**NC36.Z** Injury of unspecified muscle, fascia, tendon or bursa at forearm level

**NC37** **Crushing injury of forearm**

**Exclusions:** Crushing injury of wrist or hand (NC58)

**NC37.0** Crushing injury of elbow

**NC37.Y** Crushing injury of other specified part of forearm

**NC37.Z** Crushing injury of forearm, unspecified

**NC38** **Traumatic amputation of forearm**

**Exclusions:** Traumatic amputation of wrist or hand (NC59)

**NC38.0** Traumatic amputation at right elbow level

**NC38.1** Traumatic amputation at left elbow level

**NC38.2** Traumatic amputation at elbow level, bilateral

**NC38.3** Traumatic amputation at level between right elbow and wrist

**NC38.4** Traumatic amputation at level between left elbow and wrist

**NC38.5** Traumatic amputation between elbow and wrist, bilateral

**NC38.Z** Traumatic amputation of forearm, unspecified

**NC39** **Multiple injuries of forearm**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC3Y** **Other specified injuries to the elbow or forearm**

**NC3Z** **Injuries to the elbow or forearm, unspecified**

**Injuries to the wrist or hand (NC50-NC5Z)**

**Exclusions:** Burns (ND90-NE2Z)  
Frostbite (NE40-NE4Z)  
Other injuries of arm, level unspecified (ND53)  
Insect bite or sting, venomous (NE61)

**NC50** **Injury to fingernail**

**NC51** **Superficial injury of wrist or hand**

**NC51.0** Superficial injury of finger or thumb

**NC51.00** Abrasion of finger or thumb

**NC51.01** Contusion of finger or thumb

**NC52.2 Multiple open wounds of wrist or hand**

**Coding Note:** Assign additional codes for the specific injuries.

**NC53**

**Fracture at wrist or hand level**

A break in one of the bones of the wrist or hand.

**Exclusions:** fracture of distal parts of ulna and radius (NC32.6)

**NC53.0 Fracture of scaphoid bone of hand**

**NC53.1 Fracture of other carpal bone**

A break in one or more of the carpal bones of the wrist

**NC53.2 Fracture of first metacarpal bone**

A break in the first metacarpal bone, that which is part of the thumb.

**NC53.3 Fracture of other metacarpal bone**

**NC53.30** Fracture of shaft of other metacarpal bone

**NC53.31** Fracture of neck of other metacarpal bone

**NC53.3Y** Fracture of other specified part of other metacarpal bone

**NC53.3Z** Fracture of other metacarpal bone, unspecified

**NC53.4 Multiple fractures of metacarpal bones**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**NC53.5 Fracture of thumb bone**

**Exclusions:** Fracture of first metacarpal bone (NC53.2)

**NC53.6 Fracture of other finger bone**

A break in one or more of the phalanges

**NC53.60** Fracture of index finger

**NC53.61** Fracture of middle finger

**NC53.62** Fracture of ring finger

**NC53.63** Fracture of little finger

**NC53.6Y** Other specified fracture of other finger bone

**NC53.6Z** Fracture of other finger bone, unspecified

**NC53.7 Multiple fractures of fingers**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**NC53.Y Fracture at other specified part of wrist or hand level**

**NC53.Z Fracture at wrist or hand level, unspecified**

**NC5A Multiple injuries of wrist or hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.0 Injury of multiple sites of hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.1 Injury of multiple sites of wrist**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.Y Other specified multiple injuries of wrist or hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.Z Multiple injuries of wrist or hand, unspecified**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5Y Other specified injuries to the wrist or hand**

**NC5Z Injuries to the wrist or hand, unspecified**

**Injuries to the hip or thigh (NC70-NC7Z)**

**Exclusions:**

- Frostbite (NE40-NE4Z)
- Burns (ND90-NE2Z)
- Insect bite or sting, venomous (NE61)
- Other injuries of leg, level unspecified (ND55)

**NC70 Superficial injury of hip or thigh**

**NC70.0 Abrasion of hip**

|                     |                                                           |

| <b>NC73.1</b>       | <b>Strain or sprain of hip</b><br>A collective term for muscle and ligament injuries of the tissues associated with the hip without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature. |

**ND33****Dislocations, strains or sprains involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND34****Crushing injuries involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**ND35****Traumatic amputations involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Inclusions:** avulsion involving multiple body regions

**Exclusions:** traumatic amputation of leg NOS (ND55)  
traumatic amputation of arm NOS (ND53)  
Open wounds involving multiple body regions (ND31)  
Decapitation (NA63)  
traumatic amputation of: trunk NOS (NB33)

**ND36****Other injuries involving multiple body regions, not elsewhere classified**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND37****Unspecified multiple injuries**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**Exclusions:** injury NOS (ND56)

**Injuries to unspecified part of trunk, limb or body region (ND50-ND5Z)**

**Exclusions:** Injuries involving multiple body regions (ND30-ND37)  
Insect bite or sting, venomous (NE61)  
Burns (ND90-NE2Z)  
Frostbite (NE40-NE4Z)

**ND50****Fracture of spine, level unspecified**

**Exclusions:** multiple fractures of spine, level unspecified (ND32)

**Coded Elsewhere:** Fracture, dislocation or subluxation of spine due to birth injury (KA45.4)

**ND56****Injury of unspecified body region**

Damage inflicted on the body in an unspecified area as the direct or indirect result of an external force, with or without disruption of structural continuity.

**Exclusions:** Injuries involving multiple body regions (ND30-ND37)  
multiple injuries NOS (ND37)

**ND56.0****Superficial injury of unspecified body region**

**Exclusions:** multiple superficial injuries NOS (ND30)  
**Coded Elsewhere:** Haematoma of surgical wound of skin (NE81.00)  
Superficial incisional site infection (NE81.20)

**ND56.1****Open wound of unspecified body region**

**Exclusions:** Traumatic amputations involving multiple body regions (ND35)  
Open wounds involving multiple body regions (ND31)  
traumatic amputation NOS (ND56.8)

**ND56.2****Fracture of unspecified body region**

**Exclusions:** multiple fractures NOS (ND32)

**ND56.3****Dislocation or strain or sprain of unspecified body region**

**Exclusions:** multiple dislocations, sprains and strains NOS (ND33)

**ND56.4****Injury of nerve of unspecified body region**

**Exclusions:** multiple injuries of nerves NOS (ND36)

**ND56.5****Injury of blood vessel of unspecified body region**

**Exclusions:** multiple injuries of blood vessels NOS (ND36)

**ND56.6****Injury of muscles or tendons of unspecified body region**

**Exclusions:** multiple injuries of tendons and muscles NOS (ND36)

**ND56.7****Crushing injury of unspecified body region****ND56.8****Traumatic amputation of unspecified body region**

**Exclusions:** multiple: crushing injuries NOS (ND34)  
multiple traumatic amputations NOS (ND35)

**ND56.9****Injury complicating pregnancy****ND56.Y****Other specified injury of unspecified body region****ND56.Z****Unspecified injury to unspecified part of trunk, limb or body region**

**ND57****Secondary effect of trauma**

- Inclusions:** deformity NOS  
scarring resulting from previous injury  
old amputation
- Exclusions:** Post traumatic stress disorder (6B40)  
Post traumatic wound infection, not elsewhere classified (NF0A.3)

**ND5Y****Other specified injuries to unspecified part of trunk, limb or body region****ND5Z****Injuries to unspecified part of trunk, limb or body region, unspecified****Effects of foreign body entering through natural orifice (ND70-ND7Z)**

- Exclusions:** foreign body accidentally left in operation wound (PL11.3)  
Residual foreign body in soft tissue (FB56.1)

**ND70****Foreign body on external eye**

- Exclusions:** Retained foreign body following penetrating wound of orbit (NA06.2)  
Retained foreign body in eyelid (NA06.03)

**ND70.0 Foreign body in cornea****ND70.1 Foreign body in conjunctival sac****ND70.2 Foreign body in multiple parts of external eye**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND70.Y Foreign body in other specified part of external eye****ND70.Z Foreign body on external eye, unspecified****ND71****Foreign body in ear**

Objects that inadvertently enter the ear from the environment.

**ND72****Foreign body in respiratory tract****ND72.0 Foreign body in nasal sinus****ND72.1 Foreign body in nostril****ND72.2 Foreign body in pharynx**

Objects that inadvertently enter the pharynx from the environment.

**ND72.20 Asphyxia on mucous in nasopharynx****ND72.2Y Other specified foreign body in pharynx****ND72.2Z Foreign body in pharynx, unspecified**

## Burns (ND90-NE2Z)

A burn is an injury to the tissues caused by a pathological flux of energy which causes cellular destruction and irreversible denaturation of proteins and is primarily caused by thermal or other acute trauma.

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

**Inclusions:**

- internal chemical burn or corrosion
- external chemical burn or corrosion
- burns from hot objects
- burns from friction
- burns from hot air and hot gases
- burns from lightning

**Exclusions:**

- Sunburn (EJ40)
- Adverse cutaneous effects of therapeutic ionizing irradiation (EL60-EL63)
- Adverse effects of phototherapy (Chapter 14)
- Photosensitivity due to drug (EH75)
- Phototoxic reactions to skin contact with photoactive agents (EK20-EK2Z)
- Neonatal phototherapy burn (KC50)

Burns of external body surface, specified by site (ND90-ND9Z)

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

**ND90** **Burn of head or neck except face**  
Injury to the tissues of the head and neck caused by contact with, for example, heat, steam, chemicals, or electricity.

**Exclusions:**

- Burn of eye or ocular adnexa (NE00)
- Burn of mouth or pharynx (NE02)

**ND96****Burn of hip or leg, except ankle or foot**

Injury to the tissues of the hip and leg (except ankle and foot) caused by contact with, for example, heat, steam, chemicals, or electricity.

**Exclusions:** Burn of ankle or foot (ND97)

ND96.0

**Burn of hip or leg, except ankle or foot, epidermal burn**

ND96.1

**Burn of hip or leg, except ankle or foot, superficial partial thickness burn**

ND96.2

**Burn of hip or leg, except ankle or foot, deep partial thickness burn**

ND96.3

**Burn of hip or leg, except ankle or foot, full thickness burn**

ND96.4

**Burn of hip or leg, except ankle or foot, deep full thickness or complex burn**

ND96.Z

**Burn of hip and leg except ankle and foot, depth of burn unspecified****ND97****Burn of ankle or foot**

Injury to the tissues of the ankle and foot caused by contact with, for example, heat, steam, chemicals, or electricity.

ND97.0

**Burn of ankle or foot, epidermal burn**

ND97.1

**Burn of ankle or foot, superficial partial thickness burn**

ND97.2

**Burn of ankle or foot, deep partial thickness burn**

ND97.3

**Burn of ankle or foot, full thickness burn**

ND97.4

**Burn of ankle or foot, deep full thickness or complex burn**

ND97.Z

**Burn of ankle and foot, depth of burn unspecified****ND99****Acute skin injury due to skin contact with corrosive substance**

ND99.1

**Chemical burn due to skin contact with corrosive substance**

A chemical skin burn is an acute, severe irritant reaction to skin contact with corrosive or caustic substances sufficient to cause cell necrosis. The corrosive potential of substances depends on their chemical properties, concentration and pH, and on the duration and type of skin contact. Occlusion has an additive effect.

**ND9Y****Burns of external body surface, other specified site****Coding Note:**

Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

**ND9Z****Burns of external body surface, unspecified site****Coding Note:**

Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

#### Burns of eye or internal organs (NE00-NE0Z)

Injury confined to the tissues of the eye and internal organs caused by contact with, for example, heat, steam, chemicals, or electricity.

##### **NE00**

#### **Burn of eye or ocular adnexa**

Injury confined to the tissues of the eye and adnexa caused by contact with, for example, heat, steam, chemicals, or electricity.

##### **NE01**

#### **Burn of respiratory tract**

Injury to the tissues of the respiratory tract caused by contact with, for example, heat, steam, chemicals, or electricity.

##### **NE02**

#### **Burn of other internal organs**

Injury to other internal organs caused by contact with, for example, heat, steam, chemicals, or electricity.

##### **NE0Z**

#### **Burns of unspecified internal organ**

#### Burns of multiple or unspecified body regions (NE10-NE11)

Injury to the tissues of the multiple and unspecified body regions caused by contact with, for example, heat, steam, chemicals, or electricity.

**Coding Note:** Each burn should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

##### **NE10**

#### **Burns of multiple body regions**

**Coding Note:** Each burn should be coded separately. This code should be used only when the detail of the specific burn is unknown, or it is not possible to code each burn.

##### **NE11**

#### **Burn of unspecified body region**

---

##### **NE2Z**

#### **Burns, unspecified**

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

## Frostbite (NE40-NE4Z)

Frostbite is injury from ice formation within tissues resulting from contact with cold air, liquids or metals. It is most commonly due to excessive exposure of skin to sub-zero environmental temperatures. The risk of injury is exacerbated by wind. The most commonly affected sites are fingers, toes, ears, nose, cheeks and chin with injury limited to skin and soft tissues. Full thickness skin necrosis and injury to deeper structures including muscles and bone may occur with prolonged exposure to cold.

**Exclusions:** Hypothermia (NF02)

### NE40

#### **Superficial frostbite**

Frostbite in which injury is confined to the skin, where there may be epidermal blistering and sloughing but no significant tissue necrosis.

**Inclusions:** frostbite with partial-thickness skin loss

**Exclusions:** Superficial frostbite involving multiple body regions (NE42)

### NE41

#### **Frostbite with tissue necrosis**

Frostbite with localised tissue necrosis of skin and deeper tissues

**Exclusions:** Frostbite with tissue necrosis involving multiple body regions (NE42)

### NE42

#### **Frostbite involving multiple body regions**

Frostbite is damage to tissues as the result of exposure to low environmental temperatures.

