56.0)

**FB30****Infectious myositis**

Infective myositis is an acute, subacute, or chronic infection of skeletal muscle and may be caused by a wide range of infecting organisms. Immunosuppression, particularly as the result of HIV infection, is an important predisposing factor.

**FB31****Calcification or ossification of muscle****FB31.0****Progressive osseous heteroplasia****FB31.1****Fibrodysplasia ossificans progressiva**

This is an extremely rare disease of the connective tissue where a mutation of the body's repair mechanism causes fibrous tissue (including muscle, tendon, and ligament) to be ossified when damaged.

**FB31.Y****Other specified calcification or ossification of muscle****FB31.Z****Calcification or ossification of muscle, unspecified****FB32****Certain specified disorders of muscle**

This is an impairment of health or a condition of abnormal functioning of the muscle that does not fit in another category.

**Exclusions:**

Alcoholic myopathy (8D44.1)

Myalgia (FB56.2)

Cramp or spasm (MB47.3)

Stiff person syndrome (8E4A.0)

Primary disorders of muscles (8C70-8C7Z)

**Coded Elsewhere:** Drug-induced myopathy (8C80)

Sarcoid myositis (4B20.Y)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FB32.0</b>  | <b>Diastasis of muscle</b><br>This is a pathological separation or tearing of muscle fibres from other muscle fibres, tendons or fascia                                                                                                                                                                                                                                                                                                                            |
| <b>FB32.1</b>  | <b>Spontaneous rupture of muscle</b><br>This is a spontaneous tearing or separation of muscle fibres from other muscle fibres and/or tendons in the absence of trauma.<br><br><b>Exclusions:</b> rupture of tendon (Chapter 22)<br>traumatic rupture of muscle - see injury of muscle by body region (Chapter 22)                                                                                                                                                  |

## Disorders of synovium or tendon (FB40-FB4Z)

This is a group of disorders which affect the synovial joint lining (synovium) and also tendons.

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**FB51.4 Retroperitoneal fibrosis**

Retroperitoneal fibrosis (RPF) is a disease characterised by the development of extensive proliferation of fibrous tissue in the retroperitoneum, resulting in entrapment and obstruction of retroperitoneal structures, notably the ureters. RPF can be classified as primary (idiopathic) meaning that the cause is not known or secondary. But its association with various immune-related conditions and response to immunosuppression have led to speculation regarding an autoimmune aetiology of idiopathic RPF. One-third of the cases are secondary to malignancy, medication, trauma, or certain infections.

**FB51.40 Primary retroperitoneal fibrosis**

This is the commonest form of retroperitoneal fibrosis. By definition, no associated trigger (e.g. drugs or malignancy) can be determined, although atherosclerosis of the abdominal aorta is often associated. It has been postulated that such atherosclerosis may be of aetiological significance in some cases.

**Coding Note:** Code also the causing condition

**FB53****Shoulder lesions**

This is a group of disorders which are normally characterised with shoulder pain and reduced range of motion of the shoulder girdle.

**Exclusions:** Rotator cuff tendonitis (FB40.3)  
Shoulder-hand syndrome (MG30.04)

**FB53.0 Adhesive capsulitis of shoulder**

This is a condition characterised by spontaneous onset of shoulder pain accompanied by progressive loss of active and passive ranges of motion.

**Inclusions:** Frozen shoulder

**FB53.1 Rotator cuff syndrome**

**Exclusions:** Rotator cuff tendonitis (FB40.3)

**FB53.2 Impingement syndrome of shoulder**

This is a clinical syndrome which occurs when the tendons of the rotator cuff muscles become irritated and inflamed as they pass through the subacromial space, the passage beneath the acromion. This can result in pain, weakness and loss of movement at the shoulder.

## Periarthritis of wrist

This disorder is characterised by inflammation of tissues around the joints of the wrist.

## Enthesopathies, unspecified

**Specified soft tissue disorders, not elsewhere classified**

This is a group of other disorders, which are not classified elsewhere, affecting tissues that connect, support, or surround other structures and organs of the body, not being bone.

brachial radiculitis NOS (8B93)  
lumbosacral radiculitis NOS (8B93)  
Mononeuropathy (8C10-8C1Z)  
radiculitis NOS (8B93)  
Sciatica (ME84.3)

Sciatica (ME84.3)

### Foreign body granuloma of soft tissue, not elsewhere classified

## Foreign body granuloma of skin (EH93.3)

### Residual foreign body in soft tissue

Foreign body granuloma of skin (EH93.3)  
Foreign body granuloma of soft tissue, not elsewhere  
classified (FB56.0)

Foreign body granuloma of soft tissue, not elsewhere  
classified (FB56.0)

## Myalgia

This is a disorder characterised by pain in a muscle or group of muscles.

Chronic primary musculoskeletal pain (MG30.02)  
Chronic secondary musculoskeletal pain (MG30.3)

Chronic secondary musculoskeletal pain (MG30.3)

**Hypertrophy of infrapatellar fat pad**

This is a hypertrophy of an intracapsular but extrasynovial structure limited by the inferior pole of the patella superiorly, the joint capsule and patellar tendon anteriorly, the proximal tibia and deep infrapatellar bursa inferiorly, and the synovium-lined joint cavity posteriorly.

## Pain in limb

Chronic primary limb pain (MG30.02)  
Chronic primary musculoskeletal pain (MG30.02)  
Chronic secondary musculoskeletal pain (MG30.3)

Chronic secondary musculoskeletal pain (MG30.3)

### Other specified soft tissue disorders

## Soft tissue disorders, unspecified

## Osteopathies or chondropathies (FB80-FB8Z)

**Coded Elsewhere:** Bone diseases with increased bone density (LD24.1)

Bone diseases with disorganised development of skeletal components (LD24.2)

Congenital vascular bone syndromes (LD26.6)

Tuberculosis of bones or joints (1B12.40)

Malignant otitis externa (AA02)

### **FB80**

#### **Certain specified disorders of bone density or structure**

**Exclusions:** Osteopoikilosis (LD24.11)

Osteopetrosis (LD24.10)

**Coded Elsewhere:** Osteogenesis imperfecta (LD24.K0)

#### **FB80.0**

##### **Fibrous dysplasia of bone**

Fibrous dysplasia of bone is a congenital non-hereditary benign bone disease, where normal bone is replaced by a fibrous-like tissue with immature osteogenesis. Bone lesions are mono- or polyostotic and may be associated with bone pain and fragility, leading to fractures. In some patients or bone sites, they are hypertrophic, and responsible for neurological complications.

#### **FB80.1**

##### **Skeletal fluorosis**

#### **FB80.2**

##### **Osteitis condensans**

#### **FB80.3**

##### **Hyperostosis of skull**

#### **FB80.4**

##### **Osteosclerosis**

#### **FB80.5**

##### **Solitary bone cyst**

A solitary bone cyst is a benign non-epithelial bone cavity that is asymptomatic and that is found most commonly in the second decade of life by chance. The long bones are most often affected, but cases involving the jaw bone have been reported.

**Exclusions:** solitary cyst of jaw (DA05)

#### **FB80.6**

##### **Aneurysmal bone cyst**

**Exclusions:** aneurysmal cyst of jaw (DA05)

#### **FB80.7**

##### **Malunion of fracture**

#### **FB80.8**

##### **Nonunion of fracture**

**Exclusions:** Pseudarthrosis after fusion or arthrodesis (FC01.0)

#### **FB80.9**

##### **Delayed union of fracture**

#### **FB80.A**

##### **Stress fracture, not elsewhere classified**

**Exclusions:** stress fracture of vertebra (FA72.3)

#### **FB80.B**

##### **Pathological fracture**

**Exclusions:** Collapsed vertebra, not elsewhere classified (FA72.4)

| <b>FB82.3</b>       | <b>Relapsing polychondritis</b><br>Relapsing polychondritis is a multisystem inflammatory disease of unknown aetiology affecting the cartilage. The disease is characterised by intermittent or fluctuant inflammatory manifestations due to inflammation of the cartilaginous structures, resulting in tissue damage and tissue destruction. Chondritis of auricular, nasal, tracheal cartilage predominates in this disease, suggesting response to tissue-specific antigens such as collagen II and cartilage matrix protein (matrillin-1). In about one third of patients, RP is associated with vasculitis (from isolated cutaneous leucocytoclastic vasculitis to systemic polyangiitis) and autoimmune rheumatic diseases (mainly rheumatoid arthritis and systemic lupus erythematosus). Haematological malignant diseases, gastrointestinal disorders and endocrine diseases may also occur. Functional and anatomical evaluation for upper and lower airway disease is essential in evaluation and management of the disease. |

### **FB85 Paget disease of bone**

A disorder characterised by pathologically excessive resorption of bone by multinucleated osteoclasts and abnormal modelling of disorganised, woven bone by osteoblasts with resultant bone vascularization, weakness, enlargement and deformity.

**Inclusions:** Osteitis deformans

|                     | Hypertrophic osteoarthropathy (HOA) is a syndrome of clubbing of the digits, subperiosteal new bone formation (periostitis) affecting the long bones, and arthritis. The primary hereditary form is associated with mutations in the HPGD gene. The secondary form may be secondary to a number of systemic disorders, most commonly as a paraneoplastic phenomenon related to bronchial carcinoma. |

# CHAPTER 16

---

## Diseases of the genitourinary system

This chapter has 119 four-character categories.

Code range starts with GA00

Any disease characterised by pathological changes to the genitourinary system.

- Exclusions:**
- Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Complications of pregnancy, childbirth and the puerperium (Chapter 18)
  - Certain infectious or parasitic diseases (Chapter 01)
- Coded Elsewhere:**
- Contact with health services for reasons associated with reproduction (QA20-QA4Z)
  - Predominantly sexually transmitted infections (1A60-1A9Z)
  - Symptoms, signs or clinical findings of the genitourinary system (MF30-MG0Y)
  - Female gonococcal pelvic inflammatory disease (1A71)

This chapter contains the following top level blocks:

- Diseases of the female genital system
- Diseases of the male genital system
- Disorders of breast
- Diseases of the urinary system
- Other conditions of the genitourinary system
- Postprocedural disorders of genitourinary system

## Diseases of the female genital system (GA00-GA6Z)

**Coded Elsewhere:** Certain specified disorders of genital development

Neoplasms of the female genital organs

Symptoms, signs or clinical findings involving the female genital system (MF30-MF3Y)

### Inflammatory disorders of the female genital tract (GA00-GA0Z)

**Exclusions:** those complicating: abortion or ectopic or molar pregnancy (JA00-JA0Z)

Infections of genitourinary tract in pregnancy (JA62)

Other infection during labour (JB0D)

Infections in the puerperium (JB40)

**Coded Elsewhere:** Endometriosis (GA10)

Adenomyosis (GA11)

## GA00

### Vulvitis

**Exclusions:** senile (atrophic) vaginitis (GA30.2)

**Coded Elsewhere:** Irritant contact dermatitis of vulva (EK02.13)

Genital warts of vulva (1A95.1)

Tuberculous ulceration of vulva (1B12.5)

### GA00.0

#### Acute vulvitis

**Exclusions:** Streptococcal cellulitis of skin (1B70.1)

Staphylococcal cellulitis of skin (1B70.2)

### GA00.1

#### Subacute, chronic or recurrent vulvitis

### GA00.2

#### Abscess of vulva

A condition of the vulva, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the vulva. This condition may present with pain and swelling of the vulva, pain on sexual intercourse, or fever. Confirmation is by gynaecological examination.

### GA00.3

#### Genital ulcer of vulva

Ulceration of the vulva of unknown or uncertain aetiology but where a sexually transmitted infection, especially Herpes simplex, primary syphilis or chancroid, is suspected. This is a provisional diagnosis which should be amended once the cause of the ulceration is known.

**Coding Note:** Code also the causing condition

### GA00.4

#### Vulvovaginal ulceration and inflammation

**Coded Elsewhere:** Vulvovaginal candidosis (1F23.10)

### GA00.40

Vulvovaginal ulceration

### GA00.4Y

Other specified vulvovaginal ulceration and inflammation

|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GA00.4Z</b>      | Vulvovaginal ulceration and inflammation, unspecified                                                                                                                                                                                                                                                                                                                                                                             |
| <b>GA01</b>         | <b>Inflammatory disorders of the uterus, except cervix</b><br>A spectrum of inflammations involving the Uterus and the supporting tissues. It is usually caused by an ascending infection of organisms from the endocervix. Such inflammation can lead to functional impairment and infertility.                                                                                                                                  |
| <b>GA01.0</b>       | <b>Acute inflammatory disease of uterus</b>                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>GA01.00</b>      | Acute endometritis<br>A disease of the endometrium, caused by an infection with a bacterial or viral source. This condition is characterised by fever, lower abdominal pain, abnormal vaginal bleeding, or vaginal discharge. Confirmation is by a pelvic exam and identification of the bacteria or virus from a cervical swab, endometrial biopsy, or laparoscopy.<br><b>Coded Elsewhere:</b> Tuberculous endometritis (1B12.5) |
| <b>GA01.01</b>      | Acute inflammatory disease of uterus with pyometra                                                                                                                                                                                                                                                                                                                                                                                |
| <b>GA01.0Z</b>      | Acute inflammatory disease of uterus, unspecified                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>GA01.1</b>       | <b>Chronic inflammatory disease of uterus</b><br>A condition characterised by inflammation of the uterus which lasts for more than 3 months.                                                                                                                                                                                                                                                                                      |
| <b>GA01.10</b>      | Chronic endometritis<br><b>Coded Elsewhere:</b> Tuberculous endometritis (1B12.5)                                                                                                                                                                                                                                                                                                                                                 |

| <b>GA03</b>   | <b>Diseases of Bartholin gland</b><br>Any disease characterised by inflammation of the Bartholin gland.                                                                                                                                                                                                                                                                                                                                                  |
| <b>GA03.0</b> | <b>Abscess of Bartholin gland</b><br>A condition of the Bartholin gland, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by focal accumulation of purulent material in the Bartholin gland, located on either side of the vaginal opening. This condition may present with swelling on either side of the vagina, pain on sexual intercourse, or fever. Confirmation is by gynaecological examination. |
| <b>GA03.1</b> | <b>Cyst of Bartholin gland</b><br>A condition of the vagina, caused by growth of a flap of skin, occlusion of the Bartholin duct due to mucus, or infection. This condition is characterised by the accumulation of mucus or clear fluid in a closed sac-like structure that forms on (or from) one of the Bartholin glands or its ducts. This condition is commonly asymptomatic, but may become painful if the cyst becomes enlarged or infected.      |

| <b>GA10.C1</b> | Endometriosis of intestine<br>Endometriosis situated inside the bowel wall at or below the subserosal level, excluding superficial serosal lesions that are still classified as peritoneal endometriosis. Mostly affecting rectosigmoid area, but can be found also in other parts of the bowel system.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>GA10.C2</b> | Endometriosis of pelvic peritoneum<br>A condition that is frequently idiopathic. This condition is characterised by ectopic growth and function of endometrial tissue extending 5 millimetres or less under the visceral or parietal pelvic peritoneal surface and appearing as black-brown or light red-orange lesions. This condition may be associated with remaining vestigial tissue from the wolffian or mullerian duct, or fragments endometrium refluxed backward into the peritoneal cavity during menstruation. This condition may also present with dysmenorrhoea, dyspareunia, nonmenstrual pelvic pain, infertility, alteration of menses, or may be asymptomatic. Confirmation is by laparoscopy and histological identification of ectopic fragments. |
| <b>GA10.C3</b> | Peritoneal pockets due to endometriosis<br>Peritoneal pockets usually observed in the cul-de-sac, may occur in other parts of the female pelvis, also known as Allen-Masters defect. Can be asymptomatic or harbour microscopic endometriosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**GA10.DZ** Endometriosis of unspecified site in the urinary system

**GA10.E** **Endometriosis of the circulatory system**

**GA10.F** **Endometriosis of the nervous system**

**GA10.G** **Thoracic endometriosis**

Thoracic endometriosis lesions can affect the diaphragm, pleura, lung and bronchi. There may be a greater affinity for the right hemi thorax, and the parenchyma is more commonly affected in the lower lobes. Macroscopically, the endometriotic implants appear as brown–yellow and sometimes red nodules surrounded by neovascularization. Symptoms include: dyspnea, shortness of breath, rapid heartbeat, coughing up blood and a variety of pain patterns to include scapula, chest, ipsilateral neck and shoulder, upper abdominal and epigastric. Thoracic endometriosis may present with catamenial pneumothorax (recurrent pneumothorax occurring within 72 hours of menstruation), haemoptysis in case of bronchial location, haemothorax, pericardial effusions. A diagnosis of thoracic endometriosis is simple when both endometrial stroma and gland are present. In cases of endometriosis with stroma only, a further classification of “aggregated pattern”, in which immunohistochemistry is ER-, PR- and CD10-positive might be necessary for diagnosis.