**Coding Note:** Each frostbite injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

### NE4Z

#### **Frostbite, unspecified**

## Harmful effects of substances (NE60-NE6Z)

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

### NE60

#### **Harmful effects of drugs, medicaments or biological substances, not elsewhere classified**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

**Exclusions:** Alcohol intoxication (6C40.3)

pathological drug intoxication (6C40-6C5Z)

hypersensitivity reaction to correctly administered drug (4A80-4A8Z)

Reactions or intoxications due to drugs administered to fetus or newborn (KD34)

**NE61****Harmful effects of or exposure to noxious substances, chiefly nonmedicinal as to source, not elsewhere classified**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

**Exclusions:**               corrosions (ND90-NE2Z)  
                                       Bacterial foodborne intoxications (1A10-1A1Z)

**NE6Z****Harmful effects of unspecified substance**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

Injury or harm arising from surgical or medical care, not elsewhere classified  
 (NE80-NE8Z)

**Exclusions:**           Attention to artificial openings (QB62)  
                               adverse effects of drugs and medicaments (NE60)  
                               Fitting or adjustment of external prosthetic device (QB31.0)  
                               burns and corrosions from local applications and irradiation (ND90-NE2Z)  
                               poisoning and toxic effects of drugs and chemicals (NE60)  
                               Colostomy malfunction (DE12.0)  
                               Disorders of fluid, electrolyte or acid-base balance (5C70-5C7Z)  
                               Other functional disturbances following cardiac surgery (BE11)  
                               Dumping syndrome (DE11)  
                               Postmastectomy lymphoedema syndrome (BE1B.0)  
                               Postsurgical blind-loop syndrome (DE13)

**Coded Elsewhere:**   Complications of intrauterine procedures, not elsewhere classified (KD39)  
                               Complications of anaesthesia during pregnancy (JA67)  
                               Complications of anaesthesia during labour or delivery (JB0C)  
                               Complications of anaesthesia during the puerperium (JB43)

**NE80****Injury or harm arising following infusion, transfusion or therapeutic injection, not elsewhere classified**

**Exclusions:**           bone-marrow transplant rejection (NE84)  
                               toxic endophthalmitis (9C21)

**NE80.0               Air embolism following infusion, transfusion or therapeutic injection**

**NE80.1               ABO incompatibility reaction**

**Inclusions:**           Reaction to blood-group incompatibility in infusion or transfusion

**NE80.2               Rh incompatibility reaction**

**Inclusions:**           Reaction due to Rh factor in infusion or transfusion

|                     | A condition caused by hypermetabolism in response to certain anaesthetic drugs. This condition is characterised by hyperthermia, tachycardia, tachypnoea, increased carbon dioxide production, increased oxygen consumption, acidosis, muscle rigidity, and rhabdomyolysis. This condition may be associated with genetic mutation.                                                                                                                                                               |
| <b>NE87</b>         | <b>Failed or difficult intubation</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                     | Intubation complicated by patient anatomy or physiology which complicates, prolongs or prevents intubation.                                                                                                                                                                                                                                                                                                                                                                                       |
|                     | Complication is defined as saturations falling more than 20% below baseline, significant damage to lips, teeth or tongue, or regurgitation and aspiration of gastric contents. Prolongation is defined as either intubation using special techniques (fiberoptic intubation) or three or more attempts at intubation using direct laryngoscopy or videolaryngoscopy when performed by a fully trained and expert anesthetist. Failure is defined as the abandonment of the attempt at intubation. |

**NE89****Awareness under general anaesthesia**

The experience by patients whose expectation was oblivion under general anaesthesia of awareness of their surroundings. This may include some or all of the following sensations: visual, auditory, tactile (including presence of a tracheal tube or airway device, manipulation), motion, pain and paralysis.

**Exclusions:** Awareness of heartbeat (MC81.2)

**NE8Y****Other specified injury or harm arising from surgical or medical care, not elsewhere classified****NE8Z****Injury or harm arising from surgical or medical care, not elsewhere classified, unspecified**

## Other or unspecified effects of external causes (NF00-NF0Z)

**Coded Elsewhere:** Anaphylaxis (4A84)

**NF00****Effects of radiation, not elsewhere classified**

**Exclusions:** Sunburn (EJ40)  
 Burns (ND90-NE2Z)  
 specified adverse effects of radiation, such as leukaemia (2A20-2B3Z)  
 Radiation gastritis (DA42.81)  
 Acute pulmonary manifestations due to radiation (CA82.0)  
 Radiation duodenitis (DA51.53)  
 Radiation oesophagitis (DA24.22)  
 Radiation-induced colitis (DB33.41)

**NF01****Effects of heat**

Adverse effects resulting from a failure to maintain normal body core temperature on exposure to excessive heat. Vigorous exercise, insulation by clothing (e.g. protective clothing) or an inability to sweat normally (e.g. genetic hypohidrosis or autonomic neuropathy) may be contributory factors.

**Inclusions:** heat prostration NOS

**Exclusions:** Sunburn (EJ40)  
 Burns (ND90-NE2Z)  
 Malignant hyperthermia due to anaesthesia (NE86)  
 Dermatoses provoked by heat or electricity (EJ10-EJ1Y)

**NF01.0****Heat stroke**

Elevation of core body temperature above 40.6 degrees centigrade due to environmental heat exposure and a failure of thermoregulation. This is a potentially fatal disorder, particularly in infants and children.

**Exclusions:** Exertional heat stroke (NF06.0)

**Coded Elsewhere:** Environmental hyperthermia of newborn (KD10)

| <b>NF03.0</b> | <b>Chilblains</b><br>Chilblains are the result of cold-induced damage principally to the microvasculature of acral skin in susceptible individuals. They are commonest in the winter months in cold, damp climates. They present as itchy or painful red-purple macules, papules or plaques, most commonly affecting the fingers and toes, though other body extremities including the heels, nose and ears can be involved. Because of insulation from core body temperature, other areas, especially the lateral thighs, may be involved in areas where there is a thick layer of subcutaneous fat. |
| <b>NF03.1</b> | <b>Immersion hand or foot</b><br>Injury to the skin and soft tissues of the feet and, less commonly, the hands due to prolonged exposure to non-freezing cold and wet conditions. Originally reported in soldiers as trench foot during World War I, it is now more commonly seen in the homeless either because of vagrancy or as the result of conflict. Affected extremities are initially cold, numb, swollen and pulseless; this is followed by a period of intense hyperaemia and pain which then gives way to increased sweating and cold sensitivity.                                         |
| <b>NF03.Y</b> | <b>Other specified effects of reduced temperature</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**NF0A.Y**      Other early complication of trauma, not elsewhere classified

**NF0A.Z**      Early complications of trauma, not elsewhere classified

**NF0Y**      Other specified effects of external causes

**NF0Z**      Unspecified effects of external causes

---

**NF2Y**      Other specified injury, poisoning or certain other consequences of external causes

**NF2Z**      Unspecified injury, poisoning or certain other consequences of external causes

## CHAPTER 23

---

### External causes of morbidity or mortality

This chapter has 568 four-character categories.

Code range starts with PA00

The WHO definition of an 'injury' is: 'Injuries are caused by acute exposure to physical agents such as mechanical energy, heat, electricity, chemicals, and ionizing radiation interacting with the body in amounts or at rates that exceed the threshold of human tolerance. In some cases, (for example, drowning and frostbite), injuries result from the sudden lack of essential agents such as oxygen or heat. Injuries may be categorized in a number of ways. However, for most analytical purposes and for identifying intervention opportunities, it is especially useful to categorize injuries according to whether or not they were deliberately inflicted and by whom. Commonly used categories are:

- unintentional (i.e. accidental)
- intentional (i.e. deliberate):
- interpersonal (e.g. assault and homicide)
- self-harm (e.g. abuse of drugs and alcohol, self-mutilation, suicide)
- legal intervention (e.g. action by police or other law enforcement personnel)
- war, civil insurrection and disturbances (e.g. demonstrations and riots)
- undetermined intent

Regarding the collection of events that cause injuries, a set of definitions apply. See section 'Definition related to transport accidents'.

This chapter contains the following top level blocks:

- Unintentional causes
- Intentional self-harm
- Assault
- Undetermined intent
- Exposure to extreme forces of nature
- Maltreatment
- Legal intervention
- Armed conflict
- Causes of healthcare related harm or injury

#### Unintentional causes (PA00-PB6Z)

Unintentional transport injury event (PA00-PA5Z)

[Definitions in relation to transport injury events]

| <b>PA2D</b> | Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of an all-terrain vehicle                               |
| <b>PA2E</b> | Unintentional land transport event unknown whether traffic or nontraffic injuring a rider of an animal                                                |
| <b>PA2F</b> | Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of an animal-drawn vehicle                              |
| <b>PA2Y</b> | Unintentional land transport injury event unknown whether traffic or nontraffic injuring a user of other specified transport                          |

**PA2Z** Unintentional land transport injury event unknown whether traffic or nontraffic injuring a user of unspecified transport

Unintentional railway transport injury event (PA30-PA3Z)

**PA30** Unintentional railway transport injury event with collision or derailment

**PA31** Unintentional railway transport injury event without collision or derailment

**PA3Z** Unintentional railway transport injury event of unspecified type

Unintentional water transport injury event (PA40-PA4Z)

**PA40** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed

**PA40.0** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning

**PA40.1** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing other injury

**PA40.Z** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing unspecified injury

**PA41** Unintentional water transport injury event with water vessel damaged, disabled or destroyed

**PA41.0** Unintentional water transport injury event with water vessel damaged, disabled or destroyed, causing submersion or drowning

*Inclusions:* drowning and submersion due to boat sinking

*Exclusions:* Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning (PA40.0)

**PA41.Z** Unintentional water transport injury event with water vessel damaged, disabled or destroyed, causing unspecified injury

**PA4Z** Unintentional water transport injury event with damage to water vessel unspecified

**PA50** Unintentional air or space transport injury event

**PA50.0** Unintentional air or space transport injury event with aircraft or spacecraft not damaged, disabled or destroyed

**PA50.1** Unintentional air or space transport injury event with aircraft or spacecraft damaged, disabled or destroyed

**PA50.Z** Unintentional air or space transport injury event, unspecified

**PA5Y** Other specified unintentional transport injury event

**PA5Z****Unintentional transport injury event, unspecified**

Unintentional fall (PA60-PA6Z)

**Exclusions:**

Fall in health care (PL14.E)  
Tendency to fall (MB47.C)  
Unintentional land transport traffic event injuring a rider of an animal (PA0E)  
Fall from animal (PA1E)  
Fall from burning building or structure (PB10)  
Fall into fire (PB10-PB1Z)  
Unintentional immersion, submersion or falling into water (PA90-PA9Z)  
Fall into or from machinery (PB50-PB5B)  
Fall from railway train or railway vehicle (PA31)

**PA60****Unintentional fall on the same level or from less than 1 metre****Exclusions:**

Fall in health care (PL14.E)  
Fall while in hospital (PL14.E)  
Fall from hospital bed (PL14.E)

**PA61****Unintentional fall from a height of 1 metre or more****Exclusions:**

Fall in health care (PL14.E)  
Fall from animal (PA1E)

**PA6Z****Unintentional fall from unspecified height**

Unintentional contact with person, animal or plant (PA70-PA7Z)

**PA70****Unintentionally struck, kicked, or bumped by person****PA71****Unintentionally struck, kicked, or bumped by animal****PA72****Unintentionally stepped on or crushed by person****PA73****Unintentionally stepped on or crushed by animal****PA74****Unintentionally bitten by person****PA75****Unintentionally bitten by animal****PA76****Unintentionally scratched or clawed by person****PA77****Unintentionally scratched or clawed by animal****PA78****Unintentionally stung or envenomated by animal****PA79****Unintentionally injured by contact with plant**

|      |                                                                            |
|------|----------------------------------------------------------------------------|
| PA7Y | Other specified type of unintentional contact with person, animal or plant |
| PA7Z | Unintentional contact with person, animal or plant, type unspecified       |

Unintentional exposure to object, not elsewhere classified (PA80-PA8Z)

**Exclusions:** Intentional self-harm by exposure to object, not elsewhere classified (PC50-PC5Z)

Assault by exposure to object not elsewhere classified (PE20-PE4Z)

Unintentional contact with person, animal or plant (PA70-PA7Z)

**PA80**      **Unintentionally struck by projectile from firearm**

**PA80.0**      **Unintentionally struck by projectile from handgun**

**Inclusions:** gun for single hand use

**PA80.1 Unintentionally struck by projectile from rifle, shotgun or larger firearm**

**PA80.2 Unintentional exposure to other and unspecified firearm**

**Inclusions:** shot NOS

**PA81**      **Unintentionally struck by moving object**

## PA82 Unintentional striking against stationary object

**PA83**      **Unintentionally cut or pierced by sharp object**

**PA83.0** Unintentionally cut or pierced by knife, sword, or dagger

**PA83.1 Unintentionally cut or pierced by sharp glass**

**PA83.2** Unintentionally cut or pierced by other or unspecified sharp object

**PA84**      **Unintentionally struck by blunt object**

**PA85** Unintentionally caught, crushed, jammed or pinched between objects

**PA8Y** Unintentional exposure to other specified object, not elsewhere classified

|      |                                               |
|------|-----------------------------------------------|
| PA8Z | Unintentional exposure to object, unspecified |
|------|-----------------------------------------------|

Unintentional immersion, submersion or falling into water (PA90-PA9Z)

**PA90**      **Unintentional drowning or submersion, while in body of water**

**PA91** Unintentional drowning or submersion, following fall into body of water

**PA92**      **Unintentional injury other than drowning following fall into body of water**

## Unintentional immersion, submersion or falling into water, unspecified

## Unintentional threat to breathing (PB00-PB0Z)

- |             |                                                                                                                                                                                                                             |

| <b>PB1Y</b> | <b>Unintentional exposure to other specified thermal mechanism</b> |
| <b>PB1Z</b> | <b>Unintentional exposure to unspecified thermal mechanism</b>     |

Unintentional exposure to or harmful effects of substances (PB20-PB36)

Unintentional harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

Unintentional exposure to or harmful effects of drugs, medicaments or biological substances (PB20-PB29)

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB20**

**Unintentional exposure to or harmful effects of opioids or related analgesics**

**Inclusions:** accidental overdose of opioids or related analgesics

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB21**

**Unintentional exposure to or harmful effects of sedative hypnotic drugs or other CNS depressants**

**Inclusions:** accidental overdose by sedative hypnotic drugs or other CNS depressants

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB22**

**Unintentional exposure to or harmful effects of psychostimulants**

**Inclusions:** accidental overdose of psychostimulants

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB23**

**Unintentional exposure to or harmful effects of cannabinoids or hallucinogens**

**Inclusions:** accidental overdose of cannabinoids or hallucinogens

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB24**

**Unintentional exposure to or harmful effects of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs**

**Inclusions:** accidental overdose of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB25**

**Unintentional exposure to or harmful effects of antidepressants**

**Inclusions:** accidental overdose of antidepressants

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB26**      **Unintentional exposure to or harmful effects of antipsychotics**  
*Inclusions:*                accidental overdose of antipsychotics  
*Exclusions:*                Substances associated with injury or harm in therapeutic use  
                                          (PL00-PL0Z)

**PB27**      **Unintentional exposure to or harmful effects of antiepileptics or antiparkinsonism drugs**  
*Inclusions:*                accidental overdose of antiepileptics or antiparkinsonism drugs  
*Exclusions:*                Substances associated with injury or harm in therapeutic use  
                                          (PL00-PL0Z)

**PB28**      **Unintentional exposure to or harmful effects of other or unspecified drug, medicament or biological substance**

**PB29**      **Unintentional exposure to or harmful effects of multiple drugs, medicaments or biological substances**  
*Inclusions:*                accidental overdose of multiple drugs, medicaments or  
                                          biological substances

Unintentional exposure to or harmful effects of substances chiefly nonmedicinal as to source (PB30-PB36)

**PB30**      **Unintentional exposure to or harmful effects of alcohols**

**PB31**      **Unintentional exposure to or harmful effects of organic solvents**

**PB32**      **Unintentional exposure to or harmful effects of carbon monoxide**

**PB33**      **Unintentional exposure to or harmful effects of pesticides**

**PB34**      **Unintentional exposure to or harmful effects of corrosive substances**

**PB35**      **Unintentional exposure to or harmful effects of halogen derivatives of aliphatic or aromatic hydrocarbons**

**PB36**      **Unintentional exposure to or harmful effects of other or unspecified substances chiefly nonmedicinal as to source**

Unintentional exposure to other mechanism (PB50-PB5B)

**PB50**      **Unintentional exposure to foreign body in orifice**

**PB51**      **Unintentional exposure to electric current**

**PB52**      **Unintentional exposure to sunlight**

**PB53**      **Unintentional exposure to radiation**

**PB54**      **Unintentional exposure to high or low air pressure or changes in air pressure**

|               |                                                                                          |

| <b>PC62</b> | <b>Intentional self-harm by injury other than drowning while in body of water</b>        |

**PC63**            Intentional self-harm by injury other than drowning following fall into body of water

**PC6Z**            Intentional self-harm by immersion, submersion or falling into water, unspecified

Intentional self-harm by threat to breathing (PC70-PC7Z)

**PC70**            Intentional self-harm by threat to breathing by suffocation from object covering mouth or nose

**PC71**            Intentional self-harm by threat to breathing by hanging

**PC72**            Intentional self-harm by threat to breathing by strangulation

**PC73**            Intentional self-harm by threat to breathing by external compression of airways or chest

*Exclusions:*            Intentional self-harm by threat to breathing by hanging (PC71)  
                                 Intentional self-harm by threat to breathing by strangulation (PC72)

**PC74**            Intentional self-harm by inhalation or ingestion of gastric contents

**PC75**            Intentional self-harm by threat to breathing by inhalation or ingestion of liquids

**PC76**            Intentional self-harm by threat to breathing by inhalation or ingestion of food

**PC77**            Intentional self-harm by threat to breathing by inhalation or ingestion of other objects or materials

**PC78**            Intentional self-harm by threat to breathing from low oxygen environment

**PC7Y**            Other specified intentional self-harm by threat to breathing

**PC7Z**            Intentional self-harm by threat to breathing, unspecified

Intentional self-harm by exposure to thermal mechanism (PC80-PC8Z)

**PC80**            Intentional self-harm by exposure to controlled fire

**PC81**            Intentional self-harm by exposure to uncontrolled fire

**PC82**            Intentional self-harm by exposure to ignition or melting of material

**PC83**            Intentional self-harm by contact with hot object or liquid

**PC84**            Intentional self-harm by exposure to steam, hot vapour, air or gases

**PC85**            Intentional self-harm by exposure to excessive heat

**PC86**            Intentional self-harm by exposure to excessive cold

**PC8Y**            **Intentional self-harm by exposure to other specified thermal mechanism**

**PC8Z**            **Intentional self-harm by exposure to unspecified thermal mechanism**

Intentional self-harm by exposure to or harmful effects of substances (PC90-PD05)

Intentional self harm by harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

Use additional extension code, if desired, to identify substance.

**Exclusions:**            Substances associated with injury or harm with therapeutic intent (PL00-PL0Z)

Intentional self-harm by exposure to or harmful effects of drugs, medicaments or biological substances (PC90-PC99)

**PC90**            **Intentional self-harm by exposure to or harmful effects of opioids or related analgesics**

**PC91**            **Intentional self-harm by exposure to or harmful effects of sedative hypnotic drugs or other CNS depressants**

**PC92**            **Intentional self-harm by exposure to or harmful effects of psychostimulants**

**PC93**            **Intentional self-harm by exposure to or harmful effects of cannabinoids or hallucinogens**

**PC94**            **Intentional self-harm by exposure to or harmful effects of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs**

**PC95**            **Intentional self-harm by exposure to or harmful effects of antidepressants**

**PC96**            **Intentional self-harm by exposure to or harmful effects of antipsychotics**

**PC97**            **Intentional self-harm by exposure to or harmful effects of antiepileptics or antiparkinsonism drugs**

**PC98**            **Intentional self-harm by exposure to other and unspecified drug, medicament and biological substance**

**PC99**            **Intentional self-harm by exposure to or harmful effects of multiple drugs, medicaments or biological substances**

Intentional self-harm by exposure to or harmful effects of substances chiefly nonmedicinal as to source (PD00-PD05)

**PD00**            **Intentional self-harm by exposure to or harmful effects of alcohols**

|             |                                                                                                                                     |

## Assault (PD50-PF2Z)

Assault by transport events (PD50-PD9Z)

|             |                                                                                                   |
|-------------|---------------------------------------------------------------------------------------------------|
| <b>PD50</b> | <b>Assault by land transport road traffic injury event</b>                                        |
| <b>PD51</b> | <b>Assault by land transport off-road nontraffic injury event</b>                                 |
| <b>PD52</b> | <b>Assault by land transport injury event unknown whether road traffic or off-road nontraffic</b> |

**PD53**      **Assault by railway transport injury event**

Assault by water transport injury event (PD60-PD6Z)

**PD60**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed**

**PD60.0**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing submersion or drowning**

**PD60.1**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing other injury**

**PD60.Z**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing unspecified injury**

**PD61**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed**

**PD61.0**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning**

**PD61.1**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing other injury**

**PD61.Y**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing unspecified injury**

**PD61.Z**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, unspecified**

**PD6Z**      **Assault by water transport injury event with damage to water vessel unspecified**

Assault by air or space transport injury event (PD70-PD7Z)

**PD70**      **Assault by air or space transport injury event with aircraft or spacecraft damaged, disabled or destroyed**

**PD71**      **Assault by air or space transport injury event with aircraft or spacecraft not damaged, disabled or destroyed**

**PD7Z**      **Assault by air or space transport injury event with damage to aircraft or spacecraft unspecified**

**PD9Y**      **Other specified assault by transport injury event**

**PD9Z**      **Assault by transport injury event, unspecified**

Assault by causing a fall or jump (PE00-PE0Z)

**PE00**      **Assault by causing a fall or jump on same level or from less than 1 metre**

**PE01** Assault by causing a fall or jump from a height of 1 metre or more

**PE0Z** Assault by causing a fall or jump from unspecified height

Assault by contact with person, animal or plant (PE10-PE1Z)

**PE10** Assault by being struck, kicked or bumped by person

**PE11** Assault by being struck, kicked or bumped by animal

**PE12** Assault by being crushed or stepped on by person

**PE13** Assault by being crushed or stepped on by animal

**PE14** Assault by being bitten by person

**PE15** Assault by being bitten by animal

**PE16** Assault by being scratched or clawed by person

**PE17** Assault by being scratched or clawed by animal

**PE18** Assault by being stung or envenomated by animal

**PE19** Assault by contact with plant

**PE1Y** Other specified type of assault by contact with person, animal or plant

**PE1Z** Assault by contact with person, animal or plant, type unspecified

Assault by exposure to object not elsewhere classified (PE20-PE4Z)

**PE20** Assault by projectile from firearm

**PE20.0** Assault by projectile from handgun

**PE20.1** Assault by projectile from rifle, shotgun or larger firearm

**PE20.Y** Assault by being struck by projectile from other specified firearm

**PE20.Z** Assault by being struck by projectile from unspecified firearm

**PE21** Assault by being struck by moving object, not elsewhere classified

**PE22** Assault by striking against stationary object

Assault by being cut or pierced by sharp object (PE30-PE3Z)

*Inclusions:* assault by being stabbed NOS

**PE30** Assault by being cut or pierced by knife, sword, or dagger

**PE31** Assault by being cut or pierced by sharp glass

**PE3Z** Assault by being cut or pierced by other or unspecified sharp object

|             |                                                                                 |

#### Exposure to extreme forces of nature (PJ00-PJ0Z)

|             |                                                                   |
|-------------|-------------------------------------------------------------------|
| <b>PJ00</b> | <b>Victim of lightning</b>                                        |
| <b>PJ01</b> | <b>Victim of earthquake</b>                                       |
| <b>PJ02</b> | <b>Victim of cataclysmic earth movements caused by earthquake</b> |
| <b>PJ03</b> | <b>Victim of tsunami</b>                                          |
| <b>PJ04</b> | <b>Victim of volcanic eruption</b>                                |
| <b>PJ05</b> | <b>Victim of avalanche, landslide or other earth movements</b>    |
| <b>PJ06</b> | <b>Victim of cataclysmic storm</b>                                |
| <b>PJ07</b> | <b>Victim of flood</b>                                            |
| <b>PJ0Y</b> | <b>Exposure to other specified forces of nature</b>               |
| <b>PJ0Z</b> | <b>Exposure to unspecified forces of nature</b>                   |

## Maltreatment (PJ20-PJ2Z)

Non-accidental acts of physical force, forced or coerced sexual acts, verbal or symbolic acts, or significant caregiving omissions that result in harm or have a reasonable potential for harm. These categories are applied to the victim of the maltreatment, not the perpetrator.

**PJ20**

### **Physical maltreatment**

Non-accidental acts of physical force that result, or have reasonable potential to result, in physical harm or that evoke significant fear. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ21**

### **Sexual maltreatment**

In adults, forced or coerced sexual acts or sexual acts with someone who is unable to consent; in children, sexual acts involving a child that are intended to provide sexual gratification to an adult. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ22**

### **Psychological maltreatment**

Non-accidental verbal or symbolic acts that result in significant psychological harm. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ2Y**

### **Other specified maltreatment**

**PJ2Z**

### **Maltreatment, unspecified**

## Legal intervention (PJ40-PJ4Z)

**Coding Note:** Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

**PJ40**

### **Legal intervention involving projectile from firearm**

**Inclusions:** Legal intervention involving rifle pellet or rubber bullet

**PJ41**

### **Legal intervention involving other projectile**

**PJ42**

### **Legal intervention involving blunt object**

**Inclusions:** Hit, struck by blunt object during legal intervention

**PJ43**

### **Legal intervention involving sharp object**

**Inclusions:** Cut during legal intervention

**PJ44**

### **Legal intervention involving electric weapon**

**PJ45**

### **Legal intervention involving explosive**

**PJ46**

### **Legal intervention involving gas**

**PJ47**

### **Legal intervention involving application of physical force**

**PJ4Y****Legal intervention involving other means****Coding Note:**

Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

**PJ4Z****Legal intervention involving unspecified means****Coding Note:**

Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

## Armed conflict (PJ60-PK6Z)

### Explosion of marine weapons during armed conflict (PJ60-PJ6Z)

**PJ60****Explosion of depth-charge or marine mine during armed conflict****PJ61****Explosion of torpedo during armed conflict****PJ62****Explosion of sea-based artillery shell during armed conflict****PJ6Y****Explosion of other marine weapons during armed conflict****PJ6Z****Explosion of unspecified marine weapon**

### Attack on or destruction of aircraft during armed conflict (PJ70-PJ7Z)

**PJ70****Attack on or destruction of aircraft during armed conflict due to enemy fire or explosives****PJ71****Attack on or destruction of aircraft during armed conflict due to collision with other aircraft****PJ7Y****Other destruction of aircraft during armed conflict****PJ7Z****Unspecified destruction of aircraft during armed conflict**

### Other explosions or fragments during armed conflict (PJ80-PJ8Z)

**Exclusions:**

Attack on or destruction of aircraft during armed conflict due to enemy fire or explosives (PJ70)

Use of nuclear weapons during armed conflict (PK10-PK1Z)

Injury event occurring after cessation of armed conflict (PK40-PK4Z)

**PJ80****Explosion of missile during armed conflict****PJ81****Explosion of aerial bomb during armed conflict****PJ82****Explosion of munitions or weapons during armed conflict****PJ83****Explosion of improvised explosive device during armed conflict**

- PJ8Y**            **Other explosion or fragments during armed conflict**
- PJ8Z**            **Unspecified explosion or fragments during armed conflict**

Fires, conflagrations or hot substances during armed conflict (PJ90-PJ9Z)

- PJ90**            **Use of gasoline bomb during armed conflict**
- PJ91**            **Use of flamethrower during armed conflict**
- PJ92**            **Use of incendiary bullets during armed conflict**
- PJ9Y**            **Other specified fires, conflagrations or hot substances during armed conflict**
- PJ9Z**            **Unspecified fire, conflagration or hot substance during armed conflict**

Firearm discharge or other forms of conventional warfare during armed conflict (PK00-PK0Z)

- PK00**            **Use of rubber bullets during armed conflict**
- PK01**            **Use of firearm pellets during armed conflict**
- PK02**            **Other firearms discharge during armed conflict**
- PK03**            **Other weapons use during armed conflict**
- PK04**            **Unarmed combat during armed conflict**
- PK0Z**            **Other and unspecified forms of conventional weapons use during armed conflict**

Use of nuclear weapons during armed conflict (PK10-PK1Z)

- PK10**            **Thermal or blast effects of nuclear weapon during armed conflict**
- PK11**            **Nuclear radiation effects of nuclear weapon during armed conflict**
- PK1Z**            **Other and unspecified effect of nuclear weapon during armed conflict**

Use of biological weapons during armed conflict (PK20-PK2Z)

- PK20**            **Use of weaponised micro-organisms during armed conflict**
- PK2Y**            **Use of other specified biological weapons during armed conflict**
- PK2Z**            **Use of unspecified biological weapons during armed conflict**

Chemical weapons or other forms of unconventional warfare during armed conflict (PK30-PK3Z)

- PK30**            **Use of chemical weapons during armed conflict**

Surgical or other medical devices, implants or grafts associated with injury or harm in therapeutic use (PK90-PK9C.4)

Medical devices could be associated with injury or harm in therapeutic use through different mechanisms: failure, malfunction, dislodgement, misconnection, removal, unclean/unsterile, use error, inappropriate for related task, poor presentation or packaging, lack of presentation

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** medical devices associated with adverse incidents due to external causes classified elsewhere (PL12)

## **PK90**

### **Anaesthesiology devices associated with injury or harm**

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

#### **PK90.0 Anaesthesiology devices associated with injury or harm, diagnostic or monitoring devices**

An anaesthesiology device was involved in an incident that occurred in a diagnostic or monitoring task

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

#### **PK90.1 Anaesthesiology devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices**

An anaesthesiology device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

#### **PK90.2 Anaesthesiology devices associated with injury or harm, prosthetic or other implants, materials or accessory devices**

Anaesthesiology related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

|                     | <b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z) |

- PK96.1      Obstetric or gynaecological devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices**  
An obstetric or gynaecological device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
- Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
- PK96.2      Obstetric or gynaecological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices**
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
- Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
- PK96.3      Obstetric or gynaecological devices associated with injury or harm, surgical instruments, materials or devices**  
Obstetric or gynaecological related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
- Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
- PK96.4      Obstetric or gynaecological devices associated with injury or harm, miscellaneous devices, not elsewhere classified**
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
- Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
- PK96.Y      Other specified obstetric or gynaecological devices, implants or grafts associated with injury or harm**
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
- PK96.Z      Obstetric or gynaecological devices, implants or grafts associated with injury or harm, unspecified**
- Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**PK97****Ophthalmic devices, implants or grafts associated with injury or harm**

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK97.0****Ophthalmic devices associated with injury or harm, diagnostic or monitoring devices**

An ophthalmic device was involved in an incident that occurred in a diagnostic or monitoring task

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK97.1****Ophthalmic devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices**

An ophthalmic device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK97.2****Ophthalmic devices associated with injury or harm, prosthetic or other implants, materials or accessory devices**

Ophthalmic related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK97.3****Ophthalmic devices associated with injury or harm, surgical instruments, materials or devices**

Ophthalmic related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

| <b>Coding Note:</b> | Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm. |
| <b>PK9C.3Z</b>      | Other or unspecified medical devices associated with injury or harm, surgical instruments, materials or devices, unspecified                            |
| <b>Coding Note:</b> | Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm. |

**PK9C.4 Other or unspecified medical devices associated with injury or harm, miscellaneous devices, not elsewhere classified**

**Coding Note:** Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

Situations where a substance (drug or medicament) causes harm, in the context of intentional use for therapeutic purposes

**Coding Note:** Code first the injury or harm associated with the substance. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** accidents in the technique of administration of drugs, medicaments and biological substances in medical and surgical procedures (PL13)

**PL00 Drugs, medicaments or biological substances associated with injury or harm in therapeutic use**

**Coding Note:** Code first the injury or harm associated with the substance. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm (QA70-QA7Z)

**PL01 Complementary or traditional medicines associated with injury or harm in therapeutic use**

**Coding Note:** Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**PL01.0 Complementary or traditional medicines associated with injury or harm in therapeutic use, Herbal Preparations or Formulas**

**Coding Note:** Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**PL01.1 Complementary or traditional medicines associated with injury or harm in therapeutic use, Dietary Supplements, Vitamins or Minerals**

**Coding Note:** Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**PL01.2 Complementary or traditional medicines associated with injury or harm in therapeutic use, Complementary or Traditional Medicines, not elsewhere classified**

**Coding Note:** Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Other specified external causes of morbidity or mortality**

**PL2Z**

**External causes of morbidity or mortality, unspecified**

## CHAPTER 24

---

### Factors influencing health status or contact with health services

This chapter has 334 four-character categories.