**Exclusions:** Endometriosis of the heart (GA10.E)

**GA10.H** **Endometriosis in cutaneous scar**

**GA10.J** **Endometriosis-related adhesions**

**GA10.Y** **Endometriosis of other specified sites**

**GA10.Z** **Endometriosis of unspecified site**

**GA11**

**Adenomyosis**

A condition of the uterus characterised by endometrial tissue growth in the myometrium, hypertrophy of the myometrium, and heavy or prolonged menstrual bleeding, dysmenorrhoea, dyspareunia, bleeding between menstruation, or infertility; it can also be asymptomatic. Confirmation is by histopathology or ultrasound.

**Exclusions:** Leiomyoma of uterus (2E86.0)

## Noninflammatory disorders of female genital tract (GA12-GA1Z)

Any disorder of the female genital tract, characterised by pathological changes, leading to noninflammatory effects.

**Coded Elsewhere:** Congenital abnormalities of vulva or perineum

Congenital abnormalities of vagina

Congenital abnormalities of cervix uteri

Congenital abnormalities of uterus, except cervix

Congenital abnormalities of fallopian tube

Congenital abnormalities of ovary

Congenital abnormalities of broad ligament

Endometriosis (GA10)

Adenomyosis (GA11)

### GA12

#### Dyspareunia

A symptom of the genital system affecting females, caused by physical determinants. This symptom is characterised by recurrent genital pain or discomfort that occurs before, during, or after sexual intercourse, or superficial or deep vaginal penetration that is related to an identifiable physical cause, not including lack of lubrication. Confirmation is by medical assessment of physical causes.

**Exclusions:** Sexual pain-penetration disorder (HA20)

### GA13

#### Acquired abnormalities of vulva or perineum

Any condition of the vulva and perineum, caused by determinants arising after birth. These conditions are characterised by a malfunction, malformation, or another anomaly of the vulva and perineum.

#### GA13.0

##### Polyp of vulva

#### GA13.1

##### Low grade squamous intraepithelial lesion of vulva

A condition of the vulva, characterised by lesion of the squamous vulvar intraepithelial cells, leading to unspecified grade or severity of dysplasia and varying degrees of atypia of the cells. This condition is associated with smoking and immunosuppression, or conditions such as human papillomavirus, chronic vulvar irritation, or herpes simplex virus type 2. Confirmation is by tissue biopsy.

**Exclusions:** Genital warts of vulva (1A95.1)

Squamous cell carcinoma of vulva (2C70.2)

High grade squamous intraepithelial lesion of vulva, HPV-associated (2E67.13)

Vulvar intraepithelial neoplasia, HPV-independent (2E67.12)

#### GA13.2

##### Hypertrophy of vulva

A condition of the vulva that is frequently idiopathic. This condition is characterised by enlargement or thickening of the tissues of all or part of the female external genitalia, such as the clitoris, labia, vestibule, or glands. This condition may also present with a patchy white discolouration, itching, pain or burning of the skin.

| <b>GA14.1</b> | <b>Haematocolpos</b><br>A condition of the vagina, caused by an outflow vaginal obstruction. This condition is characterised by the presence of blood in the vagina.                                                                                                                                                                                                          |
| <b>GA14.2</b> | <b>Vaginal foreign body</b><br>A condition of the vagina, caused by foreign bodies lodged into the vaginal canal. This condition is characterised by vaginitis, vaginal bleeding, foul-smelling and purulent vaginal discharge, abdominal pain, and supra-pubic pain. This condition may also present with dysuria or infection.                                              |
| <b>GA14.3</b> | <b>Vaginal haematoma</b><br>A condition of the vagina, caused by trauma, commonly subsequent to childbirth, sexual abuse, or forceful impact. This condition is characterised by a localised collection of extravasated blood vessels and significant bruising. This condition may also present with pain, swelling, ecchymosis and urinary retention.                        |

|               |                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GA14.5</b> | <b>Leukoplakia of vagina</b>                               | A condition of the vagina, caused by hyperkeratinisation of epithelial cells due to human papillomavirus (HPV) infection, chronic trauma, radiotherapy, or premalignant/malignant lesions. This condition is characterised by white, whitish yellow, or grey plaque on the mucosal surfaces in the vagina.                                                                                                                     |

**GA30****Menopausal or certain specified perimenopausal disorders**

Any disorder affecting females, characterised by pathological changes during the menopausal and perimenopausal periods.

**Coded Elsewhere:** Postprocedural ovarian failure (5D44)

Menopausal symptom or complaint (MF32)

**GA30.0****Menopause**

A condition affecting females, caused by the loss of ovarian follicular function and decline in circulating blood oestrogen levels. This condition is characterised by the cessation of menstruation, hot flushes, atrophic genital changes, psychophysiological effects, and bone loss. Confirmation is by taking a patient history to determine psychophysiological effects such as the presence of amenorrhoea, and identification of hypooestrogenaemia and elevated serum FSH levels in a blood sample.

**Coded Elsewhere:** Contact with health services for menopausal counselling (QA4B)

**GA30.00****Menopausal or female climacteric states**

Any condition of the genital system affecting females, caused by pathological changes associated with the perimenopausal period, such as the permanent cessation of menstruation and infertility.

**Coding Note:**

Includes: Symptoms such as flushing, sleeplessness, headache, lack of concentration, associated with menopause

**Exclusions:** States associated with artificial menopause (GA30.3)

**GA30.01****Menopausal transition**

A condition affecting females, caused by gradual loss of ovarian follicular function and decline in circulating blood estrogen levels. This condition is characterised by infrequent or irregular menstrual bleeding, alterations in the functioning of the ovary, and gradual atrophic genital changes, psychophysiological effects. Confirmation is by taking a patient history to determine psychophysiological effects.

**GA30.02****Excessive bleeding in the premenopausal period**

aka "menorrhagia", excessive uterine bleeding during MENSTRUATION

**GA30.0Y****Other specified menopause****GA30.0Z****Menopause, unspecified****GA30.1****Postmenopausal uterine bleeding**

A condition of the genital system, caused by polyps, endometrial atrophy, hyperplasia, or cancer. This condition is characterised by abnormal uterine bleeding subsequent to the completion of menopause.

**Exclusions:** that associated with artificial menopause (GA30.3)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>GA30.2</b> | <b>Postmenopausal atrophic vaginitis</b><br>A condition of the vagina, caused by decreased oestrogen levels during the menopausal period. This condition is characterised by inflammation of the vagina and outer urinary tract, thinning and drying of the vaginal tissues, decreased lubrication, vaginal burning or dryness, shortening and tightening of the vaginal canal, or urinary incontinence after menopause.<br><i><b>Exclusions:</b></i> States associated with artificial menopause (GA30.3)                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>GA30.3</b> | <b>States associated with artificial menopause</b><br>Any condition caused by the artificial cessation of menstruation induced by surgical or pharmacological effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>GA30.4</b> | <b>Menopausal hot flush</b><br>A condition affecting females, caused by hormonal changes associated with menopause. This condition is characterised by recurrent and transient periods of flushing, sweating, and a systemic sensation of heat. This condition may also present with palpitations, anxiety, or periods of heat followed by chills.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>GA30.5</b> | <b>Menopausal osteoporosis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>GA30.6</b> | <b>Premature ovarian failure</b><br>Menopause occurring spontaneously before 40 years of age, generally resulting in secondary amenorrhea although some women may exhibit intermittent ovarian function and ovulation, with a minority conceiving and delivering a pregnancy. POF/POI occurs mostly without a known cause, but can be caused by the following conditions: numerical and structural chromosomal abnormalities, Fragile X (FMR1) premutations, autoimmune disorders, radiation therapy, chemotherapy, galactosemia, and other rare enzyme defects or mutations. To be subdivided in 4 categories according to cause: congenital, acquired, iatrogenic and unknown<br><i><b>Exclusions:</b></i> Isolated gonadotropin deficiency (5A61.0)<br>Postprocedural ovarian failure (5D44)<br><i><b>Coded Elsewhere:</b></i> Primary amenorrhoea (GA20.00)<br>Secondary amenorrhoea (GA20.01) |
| <b>GA30.Y</b> | <b>Other specified menopausal and perimenopausal disorders</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>GA30.Z</b> | <b>Menopausal and perimenopausal disorders, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**GA31****Female infertility**

Disease of the reproductive system defined by the failure to achieve a clinical pregnancy after 12 months or more of regular unprotected sexual intercourse.

**Inclusions:** inability to achieve a pregnancy

**Exclusions:** relative infertility (GA33)

Male infertility (GB04)

**Coded Elsewhere:** Contact with health services for preconception counselling (QA33)

Contact with health services for fertility preservation counselling (QA34)

Contact with health services by gestational carrier (QA35)

Female hypofertility in classical cystic fibrosis (CA25.0)

Female hypofertility in atypical cystic fibrosis (CA25.1)

Contact with health services for preimplantation genetic diagnosis (QA3Y)

Contact with health services for preimplantation genetic screening (QA3Y)

**GA31.0****Primary female infertility**

Infertility in a woman who has never had a clinical pregnancy

**GA31.00**

Primary female infertility of uterine origin

Female infertility caused by uterine abnormalities on the level of the endometrium or myometrium, with more detailed description classified elsewhere, i.e. under genitourinary infections, STDs and noninflammatory benign gynaecological disease

**Coding Note:**

Code also the causing condition

**GA31.01**

Primary female infertility of tubal origin

Female infertility caused by dysfunction of one or both fallopian tubes, usually related to pelvic adhesions or occurring after pelvic surgery, with or without hydrosalpinx

**Coding Note:**

Code also the causing condition

**GA31.0Y**

Primary female infertility of other specified origin

**GA31.0Z**

Primary female infertility of unspecified origin

**GA31.1****Secondary female infertility**

Infertility in a woman who has had at least one clinical pregnancy

**GA31.10**

Secondary female infertility of uterine origin

**GA31.11**

Secondary female infertility of tubal origin

**GA31.1Y**

Secondary female infertility of other specified origin

**GA31.1Z**

Secondary female infertility of unspecified origin

**GA31.Z**

**Female infertility without specification whether primary or secondary**

**GA32****Complications associated with medically assisted reproduction**

Any complication caused by or subsequent to any intervention used to achieve pregnancy by artificial or partially artificial means.

**GA32.0****Ovarian hyperstimulation syndrome**

A disease of the endocrine system, caused by elevated human chorionic gonadotropin hormone, commonly after the use of injectable fertility treatments. This disease is characterised by ovarian enlargement, and hemodynamic or metabolic complications. This disease may also present with abdominal pain, abdominal bloating, or weight gain depending on graded symptoms.

**Inclusions:** Hyperstimulation of ovaries associated with induced ovulation

**GA32.1****Bleeding after egg retrieval**

Significant bleeding after egg retrieval requiring hospitalization for blood transfusion, surgical intervention, clinical observation or other medical procedure

**GA32.2****Infection associated with medically assisted reproduction**

Significant genital or pelvic infection occurring after egg retrieval or other treatment with medically assisted reproduction

**GA32.3****Complications of attempted embryo transfer or medically assisted insemination**

Any complication caused by or subsequent to any attempted embryo transfer or medically assisted sperm insemination procedure.

**GA32.Y****Other specified complications associated with medically assisted reproduction****GA32.Z****Complications associated with medically assisted reproduction, unspecified****GA33****Recurrent pregnancy loss**

**Exclusions:** currently pregnant (Chapter 18)  
with current abortion (JA00-JA0Z)

**GA34****Female pelvic pain associated with genital organs or menstrual cycle**

A symptom affecting females, characterised by pain in the pelvic region associated with any of the genital organs or the menstrual cycle.

**Exclusions:** Chronic primary visceral pain (MG30.00)  
Chronic secondary visceral pain (MG30.4)

**Coded Elsewhere:** Interstitial cystitis (GC00.3)

**GA34.0****Pain related to vulva, vagina or pelvic floor**

A condition affecting females, characterised by any type of pain associated with the vulva, vagina, and pelvic floor tissues, either during sexual intercourse, physical activity, or rest.