Code range starts with QA00

Categories in this chapter are provided for occasions when circumstances other than a disease, injury or external cause classifiable elsewhere are recorded as "diagnoses" or "problems". This can arise in two main ways:

1. When a person who may or may not be sick encounters the health services for some specific purpose, such as to receive limited care or service for a current condition, to donate an organ or tissue, to receive prophylactic vaccination or to discuss a problem which is in itself not a disease or injury.
2. When some circumstance or problem is present which influences the person's health status but is not in itself a current illness or injury. Such circumstance or problem may be elicited during population surveys, when the person may or may not be currently sick, or be recorded as additional information to be borne in mind when the person is receiving care for some illness or injury.

This chapter contains the following top level blocks:

- Reasons for contact with the health services
- Factors influencing health status

#### Reasons for contact with the health services (QA00-QD3Z)

**Coded Elsewhere:** Gender incongruence (HA60-HA6Z)

Contact with health services for purposes of examination or investigation (QA00-QA0Z)

**Exclusions:** examinations related to pregnancy and reproduction (QA20-QA4Z)  
Clinical findings in blood, blood-forming organs, or the immune system  
(MA10-MA1Y)

#### **QA00**

#### **General examination or investigation of persons without complaint or reported diagnosis**

**Exclusions:** Special screening examination for infectious diseases (QA08)  
Examination or encounter for administrative purposes (QA01)  
Special screening examination for neoplasms (QA09)  
Special screening examination for other diseases or disorders (QA0A)

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>QA00.0</b>  | <b>General adult medical examination</b><br>Encounter for periodic examination (annual) (physical) and any associated laboratory and radiologic examinations on adult.<br><b>Exclusions:</b> Routine child health examination (QA00.1)<br>Routine general health check-up of defined subpopulation (QA03)<br>Routine newborn health examination (QA00.2)<br>Symptoms, signs or clinical findings, not elsewhere classified (Chapter 21) |
| <b>QA00.1</b>  | <b>Routine child health examination</b><br>Routine health check for child over 28 days of age through 19 years of age.<br><b>Exclusions:</b> Health supervision or care of abandoned infant (QC22)<br>Health supervision or care of other healthy infant or child (QC20-QC2Z)                                                                                                                                                           |
| <b>QA00.2</b>  | <b>Routine newborn health examination</b><br>Health examination for infant under 29 days of age<br><b>Exclusions:</b> Routine child health examination (QA00.1)                                                                                                                                                                                                                                                                         |
| <b>QA00.3</b>  | <b>General mental examination</b><br><b>Exclusions:</b> examination requested for medicolegal reasons (QA04)                                                                                                                                                                                                                                                                                                                            |
| <b>QA00.4</b>  | <b>Examination of potential donor of organ or tissue</b>                                                                                                                                                                                                                                                                                                                                                                                |
| <b>QA00.5</b>  | <b>Examination for normal comparison or control in clinical research programme</b>                                                                                                                                                                                                                                                                                                                                                      |

Health care related circumstances influencing the episode of care without injury or harm  
(QA50-QB0Z)

Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

**Exclusions:** Mode of injury or harm associated with a surgical or other medical procedure (PL11)

**QA50**

**Embolisation without injury or harm**

An embolisation without documented injury or harm occurs when a solid object within the venous or arterial circulation propagates to a distal location and becomes lodged there.

**Exclusions:** Embolisation, as mode of injury or harm (PL11.2)

**QA51**

**Foreign body accidentally left in body without injury or harm**

A foreign body is any solid material not normally found in the human body. It is accidentally left in the body if there was no specific intention to keep it in the body.

**Exclusions:** Foreign body accidentally left in body, as mode of injury or harm (PL11.3)

**QA52**

**Failure of sterile precautions without injury or harm**

Standard procedures designed to minimize the risk of hospital acquired infection were not followed or were insufficient, without documented injury or harm.

**Exclusions:** Failure of sterile precautions, as mode of injury or harm (PL11.4)

**QA53**

**Pressure as potential mode of injury without injury or harm**

Pressure as a potential mode of injury, includes factors such as: body positioning, retractors, or other instruments with direct pressure, without documented injury or harm.

**Exclusions:** Pressure, as mode of injury or harm (PL11.6)

**QA5Y**

**Other specified circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm**

**QA5Z**

**Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm, unspecified**

Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**Exclusions:** Mode of injury or harm associated with a surgical or other medical device, implant or graft (PL12)

**QA60**

**Structural device failure without injury or harm**

Mechanical or material device failure not related to the installation of the device without any documented injury or harm.

**Exclusions:** Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)

Structural device failure, as mode of injury or harm (PL12.0)

**QA61**

**Functional device failure without injury or harm**

A device not working or operating correctly, or that has stopped functioning after a period of function, but without documented injury or harm to the patient.

**Exclusions:** Retained intrauterine device without injury or harm in non-pregnant uterus (QA21.60)

Retained intrauterine contraceptive device in pregnancy (JA65.5)

Breakage of device without documented injury or harm (QA60)

Functional device failure, as mode of injury or harm (PL12.1)

**QA62**

**Dislodgement, misconnection or de-attachment of a surgical or medical device without injury or harm**

A device that has moved out of place, become disconnected, loosened or unstable, but without documented injury or harm.

**Exclusions:** Dislodgement, misconnection or de-attachment, as mode of injury or harm (PL12.4)

**QA63**

**Obstruction of device without injury or harm**

A device that has become obstructed or blocked but without any documented injury or harm.

**Exclusions:** Obstruction of device, as mode of injury or harm (PL12.3)

**QA64**

**Operator error without injury or harm**

Incorrect, or improper maintenance or installation of device without documented injury or harm due to operator error.

**Exclusions:** Operator error, as mode of injury or harm (PL12.5)

**QA65**

**Combination or interaction of operator error and device failure without injury or harm**

Combination of device failure (structural or functional) and process/procedural error (poor training, maintenance, incorrect installation) in device use or maintenance without documented injury or harm.

**Exclusions:** Combination or interaction of operator error and device failure, as mode of injury or harm (PL12.6)

**QA6Y**

**Other specified circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm**

**QA6Z**

**Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm, unspecified**

Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm (QA70-QA7Z)

**Exclusions:** Mode of injury or harm associated with exposure to a drug, medicament or biological substance (PL13)

**QA70**

**Overdose of substance without injury or harm**

Overdose of a substance occurs when a patient is given more of a prescribed drug or other substance than is intended. Can be the result of inaccurate measurement of drug, including oral administration. No injury or harm occurred as a result.

**Exclusions:** Overdose of substance, as mode of injury or harm (PL13.0)

**QA71**

**Underdosing without injury or harm**

Under-dosing occurs when a patient takes less of a medication than is prescribed by the provider or the manufacturer's instructions without documented injury or harm. This can be the result of inaccurate measurement of a drug, including oral administration. No injury or harm occurred as a result.

**Exclusions:** Underdosing, as mode of injury or harm (PL13.1)

**QA72**

**Incorrect substance without injury or harm**

Incorrect substance administration occurs when a substance is given which was not the intended or prescribed drug and does not result in injury or harm.

**Exclusions:** Incorrect substance, as mode of injury or harm (PL13.3)

**QA73**

**Incorrect route of administration without injury or harm**

Incorrect or wrong route of administration without documented injury or harm.

**Exclusions:** Incorrect route of drug or medicament, as mode of injury (PL13.50)

**QA74**

**Unspecified appropriateness of dosing or administration without injury or harm**

Unspecified administration of dosage or route without documented injury or harm.

**Exclusions:** Delayed treatment without injury or harm (QA8B)

**QA75**

**Incorrect duration of administration or course of therapy without injury or harm**

Incorrect duration of administration or course of therapy including extended period of time or too brief in duration without documented injury or harm.

**Exclusions:** Incorrect duration of drug or medicament, as mode of injury (PL13.53)

**QA76**

**Medication or substance that is known to be an allergen without injury or harm**

Medication that has previously been identified as an allergen to the patient is administered, but does not result in injury or harm.

**Exclusions:** Medication or substance that is known to be an allergen, as mode of injury or harm (PL13.6)

**QA77**

**Medication or substance that is known to be contraindicated for the patient without injury or harm**

Prescription or non-prescription drug or other substance that has a medical reason for why it should not be used that is administered and does not result in injury or harm.

**Exclusions:** Medication or substance that is known to be an allergen without injury or harm (QA76)  
Medication or substance that is known to be contraindicated for the patient, as mode of injury or harm (PL13.7)

**QA78**

**Expired or deteriorated medication or substance without injury or harm**

Administration of a medication that has passed the manufacturer's expiration date. Administration of a medication which has become impaired or inferior in quality, functioning, or condition. No injury or harm occurred as a result.

**Exclusions:** Expired or deteriorated medication or substance, as mode of injury or harm (PL13.8)

**QA79**

**Drug or substance interactions without injury or harm**

A drug interaction is a situation in which a substance affects the activity of another drug when both are administered together. Includes increased effectiveness, decreased effectiveness or a new effect that is not produced from either drug on its own. No injury or harm occurred as a result.

**Exclusions:** Drug or substance interactions, as mode of injury or harm (PL13.9)

**QA7A**

**Inappropriate stoppage or discontinuation of drug without injury or harm**

Drug administration cancelled before prescribed or patient stopped taking drug without provider instructions. No injury or harm occurred as a result.

**Exclusions:** Inappropriate stoppage or discontinuation of drug, as mode of injury or harm (PL13.A)

**QA7Y**

**Other specified circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm**

**QA7Z**

**Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm, unspecified**

Circumstances associated with other aspects of care influencing the episode of care without injury or harm (QA80-QA8Z)

**QA80**

**Non-administration of necessary drug without injury or harm**

Prescribed drug not given. Missed dose, drug not started, drug delayed resulting in missed dose, but no documented injury or harm resulted.

**Exclusions:** Delayed treatment without injury or harm (QA8B)  
Non-administration of necessary drug (PL14.0)

**QA81**

**Non-provision of necessary procedure without injury or harm**

Medically ordered procedure not performed in the episode of care (interrupted, cancelled).

**Exclusions:** Delayed treatment without injury or harm (QA8B)  
Non provision of necessary procedure (PL14.1)

**QA82**

**Problem associated with physical transfer of patient without injury or harm**

Fall, bump, slip, entanglement, drop of patient during movement with healthcare personnel, without documented injury or harm

**Exclusions:** Problem associated with physical transfer of patient (PL14.2)

**QA83**

**Mismatched blood used in transfusion without injury or harm**

Blood product (e.g. packed red blood cells, platelets, plasma) improperly matched with patient; wrong blood product administered to patient without documented injury or harm.

**Exclusions:** Mismatched blood used in transfusion (PL14.3)

**QA84**

**Other problem with transfusion without injury or harm**

Transfusion interruption or delay (e.g. took too long to administer – clotted or had to be discarded); transfusion line issues: cracked, leaked a substantial amount of blood so that insufficient amount reached patient; large amount of air infused without documented injury or harm.

**Exclusions:** Other problem associated with transfusion (PL14.4)

**QA85**

**Problem with physical restraints without injury or harm**

Restraints not attached properly and not effective (e.g. restraints came undone); restraint broken; restraint too tight but problem identified before injury occurred

**Exclusions:** Problem associated with physical restraints (PL14.5)

**QA86**

**Problem with isolation protocol without injury or harm**

Patient not monitored as frequently as required or ordered; or patient mistakenly or inappropriately put on isolation; or isolation technique broken and contamination possible by patient, health provider, or visitor. No injury or harm resulted.

**Exclusions:** Problem associated with isolation protocol (PL14.6)

**QA87**

**Problem with clinical documentation without injury or harm**

Documentation on wrong patient; incomplete documentation; incorrect documentation identified as inconsistent with other source, but without documented injury or harm to the patient.

**Exclusions:** Problem associated with clinical documentation (PL14.7)

**QA88**

**Problem with clinical software without injury or harm**

Software malfunction causing interruption in processing of patient orders, laboratory or other diagnostic results, data entry, electronic communication, or data output, but without documented injury or harm.

**Exclusions:** Problem associated with clinical software (PL14.8)

**QA89**

**Incorrect diagnosis without injury or harm**

Diagnosis changed after further study and as a result, treatment was incorrect; misdiagnosis; conflicting diagnoses

**Exclusions:** Incorrect diagnosis (PL14.9)

**QA8A**

**Delayed diagnosis without injury or harm**

Diagnosis not established in a timely manner; symptoms but no diagnosis were documented. In this situation, no documented injury or harm resulted.

**Exclusions:** Delayed diagnosis (PL14.A)

**QA8B**

**Delayed treatment without injury or harm**

Delayed commencement of therapy (e.g. drug therapy, physical therapy, occupational therapy, radiation therapy, surgery, psychological or psychiatric therapy, dressing change, irrigation, etc.).

delayed surgery or procedure

delayed administration of drug or medicament

**Exclusions:** Delayed treatment (PL14.B)

**QA8C**

**Problem with transitions of care, hand offs, or handovers without injury or harm**

Miscommunication, errors, or no communication when changing setting of care from one patient care unit, department, or institution to another

**Exclusions:** Problem associated with transitions of care, hand offs, or handovers (PL14.D)

**QA8D**

**Patient received diagnostic test or treatment intended for another patient without injury or harm**

Patient order for testing or treatment performed on wrong patient (e.g. lab test, diagnostic imaging test, physical or psychological therapy, dressing change, irrigation, etc.).

Patient received drug or medicament meant for another patient, but no harm resulted.