**Exclusions:** Chronic primary visceral pain (MG30.00)  
Chronic secondary visceral pain (MG30.4)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>GA34.00</b> | <p>Vulval pain</p> <p>A symptom of vulval pain affecting females, caused by trauma, infection, injury, inflammation, or hypersensitivity of the nerve fibres. This symptom is characterised by any type of pain in the vulva, during sexual intercourse, physical activity, or rest.</p> <p><b>Exclusions:</b>           Chronic primary visceral pain (MG30.00)<br/> Chronic secondary visceral pain (MG30.4)</p>                                                                                                                                                                                                                                                                                              |
| <b>GA34.01</b> | <p>Perineal pain</p> <p>A symptom of perineal pain affecting females, caused by trauma, infection, injury, inflammation, or hypersensitivity of the nerve fibres. This symptom is characterised by any type of pain in the area between the posterior lip of the vaginal introitus and the anus, during sexual intercourse, physical activity, or rest.</p> <p><b>Exclusions:</b>           Chronic primary visceral pain (MG30.00)<br/> Chronic secondary visceral pain (MG30.4)</p>                                                                                                                                                                                                                           |
| <b>GA34.02</b> | <p>Vulvodynia</p> <p>Vulvodynia describes a chronic sensation of pain, burning or rawness of vulval skin which cannot be ascribed to any specific cause and persists for at least three months. Symptoms may be diffuse and unprovoked (dysaesthetic vulvodynia) or localised, usually to the vulval vestibule, and provoked by touch (vestibulodynia). Dysaesthetic vulvodynia characteristically occurs in postmenopausal women who are often not sexually active: pain is spontaneous and often occurs independently of touch. Vestibulodynia occurs typically in younger women and is characterised by vestibular tenderness to touch, erythema of the vestibular epithelium and secondary dyspareunia.</p> |

- GA34.20**      Cyclic pelvic pain
- A symptom affecting females, caused by gynaecological and physiological aspects associated with the menstrual cycle such as dysmenorrhoea or mittelschmerz. This symptom is characterised by recurrent pain in the pelvis, anterior abdominal wall, lower back, or buttocks, associated with a specific moment or period of time.
- Exclusions:**              Chronic primary visceral pain (MG30.00)  
                                     Chronic secondary visceral pain (MG30.4)
- GA34.21**      Noncyclic pelvic pain
- A symptom affecting females, caused by gynaecological and physiological aspects not associated with the menstrual cycle. This symptom is characterised by chronic pelvic pain in the pelvis, anterior abdominal wall, lower back, or buttocks, not associated with a specific moment or period of time.
- Exclusions:**              Chronic primary visceral pain (MG30.00)  
                                     Chronic secondary visceral pain (MG30.4)
- GA34.2Z**      Female pelvic pain, unspecified
- GA34.3**        **Dysmenorrhoea**
- A condition of the genital system affecting females, caused by endometriosis, adenomyosis, ovarian cysts, or may be idiopathic. This condition is characterised by cyclic pelvic pain preceding or accompanying menstruation that interferes with daily activities, lower, umbilical, or suprapubic abdominal pain, such as sharp, throbbing, burning, or shooting pains that may extend to the thighs and lower back.
- GA34.4**        **Premenstrual disturbances**
- GA34.40**      Premenstrual tension syndrome
- A syndrome affecting females that is frequently idiopathic. This syndrome is characterised by certain environmental, metabolic, or behavioural factors that occur during the luteal phase of the menstrual cycle, and leads to cyclic emotional, physical, or behavioural symptoms that interfere with an individual's lifestyle. Confirmation is by documentation of specific cyclic symptoms associated with the luteal and menstrual phases of the cycle (from a prospective symptom diary), and evidence of socioeconomic dysfunction.
- Exclusions:**              Premenstrual dysphoric disorder (GA34.41)
- Coded Elsewhere:** Premenstrual symptom or complaint (MF33)

| <b>GA34.41</b> | <p>Premenstrual dysphoric disorder</p> <p>During a majority of menstrual cycles within the past year, a pattern of mood symptoms (depressed mood, irritability), somatic symptoms (lethargy, joint pain, overeating), or cognitive symptoms (concentration difficulties, forgetfulness) that begin several days before the onset of menses, start to improve within a few days after the onset of menses, and then become minimal or absent within approximately 1 week following the onset of menses. The temporal relationship of the symptoms and luteal and menstrual phases of the cycle should ideally be confirmed by a prospective symptom diary over at least two symptomatic menstrual cycles. The symptoms are severe enough to cause significant distress or significant impairment in personal, family, social, educational, occupational or other important areas of functioning and do not represent the exacerbation of a mental disorder.</p> <p><b>Inclusions:</b> PMDD - [premenstrual dysphoric disorder]</p> <p><b>Exclusions:</b> Premenstrual tension syndrome (GA34.40)</p> |

Dermatoses of female genitalia (GA40-GA4Y)

**Coded Elsewhere:** Malignant neoplasms of vulva (2C70)

Carcinoma in situ of vulva (2E67.1)

Vulval melanotic macule (ED61.11)

Heterotopic sebaceous glands of vulva (ED91.0)

**GA40**

**Inflammatory dermatoses of the vulva**

**Coded Elsewhere:** Dermatitis or eczema of female genitalia (EA87.1)

Lichen sclerosus of vulva (EB60.0)

Vulval psoriasis (EA90.53)

**GA41**

**Ulcerative or erosive disorders of the vulva**

**Coded Elsewhere:** Genital ulcer of vulva (GA00.3)

Herpes simplex infection of vulva (1A94.0)

Erosive lichen planus of vulva or vagina (EA91.3)

Ulceration of vulva due to Behçet disease (4A62)

Vulval pemphigus (EB40.0Y)

Mucous membrane pemphigoid of vulval mucosa (EB41.1)

**GA41.0**

**Vulval aphthosis**

Vulval aphthae are vulval ulcers not attributable to infection or other identifiable cause. They typically occur on the medial aspects of the labia minora in young females (second decade of life). They may be associated with fever and malaise or with oral aphthae.

**GA41.Y**

**Other specified ulcerative or erosive disorders of the vulva**

**GA42**

**Sensory disturbance of the vulva**

Disorders characterised by vulval pruritus, dysaesthesia or pain.

**Coded Elsewhere:** Lichen simplex of vulva (EA83.00)

Vulvodynia (GA34.02)

**GA42.0**

**Vulval pruritus**

Intense itching of the external female genitalia.

**GA4Y**

**Other specified dermatoses of female genitalia**

**GA6Y**

**Other specified diseases of the female genital system**

**GA6Z**

**Diseases of the female genital system, unspecified**

## Diseases of the male genital system (GA80-GB0Z)

Any disease characterised by pathological changes to the male genital system.

**Coded Elsewhere:** Neoplasms of the male genital organs

Ejaculatory dysfunctions (HA03)

Problems of male genital organs (MF40)

Penoscrotodynia (EC92.0)

Structural developmental anomalies of the male genital system (LB50-LB5Z)

Symptoms, signs or clinical findings involving the male genital system (MF40-MF4Y)

Herpes simplex infection of genitalia or urogenital tract (1A94.0)

Dermatoses of male genitalia (GA80-GA81.Y)

**Coded Elsewhere:** Inflammatory dermatoses affecting the penis or scrotum

Premalignant or malignant disorders of the penis or scrotum

Balanoposthitis (GB06.0)

### GA80

#### Ulcerative disorders of the penis or scrotum

**Coded Elsewhere:** Herpes simplex infection of penis (1A94.0)

Mucous membrane pemphigoid of penile mucosa (EB41.1)

Ulceration of penis or scrotum due to Behçet disease (4A62)

Necrotising fasciitis of the scrotum, penis or perineum (1B71.1)

Amoebiasis of penis (1A36.1Y)

#### GA80.0

##### Aphthosis of penis or scrotum

Genital aphthosis in men is a non-infective but often painful ulceration of penile, scrotal or perigenital skin. It may be associated with oral ulceration (orogenital aphthosis) or with Behçet disease but may occur on its own. Both genital and orogenital aphthosis may represent formes frustes of Behçet disease.

**Inclusions:** Genital aphthosis in the male

#### GA80.1

##### Ulcer of penis of uncertain nature

**Exclusions:** Syphilitic chancre of penis (1A61.0)

Penile chancroid (1A90)

Herpetic ulcer of penis (1A94.0)

Penile aphthosis (GA80.0)

Ulceration of penis or scrotum due to Behçet disease (4A62)

#### GA80.Y

##### Other specified ulcerative disorders of penis and scrotum

**GA81****Miscellaneous dermatoses of male genitalia**

**Coded Elsewhere:** Lichen simplex of male genitalia (EA83.01)

Penile melanotic macule (ED61.10)

Heterotopic sebaceous glands of penis (ED91.0)

Angiokeratoma of the scrotum (EF20.1)

Burning scrotum (EC92.0)

Genitoperineal median raphe cyst (LB5Y)

**GA81.0****Penoscrotal pruritus**

An intense itching sensation that produces the urge to rub or scratch the skin of the scrotum and/or base of the penis to obtain relief.

**GA81.Y****Other specified dermatoses of male genitalia**

Diseases of prostate (GA90-GA91.Z)

**Coded Elsewhere:** Tuberculosis of prostate (1B12.5)

**GA90****Hyperplasia of prostate**

A condition of the prostate, caused by an increased rate of cellular division of the glandular and stromal cells. This condition is characterised by enlargement of the prostatic tissue, dysuria, urinary urgency, nocturia, weak urine stream, straining while urinating, incomplete bladder emptying during urination, or increased frequency of urinary tract infection.

**Inclusions:** Adenofibromatous hypertrophy of prostate

**Exclusions:** Benign neoplasms of prostate (2F34)

**GA91****Inflammatory and other diseases of prostate**

Any disease caused by obstruction of the prostate gland. These diseases are characterised by a build-up of secretions and inflammation of the prostate.

**Coded Elsewhere:** Gonococcal prostatitis (1A70.Y)

Prostatitis due to *Trichomonas vaginalis* (1A92)

**GA91.0****Chronic prostatitis**

A condition caused by obstruction of the prostate glands. This condition is characterised by inflammation of the prostate gland, dysuria, pollakiuria, urinary urgency, genital pain, lower back pain, abdominal pain, and repeated bladder infections that last for at least three months.

**GA91.1****Abscess of prostate**

A condition caused by infection with the gram-negative bacteria *Neisseria gonorrhoeae*, *Staphylococcus*, or *Escherichia coli*, or the gram-positive bacteria *Staphylococcus aureus* or *Mycobacterium tuberculosis*. This condition is characterised by a focal accumulation of purulent material and neutrophils within or on the prostatic tissue, dysuria, fever, and suprapubic pain. Confirmation is by a transrectal ultrasound to identify size and location of abscess, and a urine sample to identify leukocytes.

|               | A condition of the epididymis, caused by determinants arising during the antenatal period. This condition is characterised by twisting of the epididymis around its axis and ischaemia, scrotal pain, or inflammation. This condition may also present with a thickened scrotal wall, a reactive hydrocele, and enlargement of the head of the epididymis. Confirmation is by imaging. |
| <b>GB01.2</b> | <b>Torsion of hydatids</b>                                                                                                                                                                                                                                                                                                                                                             |
|               | A condition of the testicular appendix, caused by determinants arising during the antenatal period. This condition is characterised by twisting of the hydatid of Morgagni and pedunculated hydatid around its axis and ischaemia, testicular pain, scrotal oedema, and a palpable blue dot discolouration on the scrotum. Confirmation is by imaging.                                 |
| <b>GB01.Z</b> | <b>Torsion of testis, epididymis or appendices, unspecified</b>                                                                                                                                                                                                                                                                                                                        |

**GB05****Redundant prepuce, phimosis or paraphimosis**

Several conditions of the foreskin, caused by abnormalities in the prepuce. This condition is characterised by redundant or tight foreskin and lack of retractability of the foreskin or the inability of the foreskin to be reduced.

**GB05.0****Redundant prepuce**

A condition of the foreskin, caused by determinants arising during the antenatal period. This condition is characterised by the presence of excess foreskin tissue.

**GB05.1****Frenulum breve**

A condition of the frenulum preputii penis, caused by determinants arising during the antenatal period. This condition is characterised by a short frenulum and restricted movement of the prepuce, leading to hindered penetration during sexual intercourse or pain and tearing.

**GB05.2****Phimosis**

A condition of the foreskin, caused by the improper development of the foreskin during the antenatal period, balanitis, lichen sclerosus, inflammation, infection, repeated catheterization, or forcible foreskin retraction. This condition is characterised by constriction of the preputial orifice and restricted movement of the prepuce over the glans. This condition may also present with difficulty urinating or dysfunctions during sexual intercourse.

**GB05.3****Paraphimosis**

A condition of the foreskin, caused by a narrow or inflamed foreskin, improper handling of foreskin, or retraction of the foreskin for an extended duration. This condition is characterised by an inability for the foreskin to return to its normal position after being retracted over the glans, pain, and inflammation, and may lead to gangrene.

**GB05.4****Adherent prepuce**

A condition in which the prepuce is adherent to the prepuce which makes it hard to retract the prepuce.

**GB05.Z****Redundant prepuce, phimosis or paraphimosis, unspecified****GB06****Certain specified disorders of penis**

**Exclusions:** Redundant prepuce, phimosis or paraphimosis (GB05)

**Coded Elsewhere:** Male erectile dysfunction (HA01.1)

**GB06.0****Balanoposthitis**

Inflammation of the foreskin and/or glans penis. It may be associated with specific disorders such as lichen planus, lichen sclerosus, reactive arthritis or contact dermatitis etc. but is most commonly "non-specific".

**GB06.01**

Irritant balanoposthitis

**GB06.02**

Balanoposthitis due to infection

**Coded Elsewhere:** Candida balanoposthitis (1F23.11)

| <b>GB06.1</b>  | <p><b>Priapism</b></p> <p>A condition of the penis, caused by acute leukaemia, sickle cell anaemia, infection, a penile or central nervous system lesion, or the use of certain pharmacological agents. This condition is characterised by prolonged or persistent painful penile erection lasting over four hours without physical or psychological sexual arousal.</p> <p><b>Inclusions:</b> Painful erection</p>                                                                                                                                                                                   |
| <b>GB06.2</b>  | <p><b>Penile fibromatosis</b></p> <p>A condition characterised by induration of the corpora cavernosa of the penis producing a painful fibrous chordee within the soft tissue of the penis and inflammation of the tunica albuginea. This condition may be associated with trauma or injury to the penis. This condition may also present with pain during erection, erectile dysfunction, shortening, or abnormal curvature of the penis when erect. Confirmation is by ultrasonography.</p> <p><b>Inclusions:</b> Peyronie disease<br/>Plastic induration of penis<br/>Induratio penis plastica</p> |
| <b>GB06.3</b>  | <p><b>Mondor disease of the penis</b></p> <p>A well-recognised usually benign and self-limiting entity occurring in sexually active men and presenting with a cord-like thickening of penile veins or lymphatics located around the coronal sulcus or, less commonly, along the dorsal vein of the penis. Infrequently it may be associated with non-sexual trauma or with hypercoagulable states.</p>                                                                                                                                                                                                |
| <b>GB06.4</b>  | <p><b>Chronic penile oedema</b></p> <p>Chronic oedema localised to the penis. Proposed causes include chronic strangulation, low grade streptococcal infection with resultant irreversible lymphatic damage or primary hypoplastic lymphatics.</p>                                                                                                                                                                                                                                                                                                                                                    |
| <b>GB06.5</b>  | <p><b>Sclerosing lymphangitis of penis</b></p> <p>This condition presents with a usually painless serpiginous cord-like swelling in the coronal sulcus of the penis. It is typically associated with vigorous sexual intercourse. It normally resolves within a period of weeks.</p>                                                                                                                                                                                                                                                                                                                  |
| <b>GB06.Y</b>  | <b>Other specified disorders of penis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>GB06.Z</b>  | <b>Disorders of penis, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**GB07****Inflammatory disorders of male genital organs, not elsewhere classified**

Any disorder of the male genital organs, characterised by pathological changes and inflammation of the tissue, not classified elsewhere.

**Exclusions:** Inflammation of penis (GB06)  
Orchitis or epididymitis (GB02)  
Epididymorchitis (GB02)

**GB07.0****Inflammatory disorders of seminal vesicle**

Any disorder of the seminal vesicle, characterised by pathological changes and inflammation of the tissue.

**Coded Elsewhere:** Tuberculosis of seminal vesicle (1B12.5)

**GB07.1****Inflammatory disorders of spermatic cord, tunica vaginalis or vas deferens**

Any disorder of the spermatic cord, tunica vaginalis and vas deferens, characterised by pathological changes and inflammation of the tissue.

**Coded Elsewhere:** Chylocele of tunica vaginalis in loiasis (1F66.0)  
Chylocele of tunica vaginalis in filariasis due to *Wuchereria bancrofti* (1F66.30)

**GB07.2****Inflammatory disorders of scrotum**

Any disorder of the scrotum, caused by poor hygiene or chafing of the skin. This condition is characterised by superficial inflammation of the tissue.

**Exclusions:** Streptococcal cellulitis of skin (1B70.1)  
Staphylococcal cellulitis of skin (1B70.2)

**GB07.Y****Other specified inflammatory disorders of male genital organs, not elsewhere classified****GB08****Vascular disorders of male genital organs**

Any disorder affecting the cardiovascular and genital systems, characterised by pathological changes to the blood vessels of the male genital organs.

**GB0Y****Other specified diseases of the male genital system****GB0Z****Diseases of the male genital system, unspecified**

## Disorders of breast (GB20-GB2Z)

Any disorder characterised by pathological changes to the breast or breast tissue.

**Exclusions:** Certain specified disorders of breast or lactation associated with childbirth (JB46)

**Coded Elsewhere:** Neoplasms of the breast

### **GB20**

#### **Benign breast disease**

Any disease affecting females, characterised by benign, noncancerous lesions in the breast, leading to pathological changes to (and discomfort of) the breast or breast tissue.

**Coded Elsewhere:** Breast abscess (GB21.0)

Disorders of breast augmentation (GC7A)

Disorders of breast reduction (GC79)

#### **GB20.0**

##### **Fibrocystic change of breast**

A condition characterised by changes to the breast tissue leading to benign, noncancerous lesions in the breast. These conditions may be associated with small or large cyst formation, hyperplasia of the ductal epithelium, apocrine metaplasia of the ductal cells, papillomatosis, duct ectasia, sclerosing adenosis, or fibrosis of the stroma. This condition may also present with breast pain, thickening of breast tissue, or nipple discharge that worsen prior to menstruation, or may be asymptomatic. Confirmation is by clinical breast exam, followed by mammography or ultrasonography to distinguish between abnormal tissue.

#### **GB20.1**

##### **Fibroadenosis of breast**

**Exclusions:** Fibroadenoma of breast (2F30.5)

#### **GB20.Y**

##### **Other specified benign breast disease**

#### **GB20.Z**

##### **Benign breast disease, unspecified**

### **GB21**

#### **Inflammatory disorders of breast**

Any disorder of the breast or breast tissue, characterised by inflammatory effects, pain, heat, redness, swelling, and loss of function.

**Coded Elsewhere:** Nonpurulent mastitis associated with childbirth (JB45.1)

Neonatal infectious mastitis (KA65.3)

#### **GB21.0**

##### **Breast abscess**

A condition of the breast, caused by inflammation due to infection with a bacterial or parasitic host, or contact with other foreign materials. This condition is characterised by a focal accumulation of purulent material within or on the breast tissue.

**Coded Elsewhere:** Abscess of breast associated with childbirth (JB45.0)

#### **GB21.Y**

##### **Other specified inflammatory disorders of breast**

#### **GB21.Z**

##### **Inflammatory disorders of breast, unspecified**

**GB22****Hypertrophy of breast**

A condition affecting the breast, characterised by unilateral or bilateral enlargement or thickening of the connective tissues that exceeds 3% of the total body weight. This condition may be associated with increased histologic sensitivity to, or abnormally high levels of, prolactin, estrogen, and progesterone in the blood.

**GB23****Certain specified disorders of breast**

Any disorder of the breast or breast tissue, characterised by pathological changes, not classified elsewhere.

**Coded Elsewhere:** Other signs or symptoms in breast (MF3Y)

**GB23.0****Mammary duct ectasia**

A condition of the breast, caused by lipid and cellular debris or secretory (such as colostrum) stasis, or a nonspecific duct widening process. This condition is characterised by obstruction and subsequent dilation of the lactiferous duct, periductal inflammation, periductal fibrosis, nipple retraction, inversion, pain, or bloody discharge from the nipple.

**GB23.1****Fissure or fistula of nipple**

A condition characterised by the formation of a deep furrow or crack-like lesion on the nipple and an abnormal passage between the nipple and adjacent tissues or surfaces.

**GB23.2****Fat necrosis of breast**

A condition of the breast, caused by saponification of fat tissue, commonly subsequent to trauma or radiation therapy. This condition is characterised by damage, death, or inflammation of the fat tissue by blood and tissue digestive enzymes, and the development of scar tissue and lesions. Confirmation is by imaging of the breast and needle aspiration.

**GB23.3****Atrophy of breast**

A condition of the breast, caused by apoptosis of the cells commonly due to prolonged estrogen reduction, diminished cellular proliferation, decreased cellular volume, decreased function, ischaemia, malnutrition, disease, or mutation. This condition is characterised by a partial or complete decrease in size and function of the breast tissue.

**GB23.4****Galactorrhoea not associated with childbirth**

A condition of the breast, characterised by persistent and abnormal secretion of white discharge. In females, the secretions occur between intervals of neonate or infant nursing, or after the infant has stopped breastfeeding. In males and children, these secretions occur spontaneously. This condition is not associated with the physiological changes as part of pregnancy, childbirth, or the puerperium.

**GB23.5****Mastodynia**

The symptom of breast pain. This symptom may be classified as cyclic or non-cyclical depending on the clinical patterns.

**Exclusions:** Chronic pain (MG30)

**GB2Z****Disorders of breast, unspecified**

## Diseases of the urinary system (GB40-GC2Z)

Any disease characterised by pathological changes to the urinary system.

**Coded Elsewhere:** Neoplasms of the urinary system

Clinical findings on examination of urine, without diagnosis (MF90-MF9Y)

Structural developmental anomalies of the urinary system (LB30-LB3Z)

Symptoms, signs or clinical findings involving the urinary system (MF50-MF5Y)

Hypertensive renal disease (BA02)

### Glomerular diseases (GB40-GB4Z)

Any disease characterised by pathological changes to the glomerulus.

**Exclusions:** Hypertensive renal disease (BA02)

**Coded Elsewhere:** Clinical findings in specimens from the urinary system (MF80-MF8Z)

Symptomatic late syphilis of other sites (1A62.2)

Plasmodium malariae malaria with nephropathy (1F42.0)

Glomerular disorders in secondary systemic amyloidosis (5D00.1)

#### GB40

### Nephritic syndrome

Sudden onset of glomerular disease usually with severe (macroscopic/visible) haematuria accompanied by oliguria, elevated blood pressure, mild oedema and albuminuria or proteinuria usually of sub-nephrotic range. May be a cause of acute renal failure in which case the syndrome is termed rapidly progressive nephritis. Nephritic syndrome has many possible causes and is associated with renal light microscopic changes such hypercellularity, necrosis or thrombosis.

**Inclusions:** acute nephritis

**Exclusions:** Tubulo-interstitial nephritis, not specified as acute or chronic (GB54)

#### GB41

### Nephrotic syndrome

A condition characterised by severe proteinuria, greater than 3.5 g/day in an average adult. The substantial loss of protein in the urine results in hypoalbuminaemia and generalised oedema. There is also usually hyperlipidaemia. Other manifestations of glomerular disease may be present. There are many possible causes and renal histological appearances. Possible complications include vascular thrombosis, infections, malnutrition and renal failure.

**GB42****Persistent proteinuria or albuminuria**

Persistent albuminuria >3mg/mmol creatinine or >30mg/day is regarded as abnormal, indicative and often the first manifestation of chronic kidney disease (CKD). In surveillance for CKD in “at risk” patients such as diabetics, urinalysis for albuminuria is recommended by most clinical practice guidelines. This diagnosis does not refer to intermittent proteinuria as in orthostatic or exercise induced proteinuria, nor to non-albuminuric proteinuria such as Bence Jones (immunoglobulin light chain) proteinuria.

**Exclusions:**

- Orthostatic proteinuria (MF96.0)
- proteinuria NOS (MF96)
- Gestational proteinuria without hypertension (JA22.0)
- Bence Jones proteinuria (MF96.1)
- Nephrotic syndrome (GB41)
- albuminuria NOS (MF96)

**GB42.0****Albuminuria, Grade A2**

Presence of excessive albumin in the urine, indicating abnormal permeability glomerular filtration. Can be quantitated by either timed collections or spot urine samples with the concentration adjusted to the urine creatinine concentration to correct for variations in overall urine concentration. When persistent and of moderate or greater severity usually indicates overt glomerular disease such as caused by diabetic glomerulosclerosis, glomerulonephritis or amyloid.

**Coding Note:** Code also the causing condition

**GB42.1****Albuminuria, Grade A3**

Presence of excessive albumin in the urine, indicating abnormal permeability glomerular filtration. Can be quantitated by either timed collections or spot urine samples with the concentration adjusted to the urine creatinine concentration to correct for variations in overall urine concentration. When persistent and of moderate or greater severity usually indicates overt glomerular disease such as caused by diabetic glomerulosclerosis, glomerulonephritis or amyloid.

**Coding Note:** Code also the causing condition

**GB42.Y****Other specified persistent proteinuria or albuminuria****GB42.Z****Persistent proteinuria or albuminuria, unspecified****GB4Y****Other specified glomerular diseases****GB4Z****Glomerular diseases, unspecified**

## Renal tubulo-interstitial diseases (GB50-GB5Z)

Any disease characterised by pathological changes to the renal tubules and interstitial tissues.

**Exclusions:** pyeloureteritis cystica (GB90)

**Coded Elsewhere:** Renal tubulo-interstitial disorders due to toxoplasma gondii (1F57.Y)

Renal tubulo-interstitial disorders due to salmonella infection (1A09.Y)

### **GB50**

#### **Acute tubulo-interstitial nephritis**

A disease characterised by acute inflammation of, and damage to, tubules and the interstitium of the kidney, usually accompanied by acute renal failure (acute kidney injury). Histology shows acute inflammatory infiltrate in the interstitium with oedema and tubular cell necrosis, and often prominent eosinophils and plasma cells. Usually due to an allergic or immunological reaction to an identifiable allergen. Usually accompanied by acute renal failure which may be reversible if the allergen is withdrawn expeditiously with or without corticosteroid administration. Can lead to chronic tubulointerstitial nephritis, particularly if the allergen exposure is not short term. May be associated with other signs of an allergic reaction such as rash or fever.

### **GB51**

#### **Acute pyelonephritis**

Acute inflammation of the renal pelvis and parenchyma due to bacterial infection. One of the commonest bacterial infections of adult women. Symptoms include fever, loin (kidney) pain, nausea and vomiting. Co-incident symptoms of acute cystitis with dysuria, frequency and haematuria may occur. Renal failure is not a feature unless there is septicaemia, hypotension or hypovolemia.

### **GB52**

#### **Acute tubular necrosis**

Any condition of the kidney, caused by hypotension, hypoperfusion, ischaemia, hypoxia, or use of nephrotoxic drugs. These conditions are characterised by death of tubular epithelial cells and acute kidney injury. Confirmation is by identification of "muddy brown casts" of epithelial cells in a urine sample.

**Coding Note:** Code also the causing condition

### **GB53**

#### **Acute renal papillary necrosis**

A condition of the kidney, caused by ischaemia, liver disease, or analgesic nephropathy. This condition is characterised by death of single or multiple renal papillae, haematuria, flank pain, and tissue fragments in the urine. This condition may also present with fever and chills.

### **GB54**

#### **Tubulo-interstitial nephritis, not specified as acute or chronic**

A disease characterised by inflammation of and damage to tubules or the interstitium of the kidney while sparing the glomeruli secondary to immune reaction or toxic agent.

**Exclusions:** calculous pyelonephritis (GB70)

**GB55****Chronic tubulo-interstitial nephritis**

A disease characterised by inflammation of and damage to tubules and/or the interstitium of the kidney, interstitial scarring, fibrosis and tubule atrophy resulting in progressive chronic renal insufficiency

**Coding Note:** Code also the causing condition

**Exclusions:** calculous pyelonephritis (NFAD) (GB70)

**Coded Elsewhere:** Autosomal dominant polycystic kidney disease (GB81)

**GB55.0****Balkan nephropathy**

Balkan nephropathy is a form of interstitial nephritis characterised by a very localised geographic occurrence. It was first identified in the 1920s among several small, discrete communities along the Danube River and its major tributaries. Now thought to be due to chronic aristolochic acid ingestion (ingestion of Aristolochia clematitis seeds native to the Balkan region), though it has some differences from Chinese herbal nephropathy. This disease is characterised by renal insufficiency, proteinuria, tubulointerstitial nephritis, anaemia, weakness, copper discoloration of the skin, and may lead to end-stage renal disease within 5 years after onset.

**Inclusions:** Balkan endemic nephropathy

**GB55.1****Nephropathy induced by heavy metals**

A disease of the kidney, caused by exposure to heavy, nephrotoxic metals such as cadmium, lead, copper, and mercury. This disease is characterised by tubular damage, renal insufficiency, interstitial fibrosis, necrosis, or renal dysfunction. This disease may also present with hypertension, proteinuria, hyperuricaemia, aminoaciduria, or other symptoms characteristic of chronic kidney disease.

**GB55.2****Chronic urate nephropathy**

A condition characterised by deposition of urate crystals in the tubules and interstitium, partial or complete obstruction of the collecting ducts, renal pelvis, or ureter, hyperuricaemia disproportionate to the degree of renal insufficiency and decreased urate excretion. This condition may lead to inflammation, fibrosis, and renal failure.