**Exclusions:** Patient received diagnostic test or treatment intended for another patient (PL14.C)

| <b>QB2Y</b> | <b>Donors of other specified organs or tissues</b>                                                                                |
| <b>QB2Z</b> | <b>Donors of organs or tissues, unspecified</b>                                                                                   |

Fitting, adjustment or management of devices (QB30-QB3Z)

**Exclusions:** Contact with health services for issue of repeat prescription (QB92)  
Presence of devices other than cardiac or vascular implants (QB51)  
malfunction or other complications of device (NE80-NE8Z)

|                |                                                                   |
|----------------|-------------------------------------------------------------------|
| <b>QB30</b>    | <b>Adjustment or management of implanted devices</b>              |
| <b>QB30.0</b>  | <b>Adjustment or management of implanted hearing device</b>       |
| <b>QB30.00</b> | Adjustment or management of bone conduction device                |
| <b>QB30.01</b> | Adjustment or management of cochlear device                       |
| <b>QB30.0Y</b> | Adjustment or management of other implanted hearing device        |
| <b>QB30.0Z</b> | Adjustment or management of implanted hearing device, unspecified |
| <b>QB30.1</b>  | <b>Adjustment or management of infusion pump</b>                  |

|                |                                                                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>QB30.2</b>  | <b>Adjustment or management of cardiac devices</b>                                                                                                     |
|                | <b>Exclusions:</b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82) |
| <b>QB30.20</b> | Adjustment or management of cardiac pacemaker                                                                                                          |
|                | <b>Exclusions:</b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82) |
| <b>QB30.21</b> | Adjustment or management of cardiac resynchronization therapy defibrillator                                                                            |
|                | <b>Exclusions:</b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82) |
| <b>QB30.22</b> | Adjustment or management of cardiac resynchronization therapy pacemaker                                                                                |
|                | <b>Exclusions:</b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82) |
| <b>QB30.23</b> | Adjustment or management of cardioverter-defibrillator                                                                                                 |
|                | <b>Exclusions:</b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82) |
| <b>QB30.2Y</b> | Other specified adjustment or management of cardiac devices                                                                                            |
| <b>QB30.2Z</b> | Adjustment or management of cardiac devices, unspecified                                                                                               |
| <b>QB30.3</b>  | <b>Adjustment or management of vascular access device</b>                                                                                              |
| <b>QB30.4</b>  | <b>Adjustment or management of implanted gastric device</b>                                                                                            |
| <b>QB30.5</b>  | <b>Fitting or adjustment of urinary device</b>                                                                                                         |
| <b>QB30.6</b>  | <b>Adjustment or management of breast implant</b>                                                                                                      |
| <b>QB30.7</b>  | <b>Adjustment or removal of myringotomy stent or tube</b>                                                                                              |

| <b>QB7Y</b> | <b>Other specified convalescence</b>                                                                                                                                                                                                         |
| <b>QB7Z</b> | <b>Convalescence, unspecified</b>                                                                                                                                                                                                            |

#### Contact with health services for specific surgical interventions (QB80-QB8Z)

**Coding Note:** Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.

**Exclusions:** follow-up examination for medical surveillance after treatment (QA00-QA0Z)

|             |                                                              |
|-------------|--------------------------------------------------------------|
| <b>QB80</b> | <b>Contact with health services for prophylactic surgery</b> |
|-------------|--------------------------------------------------------------|

**QB80.0**      **Contact with health services for prophylactic surgery for risk-factors related to malignant neoplasms**

**QB80.Y**      **Other specified contact with health services for prophylactic surgery**

**QB80.Z**      **Contact with health services for prophylactic surgery, unspecified**

**QB81**      **Contact with health services for plastic surgery for unacceptable cosmetic appearance other than hair transplant**

**Exclusions:**      plastic and reconstructive surgery following healed injury or operation (QB83)

**QB82**      **Contact with health services for routine or ritual circumcision**

**QB83**      **Follow-up care involving plastic surgery**

**Inclusions:**      plastic and reconstructive surgery following healed injury or operation  
repair of scarred tissue

**QB84**      **Follow-up care involving removal of fracture plate or other internal fixation device**

**Exclusions:**      removal of external fixation device (QB80-QB8Z)

**QB85**      **Attention to surgical dressings, drains or sutures**

**QB86**      **Contact with health services for hair transplant**

**QB8Y**      **Contact with health services for other specified surgical interventions**

**Coding Note:**      Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.

**QB8Z**      **Contact with health services for specific surgical interventions, unspecified**

**Coding Note:**      Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.

Contact with health services for nonsurgical interventions not involving devices (QB90-QB9Z)

**QB90**      **Contact with health services for ear piercing**

**QB91**      **Contact with health services for piercing of body site other than ear**

|               | Isolation is the 'separation, for the period of communicability, of infected persons from others in such places and under such conditions as to prevent or limit the direct or indirect transmission of the infectious agent from those infected to those who are susceptible to infection or who may spread agent to others'. Isolation measures can be undertaken in hospitals or homes, as well as in alternative facilities. |

| <b>QD84.0</b> | <b>Occupational exposure to dust</b><br>Occupational exposure to dust is exposure to dust during work, at the work location, or from the work location. The primary route of exposure is inhalation.<br><br>Dusts are technically defined as dry particle aerosols produced by mechanical processes such as breaking, grinding, and pulverizing. Dusts may be of biological or nonbiological origin.                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>QD85</b>   | <b>Burnout</b><br>Burnout is a syndrome conceptualized as resulting from chronic workplace stress that has not been successfully managed. It is characterised by three dimensions: 1) feelings of energy depletion or exhaustion; 2) increased mental distance from one's job, or feelings of negativism or cynicism related to one's job; and 3) a sense of ineffectiveness and lack of accomplishment. Burn-out refers specifically to phenomena in the occupational context and should not be applied to describe experiences in other areas of life.<br><br><b>Exclusions:</b> <ul style="list-style-type: none"> <li>Adjustment disorder (6B43)</li> <li>Disorders specifically associated with stress (6B40-6B4Z)</li> <li>Anxiety or fear-related disorders (6B00-6B0Z)</li> <li>Mood disorders (6A60-6A8Z)</li> </ul> |

Problems associated with education (QD90-QD9Z)

**Exclusions:** factors associated with psychological development (Chapter 06)

**Coded Elsewhere:** Relationships with teachers or classmates (QE50.1)

**QD90 Problem associated with illiteracy or low-level literacy**

**QD91 Problem associated with education unavailable or unattainable**

**QD92 Problem with educational progress**

**Exclusions:** Disorders of intellectual development (6A00)

**QD9Y Other specified problems associated with education**

**QD9Z Problems associated with education, unspecified**

Problems associated with social or cultural environment (QE00-QE0Z)

**Coded Elsewhere:** Acute stress reaction (QE84)

**QE00 Acculturation difficulty**  
Problems resulting from the inability to adjust to a different culture or environment.

**Exclusions:** Disorders specifically associated with stress (6B40-6B4Z)

**QE01 Stress, not elsewhere classified**

**Exclusions:** Problems associated with employment or unemployment  
(QD80-QD8Z)

**QE02 Social role conflict**

**QE03 Social exclusion or rejection**

Exclusion and rejection on the basis of personal characteristics such as physical appearance, sexual orientation, gender identity and expression, illness or behaviour.

**Exclusions:** Target of perceived adverse discrimination or persecution  
(QE04)

**QE04 Target of perceived adverse discrimination or persecution**

Persecution or discrimination, perceived as reality by an individual or real, on the basis of membership in some group (such as defined by skin colour, religion, ethnic origin, sexual orientation, gender identity and expression, etc.) rather than personal characteristics

**Exclusions:** Social exclusion or rejection (QE03)

**QE0Y Other specified problems associated with social or cultural environment**

**QE0Z Problems associated with social or cultural environment, unspecified**

Problems associated with health behaviours (QE10-QE2Z)

**Exclusions:** Difficulty or need for assistance with general life tasks or life management (QF21)

## Hazardous substance use (QE10-QE1Z)

Hazardous substance use is a pattern of psychoactive substance use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of substance use, from the amount used on a given occasion, from risky behaviours associated with substance use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of the substance or to longer-term cumulative effects on physical or mental health or functioning. Hazardous substance use has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of substance use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to substance use (6C40-6C4Z)

### **QE10**

#### **Hazardous alcohol use**

A pattern of alcohol use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of alcohol use, from the amount used on a given occasion, or from risky behaviours associated with alcohol use or the context of use, or from a combination of these. The risk may be related to short-term effects of alcohol or to longer-term cumulative effects on physical or mental health or functioning. Hazardous alcohol use has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of alcohol use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of alcohol (6C40)

### **QE11**

#### **Hazardous drug use**

A pattern of use of psychoactive substance(s) other than nicotine or alcohol that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of substance use, from the amount used on a given occasion, from risky behaviours associated with substance use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of the substance or to longer-term cumulative effects on physical or mental health or functioning. Hazardous drug use has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of drug use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to substance use (6C40-6C4Z)

**QE11.0****Hazardous use of opioids**

A pattern of opioid use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of opioid use, from the amount used on a given occasion, from risky behaviours associated with opioid use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of opioids or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of opioids has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of opioid use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of opioids (6C43)

**QE11.1****Hazardous use of cannabis**

A pattern of cannabis use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of cannabis use, from the amount used on a given occasion, from risky behaviours associated with cannabis use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of cannabis or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of cannabis has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of cannabis use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of cannabis (6C41)

**QE11.2****Hazardous use of sedatives, hypnotics or anxiolytics**

A pattern of use of sedatives, hypnotics or anxiolytics that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of use of sedatives, hypnotics or anxiolytics, from the amount used on a given occasion, from risky behaviours associated with use of sedatives, hypnotics or anxiolytics or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of sedatives, hypnotics or anxiolytics or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of sedatives, hypnotics or anxiolytics has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of use of sedatives, hypnotics or anxiolytics often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of sedatives, hypnotics or anxiolytics (6C44)

**QE11.3****Hazardous use of cocaine**

A pattern of cocaine use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of cocaine use, from the amount used on a given occasion, from risky behaviours associated with cocaine use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of cocaine or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of cocaine has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of cocaine use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of cocaine (6C45)

**QE11.4****Hazardous use of stimulants including amphetamines or methamphetamine**

A pattern of use of stimulants including amphetamines and methamphetamine that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of use of stimulants including amphetamines and methamphetamine, from the amount used on a given occasion, from risky behaviours associated with use of stimulants including amphetamines and methamphetamine or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of stimulants including amphetamines and methamphetamine or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of stimulants including amphetamines and methamphetamine has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of use of stimulants including amphetamines and methamphetamine often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of stimulants including amphetamines, methamphetamine or methcathinone (6C46)

**QE11.5****Hazardous use of caffeine**

A pattern of caffeine use that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of caffeine use, from the amount used on a given occasion, from risky behaviours associated with caffeine use or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of caffeine or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of caffeine has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of caffeine use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of caffeine (6C48)

**QE11.6****Hazardous use of MDMA or related drugs**

A pattern of use of MDMA (3,4-methylenedioxymethamphetamine) or related drugs that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of use of MDMA or related drugs, from the amount used on a given occasion, from risky behaviours associated with use of MDMA or related drugs or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of MDMA or related drugs or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of MDMA or related drugs has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of use of MDMA or related drugs often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of MDMA or related drugs, including MDA (6C4C)

**QE11.7****Hazardous use of dissociative drugs including ketamine or PCP**

A pattern of use of dissociative drugs including ketamine and PCP (phencyclidine) that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of use of dissociative drugs including ketamine and PCP, from the amount used on a given occasion, from risky behaviours associated with use of dissociative drugs including ketamine and PCP or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of dissociative drugs including ketamine and PCP or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of dissociative drugs including ketamine and PCP has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of use of dissociative drugs including ketamine and PCP often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of dissociative drugs including ketamine and phencyclidine [PCP] (6C4D)

**QE11.8****Hazardous use of other specified psychoactive substances**

A pattern of use of other specified psychoactive substances that appreciably increases the risk of harmful physical or mental health consequences to the user or to others to an extent that warrants attention and advice from health professionals. The increased risk may be from the frequency of use of the substance, from the amount used on a given occasion, from risky behaviours associated with use of the substance or the context of use, from a harmful route of administration, or from a combination of these. The risk may be related to short-term effects of the specified substance or to longer-term cumulative effects on physical or mental health or functioning. Hazardous use of other specified psychoactive substances has not yet reached the level of having caused harm to physical or mental health of the user or others around the user. The pattern of substance use often persists in spite of awareness of increased risk of harm to the user or to others.

**Exclusions:** Disorders due to use of other specified psychoactive substances, including medications (6C4E)

**QE21****Hazardous gambling or betting**

Hazardous gambling and betting refers to a pattern of gambling or betting that appreciably increases the risk of harmful physical or mental health consequences to the individual or to others around the individual. The increased risk may be from the frequency of gambling or betting, the amount of time spent on these activities, the context of gambling or betting, the neglect of other activities and priorities, risky behaviours associated with gambling or betting or its context, the adverse consequences of gambling or betting, or from the combination of these factors. The pattern of gambling or betting often persists in spite of awareness of increased risk of harm to the individual or to others. This category may be used when the pattern of gambling or betting warrants attention and advice from health professionals but does not meet the diagnostic requirements for Gambling Disorder.

**Exclusions:** Gambling disorder (6C50)

**QE22****Hazardous gaming**

Hazardous gaming refers to a pattern of gaming, either online or offline, that appreciably increases the risk of harmful physical or mental health consequences to the individual or to others around the individual. The increased risk may be from the frequency of gaming, the amount of time spent on these activities, the neglect of other activities and priorities, risky behaviours associated with gaming or its context, the adverse consequences of gaming, or from the combination of these factors. The pattern of gaming often persists in spite of awareness of increased risk of harm to the individual or to others. This category may be used when the pattern of gaming behaviour warrants attention and advice from health professionals but does not meet the diagnostic requirements for Gaming Disorder.

|               | Personality difficulty refers to pronounced personality characteristics that may affect treatment or health services but do not rise to the level of severity to merit a diagnosis of Personality disorder. Personality difficulty is characterised by long-standing difficulties (e.g., at least 2 years), in the individual's way of experiencing and thinking about the self, others and the world. In contrast to Personality disorders, these difficulties are manifested in cognitive and emotional experience and expression only intermittently (e.g., during times of stress) or at low intensity. The difficulties are associated with some problems in functioning but these are insufficiently severe to cause notable disruption in social, occupational, and interpersonal relationships and may be limited to specific relationships or situations. |

Problems associated with harmful or traumatic events (QE80-QE8Z)

**Exclusions:** Disorders specifically associated with stress (6B40-6B4Z)

**Coded Elsewhere:** Personal history of psychological trauma, not elsewhere classified (QC4Y)

Personal history of physical trauma other than self-harm (QC4Y)

**QE80**

**Victim of crime or terrorism**

**QE81**

**Exposure to disaster, war or other hostilities**

**Exclusions:** Target of perceived adverse discrimination or persecution (QE04)

**QE82**

**Personal history of maltreatment**

Personal history of non-accidental acts of physical force, forced or coerced sexual acts, verbal or symbolic acts, or significant caregiving omissions that result in harm or have a reasonable potential for harm. These categories are applied to the victim of the maltreatment, not the perpetrator.