**GB55.Y****Other specified chronic tubulo-interstitial nephritis**

**Coding Note:** Code also the causing condition

**GB55.Z****Chronic tubulo-interstitial nephritis, unspecified**

**Coding Note:** Code also the causing condition

**GB56****Obstructive or reflux nephropathy**

Distention of the pelvis and calices of the kidney with urine as a result of obstruction of the ureter or as a result of a vesicoureteral or vesicoureterorenal reflux of urine. Diffuse or focal cortical scarring and chronic tubulointerstitial nephritis may be present.

**Exclusions:** Calculus of kidney and ureter without hydronephrosis (GB70-GB7Z)

Obstructive pyelonephritis (GB55)

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GB56.0</b> | <b>Hydronephrosis with ureteropelvic junction obstruction</b><br>A condition caused by any obstruction in or stenosis of the ureteropelvic junction. This condition is characterised by distension of the pelvis and calyces of the kidney with a partial or complete obstructed flow of urine. This condition may present with flank pain, haematuria, pyuria, or hyperpyrexia.<br><i><b>Exclusions:</b></i> Congenital ureteropelvic junction occlusion (QJCB) (LB31.8)<br>Congenital hydronephrosis (LB31.0) |
| <b>GB56.1</b> | <b>Hydronephrosis with ureteral obstruction</b><br>Intrinsic stenosis or stricture or extrinsic obstruction of the ureter, except at the ureteropelvic junction or at the ureteral orifice, causing distension of the pelvis and calices of the kidney with urine.<br><i><b>Exclusions:</b></i> Congenital hydronephrosis (LB31.0)                                                                                                                                                                              |
| <b>GB56.2</b> | <b>Hydronephrosis with ureteral orifice obstruction</b><br>Dilatation of the renal pelvis and calyces associated with (and presumably due to) obstruction of the ureter at the insertion into the bladder and hence ascending back pressure.<br><i><b>Exclusions:</b></i> with infection (GB58)                                                                                                                                                                                                                 |
| <b>GB56.3</b> | <b>Hydronephrosis due to bladder obstruction</b><br>A condition caused by an obstruction in the urinary bladder. It is characterised by distention of the pelvis and calices of one or both kidneys, and lack of free flow of urine from the kidney, and can lead to progressive atrophy of the kidney if untreated. The condition may also present with pain in the flank, haematuria, pyuria, or hyperpyrexia.                                                                                                |
| <b>GB56.4</b> | <b>Other or unspecified hydronephrosis</b><br>This refers to distension and dilation of the renal pelvis and calyces in situations other than those coded elsewhere or when no additional details are available.<br><i><b>Exclusions:</b></i> Pyonephrosis (GB58)                                                                                                                                                                                                                                               |
| <b>GB56.5</b> | <b>Hydronephrosis and reflux nephropathy with vesicoureteral or vesico-uretero-renal reflux</b><br>Distention of the pelvis and calices of the kidney with urine as a result of obstruction of the ureter not caused by strictures or stenoses of the ureter or by ureteral stones.<br><i><b>Exclusions:</b></i> Congenital vesico-uretero-renal reflux (LB31.D)<br>Congenital hydronephrosis (LB31.0)                                                                                                          |

| <b>GB56.Z</b> | <b>Obstructive or reflux nephropathy, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>GB57</b>   | <b>Nephrocalcinosis</b><br>A condition of the kidney, caused by previous inflammation or degeneration when accompanied by previous renal failure. This condition is characterised by renal lithiasis, or calcium-based deposition in the renal parenchyma. This condition may also present with infection, haematuria, anal colic, or decreased renal function. Confirmation is by abdominal medical imaging to determine location of deposits.                                                                 |

**GB58****Pyonephrosis**

A condition caused by complications subsequent to calyces, hydronephrosis, or pyelonephritis, or which may be idiopathic. This condition is characterised by a collection of pus in the renal pelvis, leading to distension of the kidney and possibly kidney failure.

**GB59****Renal or perinephric abscess**

A collection of purulent material in the kidney substance and/or around the kidneys. Usually due to bacterial infection. Minor: Origin can be haematogenous or ascending infection.

**GB5Y****Other specified renal tubulo-interstitial diseases**

**Coding Note:** Code also the causing condition

**GB5Z****Renal tubulo-interstitial diseases, unspecified**

**Coding Note:** Code also the causing condition

Kidney failure (GB60-GB6Z)

Inability of the kidneys to adequately filter the blood of waste products, with a lower than normal glomerular filtration rate (GFR). Can be abrupt and potentially reversible (acute kidney injury) or persistent due to irreversible kidney damage (chronic kidney disease).

**Exclusions:** Hypertensive renal disease (BA02)

**Coded Elsewhere:** Renal failure following abortion, ectopic or molar pregnancy (JA05.4)

Congenital renal failure (KC01)

**GB60****Acute kidney failure**

An increase in serum creatinine by 0.3 mg/dl or greater within 48 hours; or increase in serum creatinine by 1.5-fold or greater above baseline, which is known or presumed to have occurred within 7 days; or urine volume less than 0.5 ml/kg/h for 6 hours or more.

**Coding Note:** Code also the causing condition

**Inclusions:** nontraumatic acute kidney injury

**GB60.0****Acute kidney failure, stage 1**

Rate of change of serum creatinine: Increase 1.5-1.9 times baseline within 7 days OR increase by 0.3 mg/dl increase within 48 h OR Magnitude of urine output: <0.5 ml/kg/h for 6-12 hours

**Coding Note:** Code also the causing condition

**Inclusions:** Acute nontraumatic kidney injury, mild

**GB60.1****Acute kidney failure, stage 2**

Rate of change of serum creatinine: 2.0-2.9 times baseline OR Magnitude of urine output: <0.5 ml/kg/h for >= 12 hours

**Coding Note:** Code also the causing condition

**Inclusions:** Acute nontraumatic kidney injury, moderate

#### Urolithiasis (GB70-GB7Z)

A condition of the urinary system, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by the presence of calculi originating in the urinary system or which are located within the urinary system. Confirmation is by abdominal radiography, or intravenous pyelography.

- Exclusions:**        Hyperoxaluria (5C51.2)  
Hypercalciuria (MF98.0)  
Crystalluria (MF90-MF9Y)  
Cystinuria (5C60.2)

- GB70**        **Calculus of upper urinary tract**  
A condition of the urinary system, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the upper urinary tract (renal papilla). This condition may present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.

- GB70.0**      **Calculus of kidney**  
A condition of the kidney, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by the urinary calculi located in the kidney, in renal calyces, or in the renal pelvis. This condition may present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.
- Inclusions:**        Renal calculus or stone  
Stone in kidney

**GB71.1****Calculus in urethra**

A condition caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the urethra, where it may lead to renal colic. This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, groin, thighs, or genitalia. Confirmation is by abdominal radiography to determine the presence and location of calculi.

**Exclusions:** Calculus of bowel segments for urinary diversion (GB71.2)

**GB71.2****Calculus of bowel segments for urinary diversion**

A condition caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the bowel segment for urinary diversion (ileal neobladder, ileal conduit, ileocaecal pouch). This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.

**GB71.Z****Calculus of lower urinary tract, unspecified****GB7Z****Urolithiasis, unspecified**

Cystic or dysplastic kidney disease (GB80-GB8Z)

Any disease of the kidney, caused by determinants arising during the antenatal period or after birth. These diseases are characterised by pathological changes to one or both kidneys, and may manifest in other anatomical tissues.

**Coded Elsewhere:** Tuberous sclerosis (LD2D.2)

Noonan syndrome (LD2F.15)

Meckel-Gruber syndrome (LD2F.13)

Asphyxiating thoracic dystrophy (LD24.B1)

Multicystic renal dysplasia (LB30.9)

**GB80****Nonfamilial nongenetic cystic kidney disease**

Diseases where there are developmental anatomical or pathological changes in the renal substance not occurring in a familial distribution and not known to have a mono-genetic cause.

**Coded Elsewhere:** Medullary sponge kidney (LB30.8)

Multicystic renal dysplasia (LB30.9)

**GB80.0****Simple renal cyst**

A disease of the kidney, caused by obstruction of tubules, anaemia, or detachment of diverticula. This disease is characterised by the formation of thin-walled abnormal sacs filled with hypo-echogenic radiolucent fluid in the kidney. Confirmation is by imaging.

**Inclusions:** Bosniak 1 cyst

| <b>GB80.1</b> | <b>Complex renal cyst</b><br>Renal cyst with high attenuation or mixed contents, septate or thickened wall. May be subclassified by the Bosniak classification Bosniak 2-4 to indicate increasing likelihood of neoplasm.                                                                                                                                                                                                                                                                                                             |
| <b>GB80.2</b> | <b>Subscapular or perirenal urinoma</b><br>A disease of the kidney, caused by urinary obstruction such as calices in the kidney or ureter, or a breach of the integrity of the pelvis. This disease is characterised by an encapsulated collection of urine located in a fat-lined sac around the kidneys or in the retroperitoneum. Confirmation is by imaging.                                                                                                                                                                      |
| <b>GB80.Y</b> | <b>Other specified nonfamilial nongenetic cystic kidney disease</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>GB80.Z</b> | <b>Nonfamilial nongenetic cystic kidney disease, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>GB81</b>   | <b>Autosomal dominant polycystic kidney disease</b><br>Multiple cysts in both kidneys increasing in number and size from adolescence, associated with development of hypertension and chronic renal failure. Autosomal dominant familial pattern is usual and due to mutations on chromosomes 16 and 4. Non-renal manifestations can include cysts in the liver and less commonly pancreas. Cerebral arterial aneurysms with subarachnoid haemorrhage, and other non-renal vascular abnormalities can also occur.                     |
| <b>GB82</b>   | <b>Autosomal dominant tubulointerstitial disease</b><br>Nonglomerular, autosomal dominant kidney diseases characterised by progressive tubulointerstitial fibrosis and progression to end-stage renal disease. Currently there are 4 known genetic defects - in uromodulin, mucin-1, renin and hepatocyte nuclear factor 1-beta. The last is associated with Maturity-Onset Diabetes of the Young (MODY) and thus is classified as MODY-5<br><br><b>Coded Elsewhere:</b> Medullary sponge kidney (LB30.8)<br>MODY 5 syndrome (5A13.6) |
| <b>GB83</b>   | <b>Nephronophthisis</b><br>Autosomal recessive disease characterised by polyuria, polydipsia, enuresis and chronic kidney disease with end stage renal failure occurring between birth and late adolescence depending on the NPHP gene involved. Extra-renal manifestations occur with associated multisystem genetic disorders (e.g. Senior-Loken, Cogan, Joubert)                                                                                                                                                                   |
| <b>GB8Y</b>   | <b>Other specified cystic or dysplastic kidney disease</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>GB8Z</b>   | <b>Cystic or dysplastic kidney disease, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**GB90****Certain specified disorders of kidney or ureter**

Any disorder characterised by pathological changes to the kidney or ureter.

**Coding Note:** Code also the causing condition

**Exclusions:** Urolithiasis (GB70-GB7Z)

**Coded Elsewhere:** Macroscopic changes of size of the kidney (MF54)  
Ureteral fistula (GC04.2)  
Postinterventional ischemia or infarction of kidney (GC7B)  
Neonatal haemorrhage originating in kidney or bladder (KA83.6)  
Diabetic nephropathy (GB61.Z)  
Renal late syphilis (1A62.2Y)  
Disorders of kidney or ureter in tuberculosis (1B1Y)

**GB90.0****Nephroptosis**

Enhanced mobility of the kidney, resulting in ptosis when the patient is upright. More common on the right, associated with a longer renal artery, and debatably associated with fibromuscular hyperplasia and hypertension.

**GB90.1****Hydroureter**

A condition caused by obstruction, stricture, or stenosis of the ureter, which may be due to prostatic hypertrophy, carcinoma, retroperitoneal or pelvic neoplasms, calculi, or a congenital anomaly. This condition is characterised by distention of the ureter with urine.

**Exclusions:** Congenital primary megaureter (LB31.1)

**GB90.2****Ureteral kinking or deviation without obstruction**

A condition characterised by a sharp twist, curve, or other deviation in the length of the ureter, but without an obstructed flow of urine.

**Inclusions:** Kinking of the ureter without hydronephrosis

**Exclusions:** with infection (GB58)  
congenital ureteric stenosis (LB31.8)

**GB90.3****Ischaemia or infarction of kidney**

**Exclusions:** Atherosclerosis of renal artery (BD40.2)  
Goldblatt kidney (BD40.2)  
Congenital renal artery stenosis (LA90.40)

**GB90.4****Renal tubular function disorders**

Disorders primarily due to abnormalities of renal tubular resorption or secretion.

**Coded Elsewhere:** Cystinuria (5C60.2)  
Nephrogenic syndrome of inappropriate antidiuresis (5A60.20)

- GB90.40** Hypotonia-cystinuria type 1  
This is a rare syndrome including neonatal and infantile hypotonia and failure to thrive, cystinuria type 1, nephrolithiasis, growth retardation due to growth hormone deficiency, and minor facial dysmorphism due to a homozygous deletion of two contiguous genes on chromosome 2: SLC3A1 and PREP (2p21).  
**Coded Elsewhere:** Hypotonia-cystinuria syndrome (5C60.Y)
- GB90.41** Pseudohypoaldosteronism type 1  
Pseudohypoaldosteronism type 1 (PHA1) are rare forms of mineralocorticoid resistance. PHA1 presents in the newborn with renal salt wasting, failure to thrive and dehydration. Two clinical forms have been described: i) a renal form (renal PHA1) that improves with age and in which mineralocorticoid resistance is restricted to the kidney, and ii) a generalised severe form (generalised PHA1) that persists into adulthood and in which mineralocorticoid resistance is systemic and salt loss occurs in multiple organs. Inheritance can be autosomal recessive (arPHA1) which is more severe and persistent than the autosomal dominant form (AdPHA1)
- GB90.42** Fanconi syndrome  
Disorder associated with generalised dysfunction of the proximal tubule expressed as amino-aciduria, low molecular weight proteinuria, polyuria with sodium and potassium wasting, hyper-phosphaturia (hence bone disease), renal tubular acidosis, glycosuria and hypercalciuria.  
**Coded Elsewhere:** Oculocerebrorenal syndrome (5C60.0)
- GB90.43** Bartter syndrome  
Bartter syndrome is a genetic renal tubular disease characterised by the association of hypokalaemic alkalosis, increased levels of plasma renin and aldosterone, low blood pressure and vascular resistance to angiotensin II. Two forms of the disease can be distinguished according to clinical criteria: an antenatal or infantile Bartter syndrome (most patients with genotypes I, II and IV), characterised by polyhydramnios, premature delivery, polyuria, dehydration, hypercalciuria and nephrocalcinosis; and classical Bartter syndrome (mostly patients with genotype III, but also some type IV patients), manifesting as polyuria-polydipsia in infancy-childhood through to adulthood, dehydration and a variable delay in the height-weight growth curve.
- GB90.44** Renal tubular acidosis  
Conditions characterised by failure of the kidney to excrete acids, or to lose bicarbonate into the urine, which causes the blood to become too acidic. Characteristically hyperchloremic acidosis (low anion gap metabolic acidosis). Has several forms and many causes.  
**Coded Elsewhere:** Osteopetrosis with renal tubular acidosis (LD24.10)
- GB90.45** Renal glycosuria  
Glycosuria (glucose in the urine) at normal blood glucose levels due to inadequate renal tubular resorption. Can be due to above normal glomerular filtration as in pregnancy or occurs residual nephrons in renal failure, or reduced tubular resorption.

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Certain specified diseases of urinary system (GC00-GC0Y)

**Exclusions:** Infections of genitourinary tract in pregnancy (JA62)  
Urolithiasis (GB70-GB7Z)

**Coded Elsewhere:** Urinary incontinence (MF50.2)  
Tuberculosis of kidney or ureter (1B12.5)  
Tuberculosis of bladder (1B12.5)

## **GC00**

### **Cystitis**

A condition of the bladder, caused by infection, reaction to pharmacological agents, exposure to radiation therapy, or potential irritants. This condition is characterised by inflammation of the urinary bladder, dysuria, pollakiuria, fever, or flank pain.

**Exclusions:** Prostatocystitis (GA91.2)

**Coded Elsewhere:** Infections of bladder in pregnancy (JA62.1)

### **GC00.0**

#### **Trigonitis**

A condition of the bladder that is frequently idiopathic. This condition is characterised by inflammation of the nonkeratinizing squamous metaplasia in the trigone region of the bladder.

### **GC00.1**

#### **Infectious cystitis**

Inflammation of the urinary bladder caused by microbes

**Exclusions:** tuberculous cystitis (NHEA) (1B12.5)  
bladder disorder in schistosomiasis [bilharziasis] (NHEB) (1F86.0)

### **GC00.2**

#### **Contracted urinary bladder**

A condition characterised by inflammation of the urinary bladder that may lead to progressive shrinkage, fibrosis, contraction, and irreversible end-stage disease with high urination frequency.

### **GC00.3**

#### **Interstitial cystitis**

A condition characterised by inflammation of the urinary bladder and ureters. This condition may be associated with a malformation of, or injury to, the bladder epithelium, infection with toxins, an autoimmune reaction, or an allergy. This condition may also present with Hunner ulcers diffuse glomerulations affecting all quadrants of the bladder mucosa, mild to severe chronic bladder pressure, bladder pain, urgency to urinate, and low volumes of urine.

### **GC00.Y**

#### **Other specified cystitis**

### **GC00.Z**

#### **Cystitis, unspecified**

**GC01****Other disorders of bladder**

Any disorder characterised by pathological changes to the urinary bladder.

**Exclusions:** Cystocele (GC40.0)  
hernia or prolapse of bladder, female (GC40.0)  
Calculus in bladder (GB71.0)

**Coded Elsewhere:** Bladder pain (MF52)  
Neonatal haemorrhage originating in kidney or bladder (KA83.6)

**GC01.0****Bladder neck obstruction**

A condition of the bladder, caused by congenital or acquired abnormalities that impair the muscles that connect the bladder to the urethra. This condition is characterised by obstruction of the bladder neck and constricted opening during urination. This condition may also present with pelvic pain, pollakiuria, incontinence, or incomplete bladder emptying. Confirmation is by video urodynamics to observe the obstruction as the bladder fills and voids.

**GC01.1****Vesical fistula, not elsewhere classified**

A condition caused by medical intervention, trauma, inflammation, infection, cancer, or congenital factors. This condition is characterised by the formation of an abnormal passage between the urinary bladder and the skin, bowel, vagina, uterus, or rectum, and suprapubic pain, frequency, dysuria, or tenesmus.

**Coded Elsewhere:** Vesicovaginal fistula (GC04.10)

**GC01.2****Diverticulum of bladder**

A condition of the bladder, caused by congenital or acquired obstruction to the bladder outlet, a bladder dysfunction following a nerve injury, or a prior bladder surgery. This condition is characterised by balloon-like protrusions on the bladder lining, leading to an area of weakness in the bladder wall. This condition may be asymptomatic, or present with recurrent bladder infections, difficulty urinating, or abdominal fullness. Confirmation is by contrast radiography or cystoscopy.

**Exclusions:** Congenital diverticulum of urinary bladder (LB31.4)  
Urachal diverticulum (LB03.0)  
Hutch-diverticulum (LB31.4)

**GC01.3****Rupture of bladder, nontraumatic**

A condition of the bladder, caused by determinants not attributable to wound or injury. This condition is characterised by rupture of the bladder.

**GC01.4****Neuromuscular dysfunction of bladder, not elsewhere classified**

**Exclusions:** Functional urinary incontinence (MF50.23)  
neurogenic bladder due to cauda equina syndrome (8B40)  
due to spinal cord lesion (ND51)  
Urinary incontinence associated with pelvic organ prolapse (GC40.5)

**GC01.Y****Other specified disorders of bladder**

| <b>GC05</b>   | <b>Prolapsed urethral mucosa</b><br>A condition characterised by a circular protrusion of the distal urethra mucosa through the external urethral meatus. This condition may be associated with congenital or acquired abnormalities such as weakened pelvic floor structures, trauma, or separation of the longitudinal and circular-oblique smooth muscle layers. This condition is commonly asymptomatic in adolescents, or presents with vaginal bleeding and difficulty urinating in postmenopausal individuals.<br><i>Inclusions:</i> prolapse of urethra<br><i>Exclusions:</i> Female urethrocele (GC40.0) |
| <b>GC06</b>   | <b>Urethral diverticulum</b><br>A disease of the urethra, caused by an obstruction to the periurethral glands due to subsequent to frequent infection, or congenitally. This disease is characterised by a localised protrusion of the urethra into the anterior vaginal wall, consisting mostly of fibrous tissue. This disease may also present with urinary frequency, urgency, and dysuria. Confirmation is by imaging to determine the extent and location of the diverticulum.                                                                                                                              |
| <b>GC07</b>   | <b>Urethral caruncle</b><br>A condition characterised by small, focal, benign, pink or red polypoid masses of the distal urethral mucosa, which may become painful, bloody, and deep red in colour. This condition may be associated with urogenital atrophy due to estrogen deficiency, and may be aggravated by chronic irritation of urethral mucosa exposure. This condition typically affects postmenopausal women.                                                                                                                                                                                          |

## Other conditions of the genitourinary system (GC40-GC51.Z)

Any disorder characterised by pathological changes to the genitourinary system.

### Female pelvic floor dysfunction (GC40-GC4Z)

Any condition affecting females, caused by an altered or lack of function of the female pelvic floor. These conditions are characterised by weakened or tightened pelvic floor muscles, or an impairment of the sacroiliac joint, lower back, coccyx, or hip joint.

**Coded Elsewhere:** Rectal prolapse (DB31.2)

- GC40.30** Incomplete uterovaginal prolapse  
A condition caused by weakness, damage, or stretching of the ligaments between the uterus and the vaginal wall, typically subsequent to childbirth. This condition is characterised by stage 1 descensus of the uterus into the vagina, leading to a bulge and distal prolapse greater than 1 centimetre above the hymen or stage 2 descensus with distal prolapse of 1 centimetre or less proximal or distal to the hymen. This condition may also present with urinary incontinence, sensation of heaviness in the pelvis, or difficulty urinating.
- Exclusions:**
- Incomplete uterine prolapse with anterior vaginal wall prolapse (GC40.31)
  - Incomplete uterine prolapse with posterior vaginal wall prolapse (GC40.32)
  - Incomplete uterine prolapse with anterior and posterior vaginal wall prolapse (GC40.33)
- GC40.31** Incomplete uterine prolapse with anterior vaginal wall prolapse  
A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of the bladder into the vagina due to tearing of the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia).
- GC40.32** Incomplete uterine prolapse with posterior vaginal wall prolapse  
A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of the rectum into the vagina, due to a tear in the rectovaginal septum (which is normally a tough, fibrous, sheet-like divider between the rectum and vagina).
- GC40.33** Incomplete uterine prolapse with anterior and posterior vaginal wall prolapse  
A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of both the bladder and the rectum into the vagina, due to tears in the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia) and in the rectovaginal septum, a tough, fibrous, sheet-like divider between the rectum and vagina.
- GC40.34** Complete uterovaginal prolapse  
A condition caused by weakness, damage, or stretching of the ligaments between the uterus and the vaginal wall, typically subsequent to childbirth. This condition is characterised by stage 3 descensus of the uterus into the vagina, leading to a bulge and distal prolapse greater than 1 centimetre below the hymen or stage 4 descensus with complete eversion of the total length of the genital tract. This condition may also present with urinary incontinence, sensation of heaviness in the pelvis, or difficulty urinating.
- GC40.35** Complete uterine prolapse with anterior vaginal wall prolapse  
A condition characterised by the displacement of the uterus from its normal position to at least one cm below the hymen, possibly up to complete eversion of the female genital tract, in association with herniation of the bladder into the vagina due to tearing of the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia).

- GC51.3 Female Genital Mutilation Type 4**  
All other harmful procedures to the female genitalia for non-medical purposes, for example: pricking, piercing, incising, scraping and cauterization.
- GC51.Z Female Genital Mutilation, unspecified**

## Postprocedural disorders of genitourinary system (GC70-GC7B)

Any disorder caused by or subsequent to any intervention of the genitourinary system.

**Exclusions:** Irradiation cystitis (GC00)  
States associated with artificial menopause (GA30.3)

**Coded Elsewhere:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

**GC70 Postoperative adhesions of vagina**  
A condition caused by or subsequent to any vaginal surgery or intervention. This condition is characterised by fibrous bands of scar tissue between the intravaginal tissues (intravaginal adhesions). This condition may also present with pelvic pain and dyspareunia.

**GC71 Prolapse of vaginal vault after hysterectomy**  
A condition of the vagina, caused by or subsequent to hysterectomy. This condition is characterised by descensus of the vaginal vault that may also lead to weakening of the vaginal walls.

**GC72 Postprocedural urethral stricture**  
Urethral stricture caused by catheterization, transurethral manipulations (e.g. transurethral resections), urethral instillations, or irradiation exposure

**GC73 Postprocedural pelvic peritoneal adhesions**  
A condition caused by or subsequent to any pelvic intervention leading to damage and inflammation of the peritoneum. This condition is characterised by fibrous bands of scar tissue and abnormal connection between pelvic organs or tissues. This condition may also present with pelvic pain or bowel obstruction.

**Exclusions:** Endometriosis (GA10)

**GC74 Malfunction or complication of external stoma of urinary tract**  
A condition caused by a surgically created opening connecting the urinary tract to the external environment. This condition is characterised by dysfunction or decreased function of the incision.

**Exclusions:** Postsurgical leak (NE81.3)

**GC75 Malfunction of the afferent segment of a continent urinary pouch**  
A condition characterised by the dysfunction or lack of function of a surgically created urine reservoir within the body, specifically along the path by which urine enters the pouch.

**GC76**

**Malfunction of the efferent segment of a continent urinary pouch**

A condition characterised by the dysfunction or lack of function of a surgically created urine reservoir within the body, specifically along the path by which urine exits the pouch.

**GC77**

**Postprocedural nonmenstrual uterine bleeding**

Uterine bleeding occurring after procedure (i.e. uterine surgery, induced abortion, ...)

**GC78**

**Postprocedural acute female pelvic inflammatory disease**

**GC79**

**Disorders of breast reduction**

**GC7A**

**Disorders of breast augmentation**

A group of disorders that may arise in concert with or subsequent to the surgical placement of breast implants.

**GC7B**

**Postinterventional ischemia or infarction of kidney**

This refers to a restriction in blood supply to tissues of the kidney due to a health care intervention causing a shortage of oxygen and glucose needed for cellular metabolism resulting in the death of kidney tissue cells.

**GC8Y**

**Other specified diseases of the genitourinary system**

**GC8Z**

**Diseases of the genitourinary system, unspecified**

# CHAPTER 17

---

## Conditions related to sexual health

This chapter has 15 four-character categories.

Code range starts with HA00

**Coded Elsewhere:** Changes in female genital anatomy

Changes in male genital anatomy

Paraphilic disorders (6D30-6D3Z)

Adrenogenital disorders (5A71)

Predominantly sexually transmitted infections (1A60-1A9Z)

Contact with health services for contraceptive management (QA21)

This chapter contains the following top level blocks:

- Sexual dysfunctions
- Sexual pain disorders
- Gender incongruence
- Changes in female genital anatomy
- Changes in male genital anatomy

### Sexual dysfunctions (HA00-HA0Z)

Sexual Dysfunctions are syndromes that comprise the various ways in which adult people may have difficulty experiencing personally satisfying, non-coercive sexual activities. Sexual response is a complex interaction of psychological, interpersonal, social, cultural and physiological processes and one or more of these factors may affect any stage of the sexual response. In order to be considered a sexual dysfunction, the dysfunction must: 1) occur frequently, although it may be absent on some occasions; 2) have been present for at least several months; and 3) be associated with clinically significant distress.

**Coded Elsewhere:** Sexual dysfunction associated with pelvic organ prolapse (GC42)

#### **HA00**

#### **Hypoactive sexual desire dysfunction**

Hypoactive Sexual Desire Dysfunction is characterised by absence or marked reduction in desire or motivation to engage in sexual activity as manifested by any of the following: 1) reduced or absent spontaneous desire (sexual thoughts or fantasies); 2) reduced or absent responsive desire to erotic cues and stimulation; or 3) inability to sustain desire or interest in sexual activity once initiated. The pattern of diminished or absent spontaneous or responsive desire or inability to sustain desire or interest in sexual activity has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>HA00.Z</b>  | <b>Hypoactive sexual desire dysfunction, unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>HA01</b>    | <b>Sexual arousal dysfunctions</b><br>Sexual arousal dysfunctions include difficulties with the physiological or the subjective aspects of sexual arousal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>HA01.0</b>  | <b>Female sexual arousal dysfunction</b><br>Female sexual arousal dysfunction is characterised by absence or marked reduction in response to sexual stimulation in women, as manifested by any of the following: 1) Absence or marked reduction in genital response, including vulvovaginal lubrication, engorgement of the genitalia, and sensitivity of the genitalia; 2) Absence or marked reduction in non-genital responses such as hardening of the nipples, flushing of the skin, increased heart rate, increased blood pressure, and increased respiration rate; 3) Absence or marked reduction in feelings of sexual arousal (sexual excitement and sexual pleasure) from any type of sexual stimulation. The absence or marked reduction in response to sexual stimulation occurs despite the desire for sexual activity and adequate sexual stimulation, has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress. |
| <b>HA01.00</b> | Female sexual arousal dysfunction, lifelong, generalised<br>The person has always experienced female sexual arousal dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**HA01.1Z** Male erectile dysfunction, unspecified

**Coding Note:** Code also the causing condition

**HA01.Y** **Other specified sexual arousal dysfunctions**

**HA01.Z** **Sexual arousal dysfunctions, unspecified**

**HA02** **Orgasmic dysfunctions**

Orgasmic dysfunctions refer to difficulties related to the subjective experience of orgasm.