**Exclusions:** History of spouse or partner violence (QE51.1)

**QE82.0**

**Personal history of physical abuse**

Personal history of non-accidental acts of physical force that result, or have reasonable potential to result, in physical harm or that evoke significant fear. This category is applied to the victim of the maltreatment, not the perpetrator.

**Exclusions:** History of spouse or partner violence, physical (QE51.1)

**QE82.1**

**Personal history of sexual abuse**

Personal history of forced or coerced sexual acts, sexual acts with someone who is unable to consent, or sexual acts involving a child that are intended to provide sexual gratification to an adult. This category is applied to the victim of the maltreatment, not the perpetrator.

**Exclusions:** History of spouse or partner violence, sexual (QE51.1)

**QE82.2**

**Personal history of psychological abuse**

Personal history of non-accidental verbal or symbolic act that results in significant psychological harm. This category is applied to the victim of the maltreatment, not the perpetrator.

**Exclusions:** History of spouse or partner violence, psychological (QE51.1)

**QE82.3**

**Personal history of neglect**

Personal history of egregious acts or omissions by a caregiver that deprive a child of needed age-appropriate care or an adult who is incapable of self-care and that result, or have reasonable potential to result, in physical or psychological harm. This category is applied to the victim of the neglect, not the perpetrator.

**QE82.Y**

**Other specified personal history of maltreatment**

**QE82.Z**

**Personal history of maltreatment, unspecified**

**QE83**

**Personal frightening experience in childhood**

**QE84****Acute stress reaction**

Acute stress reaction refers to the development of transient emotional, somatic, cognitive, or behavioural symptoms as a result of exposure to an event or situation (either short- or long-lasting) of an extremely threatening or horrific nature (e.g., natural or human-made disasters, combat, serious accidents, sexual violence, assault). Symptoms may include autonomic signs of anxiety (e.g., tachycardia, sweating, flushing), being in a daze, confusion, sadness, anxiety, anger, despair, overactivity, inactivity, social withdrawal, or stupor. The response to the stressor is considered to be normal given the severity of the stressor, and usually begins to subside within a few days after the event or following removal from the threatening situation.

**Inclusions:** acute crisis reaction  
acute reaction to stress

**Exclusions:** Post traumatic stress disorder (6B40)

**QE8Y****Other specified problems associated with harmful or traumatic events****QE8Z****Problems associated with harmful or traumatic events, unspecified**

Problems associated with upbringing (QE90-QE9Z)

**QE90****Inadequate parental supervision or control**

Lack of parental knowledge of what the child is doing or where the child is; poor control; lack of concern, understanding or comprehension or lack of attempted intervention when the child is in risky situations.

**QE91****Parental overprotection****QE92****Altered pattern of family relationships in childhood**

Departure of a family member or arrival of a new person into a family resulting in adverse change in child's relationships. May include new relationship or marriage by a parent, death or illness of a parent, illness or birth of a sibling.

**QE93****Removal from home in childhood****QE94****Institutional upbringing**

Group foster care in which parenting responsibilities are largely taken over by some form of institution (such as residential nursery, orphanage, or children's home), or therapeutic care over a prolonged period in which the child is in a hospital, convalescent home or the like, without at least one parent living with the child.

**QE95****Inappropriate parental pressure or other abnormal qualities of upbringing**

Parents forcing the child to be different from the local norm, either sex-inappropriate (e.g. dressing a boy in girl's clothes), age-inappropriate (e.g. forcing a child to take on responsibilities above her or his own age) or otherwise inappropriate (e.g. pressing the child to engage in unwanted or too difficult activities).

**QE96****Events resulting in loss of self-esteem in childhood**

Events resulting in a negative self-reappraisal by the child such as failure in tasks with high personal investment; disclosure or discovery of a shameful or stigmatizing personal or family event; or other humiliating experiences.

**QE9Y****Other specified problems associated with upbringing****QE9Z****Problems associated with upbringing, unspecified**

Acquired absence of body structure (QF00-QF0Z)

**QF00****Acquired absence of limb**

**Inclusions:** postoperative loss of limb

post traumatic loss of limb

**Exclusions:** Other acquired deformities of limbs (FA31)

Congenital absence of thigh or lower leg with foot present (LB9A.3)

Congenital absence of both lower leg and foot (LB9A.7)

Congenital absence of upper arm or forearm with hand present (LB99.4)

**QF01****Acquired absence of organs**

**Exclusions:** postoperative absence of endocrine glands (5D40-5D46)

postoperative absence of spleen (3B81.1)

**QF01.0****Acquired absence of breast**

**Coded Elsewhere:** Traumatic amputation of breast (NB33.1)

**QF01.1****Acquired absence of genital organs**

**Coded Elsewhere:** Aetiological considerations associated with a medical condition, injury, or the effects of surgery or radiation treatment (HA40.0)

**QF01.10****Acquired absence of female genital organs**

**Coded Elsewhere:** Traumatic amputation of entire vulva (NB93.24)

Traumatic amputation of part of vulva (NB93.25)

Female Genital Mutilation (GC51)

**QF01.11****Acquired absence of male genital organs**

**Coded Elsewhere:** Traumatic amputation of entire penis (NB93.20)

Traumatic amputation of part of penis (NB93.21)

Traumatic amputation of entire testes or scrotum (NB93.22)

Traumatic amputation of part of testes or scrotum (NB93.23)

**QF01.Y****Other specified acquired absence of organs****QF01.Z****Acquired absence of organs, unspecified**

## CHAPTER 25

---

### Codes for special purposes

This chapter has 17 four-character categories.

Code range starts with RA00

This chapter contains the following top level blocks:

- International provisional assignment of new diseases of uncertain aetiology and emergency use
- National provisional assignment of new diseases of uncertain aetiology

International provisional assignment of new diseases of uncertain aetiology and emergency use (RA00-RA09)

#### **RA00**

#### **Conditions of uncertain aetiology and emergency use**

##### **RA00.0**

##### **Vaping related disorder**

Disorder resulting from inhaling a vaporized solution (aerosol) which frequently contains flavourants, usually dissolved into Propylene Glycol or Glycerin, or both, and may or may not contain doses of nicotine, and other substances and additives with the use of electronic nicotine delivery systems (ENDS) or electronic non-nicotine delivery systems (ENNDS).

In the affected individual, infections as cause of the damage are unlikely or should have been excluded.

Relevant findings include proof of presence of pulmonary infiltrate, such as opacities, on plain film chest radiograph or ground-glass opacities on chest CT.

#### **RA01**

##### **COVID-19**

As definition may evolve, the URL for the Global surveillance document will be added as the short description

##### **RA01.0**

##### **COVID-19, virus identified**

##### **Coding Note:**

Use this code when infection with the COVID-19 virus (SARS-CoV-2) has been confirmed by laboratory testing irrespective of severity of clinical signs or symptoms.

##### **Inclusions:**

Coronavirus disease 2019

COVID-19 NOS

##### **Exclusions:**

Coronavirus infection, unspecified site (1D92)

Middle East respiratory syndrome (1D64)

Severe acute respiratory syndrome (1D65)

**RA01.1 COVID-19, virus not identified**

**Coding Note:** Use this code when COVID-19 is diagnosed clinically or epidemiologically but laboratory testing is inconclusive or not available.

**Exclusions:** COVID-19, virus identified (RA01.0)  
Coronavirus infection, unspecified site (1D92)  
Special screening examination for other viral diseases (QA08.5)  
suspected but ruled out by negative laboratory results (QA02)  
confirmed by laboratory testing (RA01.0)

**RA02****Post COVID-19 condition**

Post COVID-19 condition occurs in individuals with a history of probable or confirmed SARS CoV-2 infection, usually 3 months from the onset of COVID-19 with symptoms, and that last for at least 2 months and cannot be explained by an alternative diagnosis. Common symptoms include fatigue, shortness of breath, cognitive dysfunction but also others, and generally have an impact on everyday functioning. Symptoms may be new onset following initial recovery from an acute COVID-19 episode or persist from the initial illness. Symptoms may also fluctuate or relapse over time.

**Coding Note:** This optional code serves to allow the establishment of a link with COVID-19. This code is not to be used in cases that still are presenting COVID-19.

**RA03****Multisystem inflammatory syndrome associated with COVID-19**

**Exclusions:** Kawasaki syndrome (4A44.5)  
Mucocutaneous lymph node syndrome (4A44.5)

**RA04****International emergency code 05****RA05****International emergency code 06****RA06****International emergency code 07****RA07****International emergency code 08****RA08****International emergency code 09****RA09****International emergency code 10**

National provisional assignment of new diseases of uncertain aetiology (RA20-RA26)

**RA20****National emergency code 01****RA21****National emergency code 02****RA22****National emergency code 03****RA23****National emergency code 04****RA24****National emergency code 05**

**RA25**

**National emergency code 06**

**RA26**

**National emergency code 07**

## CHAPTER 26

---

### Supplementary Chapter Traditional Medicine Conditions

This chapter has 1116 four-character categories.

Code range starts with SA00

**This supplementary chapter is a subclassification for optional use. This chapter is not intended for mortality reporting. Coding should always include also a category from the chapters 1-24 of ICD.**

This chapter contains the following top level blocks:

- Module I
- NOT TO BE TRANSLATED - PLEASE NOTE: This whole section is currently under development and is NOT to be translated for now. Title: Module II

## Module I (SA00-SJ1Z)

This module refers to disorders and patterns which originated in ancient Chinese Medicine and are commonly used in China, Japan, Korea, and elsewhere around the world. This list represents a union set of harmonized traditional medicine conditions of the Chinese, Japanese, and Korean classifications. For an extended list of traditional medicine conditions, please refer to the International Classification of Traditional Medicine (ICTM).

### **\*\*Definitions:\*\***

A disorder in traditional medicine, disorder (TM1)[1], refers to a set of dysfunctions in any of the body systems which presents with associated manifestations, i.e. a single or a group of specified signs, symptoms, or findings. Each disorder (TM1) may be defined by its symptomatology, etiology, course and outcome, or treatment response.

1. Symptomatology: signs, symptoms or unique findings by traditional medicine diagnostic methods, including inspection such as tongue examination, history taking (inquiry), listening and smelling examination, palpation such as pulse taking, abdominal examination, and other methods.

2. TM Etiology: the underlying traditional medicine explanatory style, such as environmental factors (historically known in TM translations as the external contractions), emotional factors (historically known in TM translations as the seven emotions), or other pathological factors, processes, and products.

3. Course and outcome: a unique path of development of the disorder (TM1) over time. 4 Treatment response: known response to traditional medicine interventions. In defining a disorder (TM1), symptomatology and etiology are required. Course and outcome, and treatment response are optional.

A pattern in traditional medicine, pattern (TM1), refers to the complete clinical presentation of the patient at a given moment in time including all findings. Findings may include symptomatology or patient constitution, among other things.

1. Symptomatology (as above).

2. Constitution: the characteristics of an individual, including structural and functional characteristics, temperament, ability to adapt to environmental changes, or susceptibility to various health conditions. This is relatively stable, being in part genetically determined while partially acquired.

[1]:'TM1' refers to Traditional Medicine conditions - Module I. The (TM1) designation is used throughout this chapter for every traditional medicine diagnostic category in order to be clearly distinguishable from conventional medicine concepts.

## Traditional medicine disorders (TM1) (SA00-SE5Z)

A disorder in traditional medicine, disorder (TM1), refers to a set of dysfunctions in any of the body systems which presents with associated manifestations, i.e. a single or a group of specified signs, symptoms, or findings. Each disorder (TM1) may be defined by its symptomatology, etiology, course and outcome, or treatment response (please refer to chapter definition for further details).

## Organ system disorders (TM1) (SA00-SB2Z)

## Liver system disorders (TM1) (SA00-SA0Z)

This section contains a series of TM disorders that are all attributable to dysfunction of the liver system. The system consists of the organs liver and gallbladder, tendons, nails, eyes, related meridians and collaterals.

**SA00**

**Hypochondrium pain disorder (TM1)**

A disorder characterized by pain on one or both sides of the hypochondrium. It may be explained by qi dysfunction or disharmony in the meridians of the hypochondrium.

**SA01**

**Jaundice disorder (TM1)**

A disorder characterized by yellow and dark appearance of sclera, skin and urine. They may be explained by dysfunction of liver and spleen systems, and gallbladder, which caused by invading of exogenous pathogenic including dampness, fire or pestilence, and interior injury due to drinking of alcohol or improper diet, or different kinds of dampness, blood stasis and qi stagnation.

**Inclusions:** Acute jaundice  
Yang jaundice  
Yin jaundice

**SA02**

**Liver distension disorder (TM1)**

A disorder characterized by mass or pain in the right hypochondrium relieved with pressure. It may be explained by stagnation of qi and blood and may be a sequelae of other liver system disorders.

**SA03**

**Tympanites disorder (TM1)**

A disorder characterized by severe abdominal distention with taut, yellowish skin, or prominent veins over the abdominal wall. It relates to liver, spleen and kidney system, may be explained by decreased circulation of qi, blood, or water, which cause the fluid or gas accumulation in the peritoneal cavity, an abdominal mass, or intestinal infection.

**SA04**

**Liver abscess disorder (TM1)**

A disorder characterized by sudden onset of fever, a mass or pain in the right, lower hypochondrium. It may be explained by accumulation of fire, heat, toxin, parasites, or other infection, which lead to putrefaction of qi or blood in liver, and cause internal abscess.

**SA05**

**Gallbladder distension disorder (TM1)**

A disorder characterized by recurrent pain with discomfort and distention in the right upper quadrant of the abdomen which may be accompanied by flatulence. It may be explained by stagnation of gallbladder qi, which is caused by obstruction of dampness, heat, phlegm and blood stasis in gallbladder, or emotional upset.

**SA0Y**

**Other specified liver system disorders (TM1)**

**SA0Z**

**Liver system disorders (TM1), unspecified**

## Heart system disorders (TM1) (SA10-SA4Z)

This section contains a series of TM disorders that are all attributable to dysfunction of heart system. The system consists of the heart, vessels, tongue and related meridians and collaterals.

## Palpitation disorders (TM1) (SA10-SA1Z)

A group of disorders characterized by irregular beating of the heart. They may be explained by any dysfunction of qi activity in the chest affecting the functions of the heart system such as from environmental factors, emotional factors, or other pathological processes or products.

### **SA10 Inducible palpitation disorder (TM1)**

A disorder characterized by a sensation of rapid and forceful beating of the heart ascribed to being frightened. It may be explained by excessive mental stimulus or severe stress causing qi deficiency of the heart and gallbladder systems, heart system qi, blood deficiency, or phlegm accumulation and stasis.

**Inclusions:** Fright palpitation disorder (TM1)

### **SA11 Spontaneous palpitation disorder (TM1)**

A disorder characterized by a sensation of rapid and forceful beating of the heart without specific cause. The state of spontaneous palpitation disorder is more severe than that of inducible palpitation disorder in terms of duration, frequency and degree of symptoms.

**Inclusions:** Fearful throbbing disorder (TM1)

### **SA1Y Other specified palpitation disorders (TM1)**

### **SA1Z Palpitation disorders (TM1), unspecified**

## Chest impediment disorders (TM1) (SA20-SA2Z)

A group of disorders characterized by a sensation of squeezing, tightness pressure or paroxysmal pain in the chest. They may be explained by qi stagnation, blood stasis and phlegm obstruction as excess or the insufficiency of qi, yin, yang, or blood.

**Inclusions:** Heart pain disorder (TM1)  
Chest impediment disorder (TM1)

### **SA20 True heart pain disorder (TM1)**

A disorder characterized by persistent, sharp pain in the chest accompanied by sweating, cold limbs, white complexion and blue lips, faint and barely perceptible pulse. It may be explained by stagnation or obstruction of qi, yang, or blood in the chest, deficiency of qi, blood, yin or yang, an accumulation of phlegm blocking the movement of qi, or cold.

### **SA2Y Other specified chest impediment disorders (TM1)**

### **SA2Z Chest impediment disorders (TM1), unspecified**

---

### **SA4Y Other specified heart system disorders (TM1)**

**SA4Z****Heart system disorders (TM1), unspecified****Spleen system disorders (TM1) (SA50-SA5Z)**

This section contains a series of TM disorders that are all attributable to dysfunction of the spleen system. The system consists of the spleen and stomach organs, muscle, lips, mouth, related meridians and collaterals.

**SA50****Dysphagia disorder (TM1)**

A disorder characterized by difficulty swallowing with resulting in food being stuck in the throat, commonly encountered symptom of esophagopathy and other disorders involving the stomach, chest, diaphragm, oral cavity, throat and heart as well as impediment, flaccidity, paralysis and stroke. It may be explained by stagnation of qi, fire, phlegm or fluid consumption.

**Inclusions:** Choke disorder (TM1)

**SA51****Stomach ache disorder (TM1)**

A disorder characterized by pain in the upper abdomen (beneath the xiphoid process). It may be explained by invasion of external cold or heat factors and improper diet; deficiency of yin, yang, qi and blood, qi stagnation and blood stasis that lead to failure of the stomach system qi to descend normally.

**SA52****Epigastric distension disorder (TM1)**

A disorder characterized by long-term distention, swelling, or epigastric fullness. It may be explained by decreased function of the spleen and stomach systems, obstruction of qi activity due to accumulation of phlegm and blood stasis, or other long-term disorders of the stomach system.

**SA53****Epigastric upset disorder (TM1)**

A disorder characterized by the sensation of emptiness in the stomach similar to, but not explained by, hunger, pain or heartburn. It may be explained by improper diet, the environmental factors of fire or cold entering the stomach system, deficiency of yin or blood, or disharmony of the liver and stomach systems.

**SA54****Food retention disorder (TM1)**

A disorder characterized by epigastric or abdominal distension, discomfort, vomiting, constipation, or diarrhea. It may be explained by excessive intake of food or accumulation of food.

**SA55****Diarrhea disorder (TM1)**

A disorder characterized by passing three or more loose or liquid stools per day, or as having abnormally frequent bowel movements. It may be explained by wind, cold, dampness, fire or heat factors, improper diet, emotional upset, or deficiency of yang qi in the spleen or kidney systems.

**SA56****Dysentery disorder (TM1)**

A disorder characterized by potentially recurrent abdominal pain, straining during bowel movement, or diarrhea with mucus or blood. It may be explained by communicable and toxic damp heat in the intestines.

**SA57****Constipation disorder (TM1)**

A disorder characterized by difficult or prolonged defecation. It may be explained by the accumulation of fire or heat factor in the stomach or intestines systems, yang deficiency related accumulation of cold factor, deficiency of qi, blood, yin or fluid, or an abdominal mass.

**SA58****Abdominal pain disorder (TM1)**

A disorder characterized by pain in the abdomen. It may be explained by environmental factors, parasitic infection, improper diet, calculus, deficiency or stagnation of qi or blood, or fecal retention.

**Exclusions:** Lower abdominal colic disorder (TM1)

**SA59****Intestinal abscess disorder (TM1)**

A disorder characterized by fever, paroxysmal pain, and mass in the lower right quadrant of the abdomen. It may be explained by accumulation of fire or heat factors.

**SA5Y****Other specified spleen system disorders (TM1)****SA5Z****Spleen system disorders (TM1), unspecified****Lung system disorders (TM1) (SA60-SA8Z)**

This section contains a series of TM disorders that are all attributable to dysfunction of the lung system. The system consists of the lung and large intestine organs, skin, body hair, nose, related meridians and collaterals.

**SA60****Common cold disorder (TM1)**

A disorder characterized by fever, chills, generalized body pain, stuffy nose, sneezing, throat irritation or cough. It may be explained by wind entering the lung system or invading the body defense exterior.

**Exclusions:** Seasonal cold disorder (TM1)

**Cough disorders (TM1) (SA70-SA7Z)**

A disorder characterized by the presence of cough. It may be explained by external and internal factors entering the lung system, lung irritation by contaminated air, an accumulation of phlegm or fluid in the lung, or deficiency of qi and yin associated with reverse flow of lung system qi.

**SA70****Cough with dyspnea disorder (TM1)**

A disorder characterized by cough with reverse flow of qi in the airways, also known as cough with qi reflux. It may be explained by the reverse flow of lung system qi.

**Exclusions:** Panting disorder (TM1)  
Dyspnea disorder (TM1)

**SA7Y****Other specified cough disorders (TM1)****SA7Z****Cough disorders (TM1), unspecified**

**SA80****Dyspnea disorder (TM1)**

A disorder characterized by difficult and labored breathing. It may be explained by the external and internal factors such as cold, wind or fire, or an accumulation of phlegm.

**Exclusions:** Cough with dyspnea disorder (TM1)

**SA81****Wheezing disorder (TM1)**

A disorder characterized by the sudden onset of shortness of breath with a rough, whistling sound in the airways which may be recurrent. It may be explained by irritation of the lungs associated with the production of phlegm or fluid, airway obstruction, environmental factors, improper diet, or emotional factors.

**SA82****Lung distension disorder (TM1)**

A disorder characterized by persistent distension of the lung, manifested by a sensation of pressure in the chest, chronic cough, shortness of breath or panting, or rib cage expansion, or purple lips and tongue. It may be explained by long term obstruction of the lung system qi or prolonged expansion of the lungs. This may be a long term sequelae of coughing, panting or wheezing.

**SA83****Pleural fluid retention disorder (TM1)**

A disorder characterized by distention and fullness of the chest and hypochondrium, cough with stretching pain. It may be explained by tuberculosis or cancer of the lung and chest and certain systemic diseases, resulting in retention of fluid in the chest cavity and dysfunction of qi activity.

**SA84****Lung heat disorder (TM1)**

A disorder characterized by sudden onset of fever, cough, restlessness, thirst, and chest pain. It may be explained by invasion of the wind-heat factor into the lung system, or with consequent stagnation of heat in the lung leading to failure of the lung system in clearing, depurating and descending.

**SA85****Lung withering disorder (TM1)**

A disorder characterized by shortness of breath, and expectoration of turbid saliva. It may be explained by chronic cough which impairs the lung system qi and consumes fluid, resulting in withering and weakness of the lung lobe.

**SA86****Chest bind disorder (TM1)**

A disorder characterized by local rigidity, fullness or tenderness in the chest or abdomen, including both major and minor chest bind disorder. It may be explained by the environmental factors of fire or cold associated with an accumulation of fluid, phlegm or stagnant food.

**SA8Y****Other specified lung system disorders (TM1)****SA8Z****Lung system disorders (TM1), unspecified**

## Kidney system disorders (TM1) (SA90-SB0Z)

This section contains a series of TM disorders that are all attributable to dysfunction of the kidney system. The system consists of the kidney and bladder organs, bones, hair, ears, genitalia, anus, marrow, related meridians and collaterals.

## Strangury disorders (TM1) (SA90-SA9Z)

A disorder characterized by frequent, painful and difficult urination with decreased output despite a sense of urgency. It may be explained by various factors such as dampness-heat, yin deficiency, qi deficiency, fire stagnation, stone that disturbs qi activity of the bladder system.

### SA90

#### **Stony stranguria disorder (TM1)**

A disorder characterized by stones in the urine, painful and difficult urination that is due to the passage of urinary calculi, abdominal or back pain and sometimes colic that may radiate to the perineum or uremia. It may be explained by accumulation of dampness-heat in the lower energizer which steams and transforms turbid urine into stones retained in the kidney.

### SA91

#### **Heat stranguria disorder (TM1)**

A disorder characterized by urgency and frequency of painful urination with acute onset, chills and fever, lumbar pain and cramps, and distension in the lower abdomen. It may be explained by dampness-heat resulting in the failure of the bladder system to transform qi.

### SA9Y

#### **Other specified strangury disorders (TM1)**

### SA9Z

#### **Strangury disorders (TM1), unspecified**

### SB00

#### **Kidney stagnation disorder (TM1)**

A disorder characterized by a cold feeling in the waist and may be accompanied by heaviness in the lumbar region. It may be explained by sustained cold dampness.

### SB01

#### **Flooding urine disorder (TM1)**

A disorder characterized by thirst and increased volume of diluted urine. It may be explained by deficiency of the kidney system leading to loss of control of urination.

### SB02

#### **Enuresis disorder (TM1)**

A disorder characterized by involuntary urination during sleep. They may be explained by dysfunction of the kidney system qi or the combination of dampness, heat and blood stasis associated with bladder system dysfunction.

### SB03

#### **Turbid urine disorder (TM1)**

A disorder characterized by cloudy or rice water urine. It may be explained by disorders or infections of the kidney, injury, dampness or heat moving downward in the body, or dysfunction of the spleen or kidney systems.

### SB04

#### **Dribbling urinary block disorder (TM1)**

A disorder characterized by partial or complete obstruction of urinary flow. It may be explained by deficient bladder system qi or a blocked urinary passage, such as in prostatic hypertrophy.

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

It may be explained by dysfunction of the kidney system failing to transform qi, and turbid dampness invading the stomach.                                                                                                                                                                                                                                                                                                        |
| <b>SB06</b>   | <b>Edema disorders (TM1)</b><br>A disorder characterized by acute or chronic edema. It may be explained by the dysfunction of the kidney system or related to the dysfunction of spleen and lung systems.                                                                                                                                                                                                                                                                                                                                    |
| <b>SB06.0</b> | <b>Kidney edema disorder (TM1)</b><br>A chronic disorder characterized by long term swelling of lower limbs, low back pain, aversion to cold, frequent urination. It may be explained by the kidney system dysfunction.                                                                                                                                                                                                                                                                                                                      |
| <b>SB06.1</b> | <b>Wind edema disorder (TM1)</b><br>A disorder characterized by the sudden onset of localized swelling, pain in the joints, aversion to wind. It may be explained by the weather factor of wind entering the body, associated with spasm of the blood vessels, blood stasis and water retention.                                                                                                                                                                                                                                             |
| <b>SB06.Y</b> | <b>Other specified edema disorders (TM1)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>SB06.Z</b> | <b>Edema disorders (TM1), unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>SB07</b>   | <b>Lower abdominal colic disorder (TM1)</b><br>A disorder characterized by intense, paroxysmal pain in the lower abdomen, constipation or urinary retention. It may be explained by dysfunction of liver system qi, deficiency of healthy qi particularly in infants or elderly, entry of bowels into the scrotum due to increased abdominal pressure, traumatic injury or blood stasis in the scrotum after surgery, or congenital malformation.<br><br><i>Inclusions:</i> Hernia (TM1)<br><i>Exclusions:</i> Abdominal pain disorder (TM1) |
| <b>SB08</b>   | <b>Premature ejaculation disorder (TM1)</b><br>A disorder characterized by ejaculation within the first minute of sexual intercourse. It may be explained by kidney system qi insecurity.                                                                                                                                                                                                                                                                                                                                                    |
| <b>SB09</b>   | <b>Involuntary ejaculation disorder (TM1)</b><br>A disorder characterized by spontaneous emission of semen occurring at least four times per month. It may be explained by decreased ability of the kidney system to store essence.                                                                                                                                                                                                                                                                                                          |
| <b>SB0A</b>   | <b>Persistent erection disorder (TM1)</b><br>A disorder characterized by abnormal persistent erection with penile tenderness. It may be explained by liver fire, blood stasis, dampness and heat accumulation, yin deficiency fire in the lower part of the body.                                                                                                                                                                                                                                                                            |

**SB0B****Impotence disorder (TM1)**

A disorder characterized by an inability to initiate or maintain an erection, or inability to have sexual intercourse. It may be explained by deficiency of fire in the life gate, deficiency of liver and kidney function, fear or depression.

**SB0C****Male infertility disorder (TM1)**

A disorder characterized by inability to conceive after two years of normal sexual intercourse with average frequency, with a partner with healthy reproductive function. They may be explained by deficiency of kidney system function, stagnation of liver system qi, stagnation of phlegm and dampness, or blood stasis associated with dysfunction of the thoroughfare and conception meridian.

**SB0Y****Other specified kidney system disorders (TM1)****SB0Z****Kidney system disorders (TM1), unspecified****SB2Y****Other specified organ system disorders (TM1)****SB2Z****Organ system disorders (TM1), unspecified**

Other body system disorders (TM1) (SB30-SD6Z)

## Skin and mucosa system disorders (TM1) (SB30-SB7Z)

This section comprises a range of TM disorders grouped together on the basis of their occurring in the skin and mucosa system.

**SB30****Dampness sore disorder (TM1)**

A disorder characterized by a skin rash that is commonly recurrent with exudation, incrustation or itching skin. It may be explained by wind, dampness or heat affecting the skin.

**SB31****Impetigo disorder (TM1)**

A disorder characterized by crusty pustules on the skin, suppuration, yellow exudate, and itching. It may be explained by dampness-heat affecting the spleen or lung systems or other infections.

## Furuncle disorders (TM1) (SB40-SB4Z)

A group of disorders characterized by an acute, easy to change and a greater risk of acute suppurative disease, usually occurring on the face or limbs, appearing small, deep-rooted, hard, swollen, painful and scorching, tending to drain or discharge pus and injuring the sinews and bones. They may be explained by injury as a wound due to stabbing of bamboo and wood, or invasion of pestilence or fire toxin, associated with stagnation of qi and blood.

### **SB40**

#### **Septicemic furunculosis disorder (TM1)**

A disorder characterized as complication of furuncle disorder in which the infection spreads to the blood, leading to diffuse swelling, chills, fever, or restlessness with potential coma or delirium. It may be explained by improper initial treatment, such as squeezing of the furuncle, or excess fire or heat affecting the furuncle.

### **SB4Y**

#### **Other specified furuncle disorders (TM1)**

### **SB4Z**

#### **Furuncle disorders (TM1), unspecified**

### **SB50**

#### **Bed sore disorder (TM1)**

A disorder characterized by localized, superficial skin injury commonly occurring at the coccyx, elbow or spine. It may be explained by prolonged confinement to bed with decreased circulation of qi and blood or pressure, malnutrition or friction of the skin. Recovery is often prolonged due to decreased circulation and continued pressure.

## Abscess disorders (TM1) (SB60-SB6Z)

A group of disorders characterized by inflammation and accumulation of pus associated with a severe local infection, and it occurs between the surface and the flesh in acute suppurative disease. They may be explained by parasitic infection, or heat toxin that is external or endogenous.