**HA02.0** **Anorgasmia**

Anorgasmia is characterised by the absence or marked infrequency of the orgasm experience or markedly diminished intensity of orgasmic sensations. In women, this includes a marked delay in orgasm, which in men would be diagnosed as Male Delayed Ejaculation. The pattern of absence, delay, or diminished frequency or intensity of orgasm occurs despite adequate sexual stimulation, including the desire for sexual activity and orgasm, has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

**Inclusions:** Psychogenic anorgasm

**HA02.00** Anorgasmia, lifelong, generalised

The person has always experienced anorgasmia from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA02.01** Anorgasmia, lifelong, situational

The person has always experienced anorgasmia from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA02.02** Anorgasmia, acquired, generalised

The onset of anorgasmia has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA02.03** Anorgasmia, acquired, situational

The onset of anorgasmia has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA02.0Z** Anorgasmia, unspecified

**HA02.Y** **Other specified orgasmic dysfunctions**

**HA02.Z** **Orgasmic dysfunctions, unspecified**

**HA03****Ejaculatory dysfunctions**

Ejaculatory dysfunctions refer to difficulties with ejaculation in men, including ejaculatory latencies that are experienced as too short (Male early ejaculation) or too long (Male delayed ejaculation).

**Coded Elsewhere:** Retrograde ejaculation (MF40.3)

**HA03.0****Male early ejaculation**

Male early ejaculation is characterised by ejaculation that occurs prior to or within a very short duration of the initiation of vaginal penetration or other relevant sexual stimulation, with no or little perceived control over ejaculation. The pattern of early ejaculation has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

**HA03.00**

Male early ejaculation, lifelong, generalised

The person has always experienced early ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA03.01**

Male early ejaculation, lifelong, situational

The person has always experienced early ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA03.02**

Male early ejaculation, acquired, generalised

The onset of early ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA03.03**

Male early ejaculation, acquired, situational

The onset of early ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA03.0Z**

Male early ejaculation, unspecified

**HA03.1****Male delayed ejaculation**

Male delayed ejaculation is characterised by an inability to achieve ejaculation or an excessive or increased latency of ejaculation, despite adequate sexual stimulation and the desire to ejaculate. The pattern of delayed ejaculation has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

**HA03.10**

Male delayed ejaculation, lifelong, generalised

The person has always experienced delayed ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

## Sexual pain disorders (HA20-HA2Z)

Sexual pain disorders refer to marked and persistent or recurrent difficulties related to the experience of pain during sexual activity in adult people, which are not entirely attributable to an underlying medical condition, insufficient lubrication in women, age-related changes, or changes associated with menopause in women and are associated with clinically significant distress.

**Inclusions:** Psychogenic dyspareunia

**Coded Elsewhere:** Dyspareunia (GA12)

### HA20

#### **Sexual pain-penetration disorder**

Sexual pain-penetration disorder is characterised by at least one of the following: 1) marked and persistent or recurrent difficulties with penetration, including due to involuntary tightening or tautness of the pelvic floor muscles during attempted penetration; 2) marked and persistent or recurrent vulvovaginal or pelvic pain during penetration; 3) marked and persistent or recurrent fear or anxiety about vulvovaginal or pelvic pain in anticipation of, during, or as a result of penetration. The symptoms are recurrent during sexual interactions involving or potentially involving penetration, despite adequate sexual desire and stimulation, are not entirely attributable to a medical condition that adversely affects the pelvic area and results in genital and/or penetrative pain or to a mental disorder, are not entirely attributable to insufficient vaginal lubrication or post-menopausal/age-related changes, and are associated with clinically significant distress.

**Exclusions:** Dyspareunia (GA12)

Pain related to vulva, vagina or pelvic floor (GA34.0)

#### **HA20.0**

##### **Sexual pain-penetration disorder, lifelong, generalised**

The person has always experienced genito-pelvic pain or penetration disorder from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

#### **HA20.1**

##### **Sexual pain-penetration disorder, lifelong, situational**

The person has always experienced genito-pelvic pain or penetration disorder from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

#### **HA20.2**

##### **Sexual pain-penetration disorder, acquired, generalised**

The onset of genito-pelvic pain or penetration disorder has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.

#### **HA20.3**

##### **Sexual pain-penetration disorder, acquired, situational**

The onset of genito-pelvic pain or penetration disorder has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

#### **HA20.Z**

##### **Sexual pain-penetration disorder, unspecified**

### HA2Y

#### **Other specified sexual pain disorders**

**HA2Z****Sexual pain disorders, unspecified****HA40****Aetiological considerations in sexual dysfunctions and sexual pain disorders****HA40.0****Aetiological considerations associated with a medical condition, injury, or the effects of surgery or radiation treatment**

This category should be assigned when there is evidence that an underlying or co-occurring health condition, including hormonal, neurological, and vascular conditions, injuries, and consequences of surgical or radiation treatment is an important contributing factor to a Sexual Dysfunction or a Sexual Pain Disorder. In such cases, the diagnosis corresponding to the underlying or co-occurring health condition should also be assigned. However, underlying or contributory mental disorders should be noted using the qualifier 'Associated with psychological and behavioural factors, including mental disorders', rather than using with this category.

**HA40.1****Aetiological considerations associated with psychological or behavioural factors, including mental disorders**

This category should be assigned when psychological and behavioural factors or symptoms are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Examples include low self-esteem, negative attitudes toward sexual activity, adverse past sexual experiences, and behavioural patterns such as poor sleep hygiene and overwork. Depressive, anxiety, or cognitive symptoms as well as other symptoms of Mental, Behavioural, or Neurodevelopmental Disorders may also interfere with sexual functioning. If the symptoms reach the level of constituting a diagnosable Mental and Behavioural Disorder and the Sexual Dysfunction or Sexual Pain Disorder is an independent focus of clinical attention, this category should be used and the appropriate Mental and Behavioural Disorder diagnosis should also be assigned. However, underlying or contributory Disorders Due to Substance Use should be noted using the category 'Associated with use of psychoactive substance or medication', rather than using this category.

**HA40.2****Aetiological considerations associated with use of psychoactive substance or medication**

This category should be assigned when there is evidence that the direct physiological effects of a psychoactive substance or medication are an important contributing factor to the Sexual Dysfunction or Sexual Pain Disorder. Examples include selective serotonin reuptake inhibitors, histamine-2 receptor antagonists (e.g., cimetidine), alcohol, opioids, and amphetamines. If the diagnostic requirements for a Disorder Due to Substance Use are met, the appropriate Disorder Due to Substance Use diagnosis should also be assigned.

**HA40.3****Aetiological considerations associated with lack of knowledge or experience**

This category should be assigned when, in the clinician's judgment, the individual's lack of knowledge or experience of her or his own body, sexual functioning, and sexual response is an important contributing factor to the Sexual Dysfunction or Sexual Pain Disorder. This includes inaccurate information or myths about sexual functioning.

- HA40.4      Aetiological considerations associated with relationship factors**  
 This category should be assigned when, in the clinician's judgment, relationship factors are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Examples include relationship conflict or lack of romantic attachment. This category may also be used when the Sexual Dysfunction or Sexual Pain Disorder is associated with a Sexual Dysfunction or Sexual Pain Disorder in the sexual partner.
- HA40.5      Aetiological considerations associated with cultural factors**  
 This category should be assigned when, in the clinician's judgment, cultural factors are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Cultural factors may influence expectations or provoke inhibitions about the experience of sexual pleasure or other aspects of sexual activity. Other examples include strong culturally shared beliefs about sexual expression, for example a belief that loss of semen can lead to weakness, disease or death.
- HA40.Y      Other specified aetiological considerations in sexual dysfunctions and sexual pain disorders**

## Gender incongruence (HA60-HA6Z)

Gender incongruence is characterised by a marked and persistent incongruence between an individual's experienced gender and the assigned sex. Gender variant behaviour and preferences alone are not a basis for assigning the diagnoses in this group.

**Exclusions:**      Paraphilic disorders (6D30-6D3Z)

### **HA60      Gender incongruence of adolescence or adulthood**

Gender Incongruence of Adolescence and Adulthood is characterised by a marked and persistent incongruence between an individual's experienced gender and the assigned sex, which often leads to a desire to 'transition', in order to live and be accepted as a person of the experienced gender, through hormonal treatment, surgery or other health care services to make the individual's body align, as much as desired and to the extent possible, with the experienced gender. The diagnosis cannot be assigned prior the onset of puberty. Gender variant behaviour and preferences alone are not a basis for assigning the diagnosis.

**Exclusions:**      Paraphilic disorders (6D30-6D3Z)

### **HA61      Gender incongruence of childhood**

Gender incongruence of childhood is characterised by a marked incongruence between an individual's experienced/expressed gender and the assigned sex in pre-pubertal children. It includes a strong desire to be a different gender than the assigned sex; a strong dislike on the child's part of his or her sexual anatomy or anticipated secondary sex characteristics and/or a strong desire for the primary and/or anticipated secondary sex characteristics that match the experienced gender; and make-believe or fantasy play, toys, games, or activities and playmates that are typical of the experienced gender rather than the assigned sex. The incongruence must have persisted for about 2 years. Gender variant behaviour and preferences alone are not a basis for assigning the diagnosis.

**Exclusions:**      Paraphilic disorders (6D30-6D3Z)

## CHAPTER 18

---

### Pregnancy, childbirth or the puerperium

This chapter has 83 four-character categories.

Code range starts with JA00

A group of conditions characterised as occurring during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:** The codes included in this chapter are to be used for conditions related to or aggravated by the pregnancy, childbirth or by the puerperium (maternal causes or obstetric causes)

**Exclusions:** Postpartum necrosis of pituitary gland (5A61.0)  
Obstetrical tetanus (1C14)  
Injury, poisoning or certain other consequences of external causes (Chapter 22)

**Coded Elsewhere:** Gestational trophoblastic diseases  
Contact with health services for reasons associated with reproduction (QA20-QA4Z)

This chapter contains the following top level blocks:

- Abortive outcome of pregnancy
- Oedema, proteinuria, or hypertensive disorders in pregnancy, childbirth, or the puerperium
- Obstetric haemorrhage
- Certain specified maternal disorders predominantly related to pregnancy
- Maternal care related to the fetus, amniotic cavity or possible delivery problems
- Complications of labour or delivery
- Delivery
- Complications predominantly related to the puerperium
- Certain obstetric conditions, not elsewhere classified
- Gestational trophoblastic diseases

#### Abortive outcome of pregnancy (JA00-JA0Z)

A group of conditions characterised by pregnancy which does not result in live offspring. These conditions include e.g. abortion, ectopic pregnancy or molar pregnancy.

**Exclusions:** Continuing pregnancy after abortion of one fetus or more (JA81.1)

**JA00      Abortion**

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>JA00.0</b>  | <b>Spontaneous abortion</b><br><p>Spontaneous abortion (also referred to as miscarriage) is a spontaneous loss of pregnancy (i.e. embryo or fetus) before 22 completed weeks of gestation. When information on gestational age is unavailable, use birthweight less than 500 grams as the criteria.</p> <p>Spontaneous abortions (miscarriages) are distinct from cases of induced abortion.</p>                                                                               |
| <b>JA00.00</b> | <p>Spontaneous abortion, incomplete, complicated by genital tract or pelvic infection</p> <p>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by genital tract or pelvic infection. This condition is characterised by the incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.</p>                                    |
| <b>JA00.01</b> | <p>Spontaneous abortion, incomplete, complicated by delayed or excessive haemorrhage</p> <p>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by delayed or excessive bleeding. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.</p>                                             |
| <b>JA00.02</b> | <p>Spontaneous abortion, incomplete, complicated by embolism</p> <p>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by embolism. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.</p>                                                                                          |
| <b>JA00.03</b> | <p>Spontaneous abortion, incomplete, with other or unspecified complications</p>                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>JA00.04</b> | <p>Spontaneous abortion, incomplete, without complication</p> <p>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence without any associated complications. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.</p>                                                                                    |
| <b>JA00.05</b> | <p>Spontaneous abortion, complete or unspecified, complicated by genital tract or pelvic infection</p>                                                                                                                                                                                                                                                                                                                                                                         |
| <b>JA00.06</b> | <p>Spontaneous abortion, complete or unspecified, complicated by delayed or excessive haemorrhage</p> <p>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence, and complicated by delayed or excessive bleeding. This condition is characterised by non-induced embryonic or fetal death or passage of products of conception prior to 22 weeks' gestation or weighing less than 500 grams.</p> |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>JA00.07</b> | Spontaneous abortion, complete or unspecified, complicated by embolism<br>A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence, and complicated by embolism. This condition is characterised by non-induced embryonic or fetal death or passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.                                                                                     |
| <b>JA00.08</b> | Spontaneous abortion, complete or unspecified, with other or unspecified complications                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>JA00.09</b> | Spontaneous abortion, complete or unspecified, without complication                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>JA00.1</b>  | <b>Induced abortion</b><br>Induced abortion (also referred to as Artificial termination of pregnancy) is a complete expulsion or extraction from a woman of an embryo or a fetus (irrespective of the duration of the pregnancy), following a deliberate interruption of an ongoing pregnancy by medical or surgical means, which is not intended to result in a live birth. Induced abortions are distinct from cases of spontaneous abortion and stillbirth.<br><b>Inclusions:</b> therapeutic abortion |
| <b>JA00.10</b> | Induced abortion, incomplete, complicated by genital tract or pelvic infection                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>JA00.11</b> | Induced abortion, incomplete, complicated by delayed or excessive haemorrhage                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>JA00.12</b> | Induced abortion, incomplete, complicated by embolism                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**JA21****Pre-eclampsia superimposed on chronic hypertension**

A condition affecting pregnant females over 20 weeks gestation. This condition is characterised by systolic blood pressure greater than 140mmHg and diastolic greater or equal to 90mmHg on two occasions 4 hours apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction in a female diagnosed with pre-existing hypertension.

**Inclusions:** Superimposed pre-eclampsia

**JA22****Gestational oedema or proteinuria without hypertension**

A condition affecting pregnant females, characterised by excessive systemic fluid build-up and serum proteins in the urine, without an abnormally elevated blood pressure induced by pregnancy.

**Inclusions:** Pregnancy-induced oedema and proteinuria without hypertension

**JA22.0****Gestational proteinuria without hypertension****JA22.1****Gestational oedema without hypertension****JA22.2****Gestational oedema with proteinuria without hypertension**

The accumulation of fluid and proteinuria due to the physiological alterations of pregnancy in the absence of hypertension

**JA23****Gestational hypertension**

A condition affecting pregnant females, characterised by systolic blood pressure greater than 140mmHg and/or a diastolic blood pressure greater or equal to 90mmHg on two occasions, 4 hours or more apart. Can be newly diagnosed after 20 weeks gestation or before 1 week postpartum. Confirmation is by measurement of blood pressure, liver and kidney functions test, and urine test.

**JA24****Pre-eclampsia**

This condition is characterised by systolic blood pressure greater than 140 mmHg and/or diastolic greater or equal to 90 mmHg on two occasions 4 hours or more apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction.

**Exclusions:** Pre-eclampsia superimposed on chronic hypertension (JA21)

**JA24.0****Mild to moderate pre-eclampsia**

This condition is characterised by systolic blood pressure greater than 140 mmHg and/or diastolic greater or equal to on two occasions 4 hours or more apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction.

## Certain specified maternal disorders predominantly related to pregnancy (JA60-JA6Z)

A group of conditions of the mother which occur during the period of time from conception to delivery (pregnancy).

- Exclusions:**
- Maternal infectious diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium (JB63)
  - Maternal care related to the fetus, amniotic cavity or possible delivery problems (JA80-JA8Z)
  - Certain maternal diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium (JB64)

**Coded Elsewhere:** Pregnancy symptom or complaint (MF34)

### **JA60 Excessive vomiting in pregnancy**

#### **JA60.0 Mild hyperemesis gravidarum**

Vomiting occurring during pregnancy responsive to dietary modification and antiemetic treatment

**Inclusions:** Hyperemesis gravidarum, mild or unspecified, starting before the end of the 22nd week of gestation

**Exclusions:** Hyperemesis gravidarum with metabolic disturbance (JA60.1)

#### **JA60.1 Hyperemesis gravidarum with metabolic disturbance**

Vomiting in pregnancy, not responsive to dietary modification and antiemetic treatment and associated with electrolyte disturbances and acid-base imbalance

#### **JA60.2 Late vomiting of pregnancy**

Vomiting occurring after 22 completed weeks of gestation.

**Inclusions:** Excessive vomiting starting after 22 completed weeks of gestation

#### **JA60.Y Other specified excessive vomiting in pregnancy**

#### **JA60.Z Excessive vomiting in pregnancy, unspecified**

### **JA61 Venous complications in pregnancy**

**Exclusions:** Complications following abortion, ectopic or molar pregnancy (JA05)

obstetric pulmonary embolism (JB42.2)

Venous complications in the puerperium (JB41)

#### **JA61.0 Varicose veins of lower extremity in pregnancy**

#### **JA61.1 Genital varices in pregnancy**

#### **JA61.2 Superficial thrombophlebitis in pregnancy**

**Inclusions:** Thrombophlebitis of legs in pregnancy

#### **JA61.3 Deep phlebothrombosis in pregnancy**

| <b>JA61.4</b> | <b>Haemorrhoids in pregnancy</b>                                            | A condition affecting females during pregnancy, caused by an increase in intra-abdominal pressure and hormonal changes during pregnancy. This condition is characterised by enlarged and varicose haemorrhoidal veins in the anus and lower rectum. This condition may also present with itching, burning, painful swellings at the anus, dyschezia or rectal bleeding with bowel movements. Confirmation is by digital or visual examination with an anoscope, proctoscope, or sigmoidoscope of the anal canal and rectum to determine the presence of haemorrhoids.                |
| <b>JA61.5</b> | <b>Cerebral venous thrombosis in pregnancy</b>                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|               | <i>Inclusions:</i>                                                          | Cerebrovenous sinus thrombosis in pregnancy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>JA65.11</b> | <p>Pruritus of pregnancy</p> <p>Pruritus in pregnancy can usually be attributed to a specific cause such as cholestasis, a pregnancy-specific dermatosis such as pruritic urticarial papules and plaques of pregnancy, or to exacerbation of a preexisting inflammatory dermatosis such as atopic eczema. Not uncommonly, however, a specific cause cannot be identified.</p> <p><b>Coded Elsewhere:</b> Intrahepatic cholestasis of pregnancy (JA65.0)</p>                                                                                                                                                                                                                                                                                               |
| <b>JA65.12</b> | <p>Polymorphic eruption of pregnancy</p> <p>Polymorphic eruption of pregnancy is a dermatosis which occurs almost exclusively in primigravidae or women with multiple pregnancy. It is associated with above average weight gain in pregnancy and it is thought that distension of abdominal skin is important in the pathogenesis: the precise mechanism is not understood. The eruption characteristically first appears in the third trimester of pregnancy as intensely itchy erythematous urticarial papules and plaques in and around the abdominal striae distensae. In some women it may then become more generalised. Onset is sometimes delayed until the immediate postpartum period. It does not usually recur in subsequent pregnancies.</p> |

**JA8Y****Maternal care related to other specified fetus, amniotic cavity or possible delivery problems****JA8Z****Maternal care related to unspecified fetus, amniotic cavity or possible delivery problems**

## Complications of labour or delivery (JB00-JB0Z)

Any complication characterised by the adverse evolution of a condition that arises during any one of the three stages of labour and delivery.

**JB00****Preterm labour or delivery**

A condition characterised by the onset of labour and delivery before 37 completed weeks.

Assign an additional extension code, if desired, for Duration of pregnancy.

**JB00.0****Preterm labour without delivery**

A condition characterised by the onset of labour before 37 completed weeks, without delivery.

**JB00.1****Preterm spontaneous labour with preterm delivery**

A condition characterised by the spontaneous onset of labour and delivery before 37 completed weeks.

**JB00.2****Preterm labour with term delivery**

A condition characterised by the spontaneous onset of labour before 37 completed weeks followed by a delivery after 39 weeks.

**JB00.3****Preterm delivery following iatrogenic induction of labour or caesarean section****JB00.Y****Other specified preterm labour or delivery****JB00.Z****Preterm labour or delivery, unspecified****JB01****Failed induction of labour**

A condition characterised by a failed attempt to stimulate contractions before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.0****Failed medical induction of labour**

A condition characterised by a failed attempt to stimulate contractions pharmacologically before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.1****Failed instrumental induction of labour**

A condition characterised by a failed attempt to instrumentally stimulate contractions before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.Z****Failed induction of labour, unspecified**

**JB02****Abnormalities of forces of labour**

Any condition affecting pregnant females, characterised by an anomaly or dysfunction to the tissues or processes associated with the natural progression of labour. These conditions may lead to further complications during labour and childbirth.

**JB02.0****Primary uterine inertia**

A condition affecting pregnant females characterised by insufficiently strong or inappropriately coordinated rhythmic activity of the myometrium during labour to efface and dilate the cervix.

**Inclusions:** Primary hypotonic uterine dysfunction  
Uterine inertia during latent phase of labour  
Primary inadequate contractions

**JB02.1****Secondary uterine inertia**

A condition affecting pregnant females that is idiopathic. This condition is characterised by vigorous contractions that decrease in vigour due to exhaustion or dehydration of the individual. This condition leads to lack of labour progress.

**Inclusions:** Secondary hypotonic uterine dysfunction  
Arrested active phase of labour

**JB02.2****Other uterine inertia**

A condition affecting pregnant females that is idiopathic. This condition is characterised by the absence of effective uterine contractions during labour and abnormal relaxation of the uterus during labour. This condition leads to lack of labour progress or uterine haemorrhage.

**Inclusions:** Atony of uterus, during labour  
**Exclusions:** atony of uterus, postpartum (JA43.1)

**JB02.3****Precipitate labour**

A condition affecting pregnant females that is idiopathic. This condition is characterised by rapid labour and the lack of time for standard obstetric preparations or procedures leading to the delivery of the newborn. This condition leads to vaginal bleeding, frequent strong contractions, feelings of defecation, crowning of the fetus head at the vaginal introitus, or bulging of the amniotic sac.

**JB02.4****Hypertonic, incoordinate, or prolonged uterine contractions**

A condition affecting pregnant females that is idiopathic. This condition is characterised by uterine dysfunction leading to hypertonic, uncoordinated, and prolonged rhythmic activity of the myometrium during labour.

**Exclusions:** dystocia (fetal)(maternal) NOS (JB06)

**JB02.Y****Other specified abnormalities of forces of labour****JB02.Z****Abnormalities of forces of labour, unspecified**

| <b>JB05</b>   | <b>Obstructed labour due to maternal pelvic abnormality</b>                          | Obstructed labour means that, in spite of strong contractions of the uterus, the fetus cannot descend through the pelvis because there is an insurmountable barrier preventing its descent. Obstruction usually occurs at the pelvic brim, but occasionally it may occur in the cavity or at the outlet of the pelvis. Complications resulting from obstructed labour can be avoided if a woman in obstructed labour is identified early and appropriate action is taken. |

**JB0Z****Complications of labour or delivery, unspecified****Delivery (JB20-JB2Z)**

Birth of one or more neonates from the uterus either spontaneously, assisted, or by caesarean section.

**Exclusions:** Disorders of newborn related to length of gestation or fetal growth (KA20-KA2Z)

**JB20****Single spontaneous delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate from the uterus.

**Inclusions:** delivery in a completely normal case

**JB20.0****Spontaneous vertex delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate in vertex position from the uterus.

**JB20.1****Spontaneous breech delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate in breech position from the uterus.

**JB20.Y****Single spontaneous delivery with other specified presentation****JB20.Z****Single spontaneous delivery, unspecified****JB21****Single delivery by forceps or vacuum extractor**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate from the uterus using forceps and vacuum extractor to assist the delivery.

**Exclusions:** Failed application of vacuum extractor or forceps, unspecified (JB0D.7)

**JB22****Single delivery by caesarean section**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a single neonate from the uterus by caesarean section.

**JB22.0****Delivery by elective caesarean section****JB22.1****Delivery by emergency caesarean section****JB22.2****Single delivery by caesarean hysterectomy**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate from the uterus by caesarean section followed by removal of the uterus.

**JB22.Z****Single delivery by caesarean section, unspecified**

| <b>JB2Z</b>   | <b>Delivery, unspecified</b>                                                                                                                                                                                           |

## Complications predominantly related to the puerperium (JB40-JB4Z)

A group of conditions characterised as any adverse evolution (complication) which may arise during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Exclusions:** Obstetrical tetanus (1C14)

**Coded Elsewhere:** Postpartum symptom or complaint (MF35)

### **JB40** Infections in the puerperium

**Exclusions:** infection during labour (JB0D)

#### **JB40.0** Puerperal sepsis

**Coding Note:** Any type of infection - bacterial, viral, fungal or protozoal, can cause sepsis and must be coded as well. When the site of infection is unknown, select a code for Infection of unspecified site by organism followed by the appropriate code for sepsis.

**Exclusions:** Obstetric pyaemic or septic embolism (JB42.3)  
sepsis during labour (JB0D)

#### **JB40.1** Infection of obstetric surgical wound

#### **JB40.2** Other infection of genital tract following delivery

#### **JB40.3** Urinary tract infection following delivery

#### **JB40.4** Pyrexia of unknown origin following delivery

**Exclusions:** puerperal fever (JB40.0)  
Pyrexia during labour, not elsewhere classified (JB0D.2)

#### **JB40.Y** Other specified infections in the puerperium

#### **JB40.Z** Infections in the puerperium, unspecified

### **JB41** Venous complications in the puerperium

**Exclusions:** Venous complications in pregnancy (JA61)  
Obstetric embolism (JB42)

#### **JB41.0** Superficial thrombophlebitis in the puerperium

- JB41.1**            **Deep phlebothrombosis in the puerperium**
- JB41.2**            **Haemorrhoids in the puerperium**
- JB41.3**            **Cerebral venous thrombosis in the puerperium**
- JB41.Y**            **Other specified venous complications in the puerperium**
- JB41.Z**            **Venous complications in the puerperium, unspecified**

**JB42**

**Obstetric embolism**

A condition characterised by the lodging of a blood clot, a fat globule or a gas bubble (embolus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Exclusions:**            Embolism following abortion, ectopic or molar pregnancy (JA05.2)

**JB42.0**            **Obstetric air embolism**

A condition characterised by the lodging of a gas bubble (air embolus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**JB42.1**            **Amniotic fluid embolism**

Amniotic fluid embolism is a rare obstetric emergency in which it is postulated that amniotic fluid, fetal cells, hair, or other debris enter the maternal circulation, causing cardiorespiratory collapse.

**Inclusions:**            Anaphylactoid syndrome of pregnancy

**JB42.2**            **Obstetric blood-clot embolism**

A condition characterised by the lodging of a blood clot (a specific type of embolus known as a thrombus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**JB42.3**            **Obstetric pyaemic or septic embolism**

**JB42.Y**            **Other specified obstetric embolism**

**JB42.Z**            **Obstetric embolism, unspecified**

| <b>JB4Z</b>         | <b>Complications predominantly related to the puerperium, unspecified</b>                                                                                                                                                              |

## Certain obstetric conditions, not elsewhere classified (JB60-JB6Z)

Any condition characterised by an obstetric complication, condition, disease, or death during pregnancy, labour and delivery, or the puerperium that is not elsewhere classified.

### **JB60**

#### **Obstetric death of unspecified cause**

A condition characterised by maternal death during pregnancy or within 42 days following delivery. This death may be associated with physiological, obstetrical, or other changes or is provoked by interventions used during pregnancy, childbirth, or puerperium, but has no specified cause.

### **JB61**

#### **Death from any obstetric cause occurring more than 42 days but less than one year after delivery**

A condition characterised by maternal death between 43 days and one year following delivery. This death is caused by any physiological, obstetrical, or other changes or is provoked by interventions used during pregnancy, childbirth, or puerperium.

**Coding Note:** This category is to be used to indicate death from any obstetric cause (conditions in categories JA00-JB0Z; JB40-JB4Z and JB63-JB6Z), and occurring more than 42 days but less than one year after delivery.

**Exclusions:** Sequelae of complication of pregnancy, childbirth or the puerperium (JB65)

Death from sequelae of obstetric causes (JB62)

### **JB61.0**

#### **Death from direct obstetric cause occurring more than 42 days but less than one year after delivery**

Any condition directly resulting in death due to any cause associated with the physiological or other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:** This category is to be used to indicate death from direct obstetric cause and occurring more than 42 days but less than one year after delivery.

### **JB61.1**

#### **Death from indirect obstetric cause occurring more than 42 days but less than one year after delivery**

Any condition indirectly resulting in death via an intermediate cause due to any issue associated with the physiological or other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:** This category is to be used to indicate death from indirect obstetric cause and occurring more than 42 days but less than one year after delivery.

### **JB61.Z**

#### **Death from obstetric cause occurring more than 42 days but less than one year after delivery, unspecified whether direct or indirect**

**Coding Note:** This category is to be used to indicate death from any obstetric cause (conditions in categories JA00-JB0Z; JB40-JB4Z and JB63-JB6Z), and occurring more than 42 days but less than one year after delivery.