### **SB60**

#### **Deep multiple abscess disorder (TM1)**

A disorder characterized by diffusive swelling, light fever with pain, normal skin color with pus inside. It may be explained by pathogenic factors such as heat or dampness that run into the blood vessels and stays in the deep part of the muscles.

### **SB61**

#### **Anal abscess disorder (TM1)**

A disorder characterized by fever, chills, red and swollen anus with burning sensation, pain, and the occurrence of an anal fistula after pustulation. It may be explained by excessive intake of rich or spicy food with downward flow of dampness heat, or accumulation of dampness phlegm, or retention of toxic pathogenic factors in the surrounding area to the anal canal or rectum, stagnation of qi and blood, complicated by heat toxin that putrefies the blood and causes an abscess.

### **SB6Y**

#### **Other specified abscess disorders (TM1)**

### **SB6Z**

#### **Abscess disorders (TM1), unspecified**

**SB70**

**Headed carbuncle disorder (TM1)**

A disorder characterized by the beginning of the skin miliary pus head, inflammatory swelling, quickly spreading deeper and around, forming an acute suppurative disease with profuse pus. It may be explained by accumulation of heat toxin and stagnation of qi and blood.

**SB71**

**Foot dampness itch disorder (TM1)**

A disorder characterized by blisters on the toes with ulceration and subjective feeling of severe itching. It may be explained by dampness or heat moving downward within the body, or wind dryness due to blood deficiency complicated by virulent toxin.

**SB72**

**Tinea circinate disorder (TM1)**

A disorder characterized by a rash or red bumps or blisters, crusty, peeling skin or itching. It may be explained by an accumulation of dampness and heat complicated by viral infection.

**SB73**

**Dry skin disorder (TM1)**

A disorder characterized by dry skin resembling snake skin, with scanty sweating. It may be congenital or explained by malnourishment or deficient blood to the skin associated with wind dryness.

**SB74**

**Gangrene disorder (TM1)**

A disorder characterized by cold and numbness of lower limbs at the early stage, necrosis or loss of the fingers and toes, gangrenous and suppurative toes and fingers, difficulty to heal. It may be explained by congenital deficiency, deficiency of healthy qi, invasion of cold and dampness factors leading to obstruction of meridians with unsmooth flow of qi and blood.

**SB75**

**Wart disorder (TM1)**

A disorder characterized as a benign, superficial skin growth. It may be explained by wind, dampness, heat or fire affecting the skin or viral infection.

**SB76**

**Hand dampness itch disorder (TM1)**

A disorder characterized by rough or thick blisters on the hands with peeling, fissure, pain or itchy skin. It may be explained by wind or dampness affecting the skin, or blood deficiency associated with wind dryness.

**SB77**

**Erysipelas disorder (TM1)**

A disorder characterized by the sudden onset of patches of a red, warm, swollen or painful rash on the skin. It is usually caused by fire toxin due to skin or membrane injury, which combines with blood heat and is retained in the skin.

**SB78**

**Cellulitis disorder (TM1)**

A disorder characterized by acute, diffuse and suppurative inflammation of the subcutaneous tissue. It may be explained by numerous factors, such as wind, dampness, heat, fire, infection or injury.

**SB79**

**Thrush disorder (TM1)**

A disorder characterized by flake-shaped crusts in the oral cavity that looks like goose mouth. It may be explained by an attack of virulent toxin and accumulation of heat in the heart and spleen systems which attack the mouth and tongue.

**SB7A**

**Herpes zoster disorder (TM1)**

A disorder characterized as a painful, blistering skin rash which is typically unilateral and confined to one or more dermatomes, in a snake shaped pattern around waist or hypochondrium. It is explained by dampness-heat in the liver and spleen systems which accumulates in the skin along meridians, complicated by an attack of virulent toxin.

**SB7B**

**Interior haemorrhoid disorder (TM1)**

A disorder characterised by varicosities above the anal dentate line covered with membrane, blood, or stool, prolapse of hemorrhoids, or constipation. It may be explained by wind, dampness, fire, internal accumulation of heat, qi sinking due to spleen system deficiency, or constipation associated with stagnation of qi or blood in the anus.

**SB7C**

**Fissured anus disorder (TM1)**

A disorder characterized by a tear or ulceration of the anal skin or subcutaneous tissue. It may be explained by intestinal dryness or fire or heat retention, deficiency of yin fluid, dry feces or downward flow of dampness heat.

**SB7Y**

**Other specified skin and mucosa system disorders (TM1)**

**SB7Z**

**Skin and mucosa system disorders (TM1), unspecified**

## Female reproductive system disorders (TM1) (including childbirth) (SB80-SC4Z)

This section contains TM disorders associated with menstruation, fertility, pregnancy, puerperium, menopause and other aspects of the female reproductive systems. These may be caused by anatomical particularity of the female reproductive organs and physiologic change in pubertal development, menstruation, pregnancy, parturition and lactation.

## Menstruation associated disorders (TM1) (SB80-SB9Z)

This section contains a variety of TM disorders that differ in severity and clinical form but are all attributable to emmeniopathy. They are classified into four major categories: irregular menorrhagia, abnormal bleeding, dysmenorrhagia and menopausal disorders. Particularly abnormal bleeding is subdivided by criteria of abnormality in menstrual cycle, amount and form.

## Menstruation cycle disorders (TM1) (SB80-SB8Z)

This section contains TM disorders associated with abnormalities of the menstrual cycles.

### SB80

#### **Advanced menstruation disorder (TM1)**

A disorder characterized by an irregular menstrual cycle which is early by seven days or more for at least two consecutive cycles. It may be explained by qi deficiency associated with dysfunction of the thoroughfare and conception meridians, or dysfunction of the uterus associated with excess heat in the thoroughfare and conception meridians.

### SB81

#### **Delayed menstruation disorder (TM1)**

A disorder characterized by an irregular menstrual cycle which is delayed by seven days or more for at least two consecutive cycles. It may be explained by dysfunction of the kidney system or the thoroughfare and conception meridians, blood deficiency, cold factor entering the blood, qi stagnation, obstruction of the thoroughfare and conception meridians by phlegm or dampness factors.

### SB82

#### **Irregular menstruation disorders (TM1)**

A disorder characterized by an irregular menstrual cycle which is either delayed or early by seven days or more. It may be explained by liver system qi stagnation, kidney system dysfunction, disharmony of the thoroughfare and conception meridians or dysfunction of the uterus.

### SB8Y

#### **Other specified menstruation cycle disorders (TM1)**

### SB8Z

#### **Menstruation cycle disorders (TM1), unspecified**

### SB90

#### **Menorrhagia disorder (TM1)**

A disorder characterized by heavy menstrual flow with an otherwise normal cycle. It may be explained by qi deficiency with dysfunction of the thoroughfare and conception meridians or injury of the thoroughfare and conception meridians associated with excess heat or fire.

### SB91

#### **Decreased menstruation disorder (TM1)**

A disorder characterized by significantly decreased menstruation with a duration of less than two days. It is explained by deficient essence and blood and weakness of the uterus, or turbulent blood flow due to meridian obstruction.

**SB92****Prolonged menstruation disorder (TM1)**

A disorder characterized by menstruation which lasts more than seven days but with a normal menstrual cycle. It may be explained by yin deficiency associated with an accumulation of heat or fire in the body, deficient qi failing to control blood circulation, or obstruction of the thoroughfare and conception meridians by blood stasis.

**SB93****Metrorrhagia disorder (TM1)**

A disorder characterized by heavy menstruation or uterine bleeding at irregular intervals, particularly between the expected menstrual periods. It may be explained by dysfunction of the spleen or kidney systems, heat in the blood, blood stasis, or dysfunction of thoroughfare and conception meridians.

**SB94****Amenorrhea disorder (TM1)**

A disorder characterized by lack of menarche in females after puberty (Primary amenorrhoea). It may also refer to any cessation of menstruation which persists for at least three months in the absence of known etiology (Secondary amenorrhoea). It may be explained by dysfunction of the liver and kidney systems, qi and blood deficiency, yin deficiency related to decreased blood volume, deficiency of qi and blood in the thoroughfare and conception meridians, uterine infection, qi and blood stasis, or obstruction of the thoroughfare and conception meridians by dampness or phlegm.

**SB95****Menopausal disorder (TM1)**

A disorder characterized by persistent or intermittent symptoms that present around menopause, including irregular cycles, hot flashes with sweating, dizziness, tinnitus, insomnia, forgetfulness, palpitation, restlessness, irritation, edema, diarrhea, or dry and itching skin. It may be explained by decline of kidney system qi, exhaustion of reproductive substance and imbalance of yin and yang.

**SB96****Dysmenorrhea disorder (TM1)**

A disorder characterized by lower abdominal pain or pain in the lumbosacral region, during menstruation. It may be explained by emotional factors and environmental factors that lead to dysfunction of the thoroughfare and conception meridians, or deficient blood or essence may cause malnutrition of uterine related to deficient blood or essence.

**SB9Y****Other specified menstruation associated disorders (TM1)****SB9Z****Menstruation associated disorders (TM1), unspecified****Pregnancy associated disorders (TM1) (SC00-SC0Z)**

This section contains TM disorders that may occur during pregnancy.

**SC00****Morning sickness disorder (TM1)**

A disorder characterized by nausea, vomiting, or loss of appetite during pregnancy, particularly after eating. It may be explained by reverse flow of the thoroughfare (penetrating) meridian qi or by failure of the stomach system qi to move downwards in the body.

**SC01****Unstable fetus disorder (TM1)**

A disorder characterized by pain in the abdomen or lumbar region, a sense of uterine prolapse or downward pressure or spotting. It may be explained by fetal weakness or disharmony of qi and blood in the thoroughfare (penetrating) and conception meridians.

**SC02****Bladder pressure disorder (TM1)**

A disorder characterized by lower abdominal distention with difficult urination during pregnancy. It may be explained by kidney system dysfunction or qi deficiency associated with the fetus pressing on the bladder.

**Inclusions:**

Shifted colic disorder (TM1)

Shifted bladder disorder (TM1)

Bladder colic disorder (TM1)

**SC03****Eclampsia disorder (TM1)**

A disorder characterized by the sudden onset of dizziness, loss of consciousness, muscle spasms, full body stiffness, involuntary upward gaze, recurrent seizure, or coma that may occur during the late stage of pregnancy, labor or the puerperium. It may be explained by wind generated by the liver system moving throughout the rest of the body, or excess phlegm and internal fire or heat moving upward in the body and affecting the head.

**SC04****Floating sensation pregnancy disorder (TM1)**

A disorder characterized by a sensation of pressure in the abdomen or thorax, dyspnea or irritability during pregnancy. It may be explained by the fetus moving and pressing upwards.

**SC0Y****Other specified pregnancy associated disorders (TM1)****SC0Z****Pregnancy associated disorders (TM1), unspecified****Puerperium associated disorders (TM1) (SC10-SC1Z)**

This section contains a variety of TM disorders that may occur after childbirth.

**SC10****Puerperal abdominal pain disorder (TM1)**

A disorder characterized by paroxysmal pain in the lower abdomen after labor, with potential dizziness, lethargy, palpitation, shortness of breath, or the presence of a mass. It may be explained by deficiency of qi and blood, and / or stagnation of qi and blood.

**SC11****Puerperal wind disorder (TM1)**

A disorder characterized by muscle spasm or joint pain in the extremities, neck stiffness, lockjaw, or severe hyperextension and spasticity of the spine during or after labor. It may be explained by wind, cold, or dampness factors affecting the body, deficiency of qi or blood, yin deficiency, or infection.

**SC12****Hypogalactia disorder (TM1)**

A disorder characterized by decreased or absent lactation. It may be explained by deficiency of qi and blood, or stagnation of liver system qi.

**SC13****Postpartum lochiorrhea disorder (TM1)**

A disorder characterized by presence of vaginal discharge including blood, mucus and tissue for three consecutive weeks following delivery. It may be explained by heat in the blood, blood stasis, qi deficiency, decreased circulation of qi and blood, or infection.

**SC1Y****Other specified puerperium associated disorders (TM1)****SC1Z****Puerperium associated disorders (TM1), unspecified****Other female reproductive system associated disorders (TM1) (SC20-SC2Z)**

This section covers some remaining TM disorders which are not included in other sections on female reproductive system disorders. The section includes TM disorders of the external genitalia and breasts, infections and tumors found in the reproductive organs and psychosomatic disorders.

**SC20****Leukorrhea disorder (TM1)**

A disorder characterized by vaginal discharge with abnormal color, quality and / or odor, or could be accompanied by regional or whole body symptoms. It may be explained by dampness accumulation in the lower part of body, usually accompanied with cold or heat, which cause dysfunction of the spleen system or the kidney system.

**SC21****Vaginal flatus disorder (TM1)**

A disorder characterized by frequent, noisy expulsion of gas from the vagina. It may be explained by dysfunction of qi activity or obstruction of the system by qi or phlegm.

**SC22****Infertility disorder (TM1)**

A disorder characterized by a failure to conceive for one year after normal sexual activity or after previous pregnancy, without taking any contraceptive measures and with a partner who has normal reproductive function. It may be explained by deficiency in the kidney system, depression in the liver system, phlegm, and blood stasis, resulting in dysfunction of thoroughfare (penetrating) and conception vessels as well as the uterus.

**Inclusions:** Female sterility disorder (TM1)

**Exclusions:** Male Infertility disorder (TM1)

**SC23****Uterine mass disorder (TM1)**

A disorder characterized by uterine tumor, often accompanied by advanced, prolonged menstruation or metrorrhagia. It may be explained by stagnation of qi and blood, or stasis of blood.

**SC24****Breast lump disorder (TM1)**

A disorder characterized by pain or palpable lumps in the breast that may alter in size throughout the menstrual cycle. It may be explained by emotional factors or phlegm associated with damage to or disharmony of the thoroughfare (penetrating) and conception meridians.

**SC2Y****Other specified other female reproductive system associated disorders (TM1)****SC2Z****Other female reproductive system associated disorders (TM1), unspecified****SC4Y****Other specified female reproductive system disorders (TM1) (including childbirth)****SC4Z****Female reproductive system disorders (TM1) (including childbirth), unspecified****Bone, joint and muscle system disorders (TM1) (SC50-SC6Z)**

This section contains a series of TM disorders that are all attributable to dysfunction of the bone, joint and muscle system.

**Joint impediment disorders (TM1) (SC50-SC5Z)**

A group of disorders characterized by local or migratory pain, soreness, heaviness, heat, swelling, stiffness or deformity in the body, particularly in the joints. They may be explained by wind, cold, dampness or heat factors and associated with stagnation of qi and blood affecting the meridians related to the muscles, tendons, ligaments, bones or joints.

**SC50****Cold impediment disorder (TM1)**

A disorder characterized by stationary pain aggravated particularly by the cold factor in the body, in the joints. It may be explained by cold, wind, or dampness factors that may lead to obstruction of the meridians.

**SC51****Wind impediment disorder (TM1)**

A disorder characterized by migratory pain in the body, particularly in the joints. It may be explained by wind, cold or dampness factors that may lead to obstruction of the meridians.

**SC52****Dampness impediment disorder (TM1)**

A disorder characterized by heaviness and stationary pain in the body, particularly in the joints. It may be explained by dampness, wind cold or factors that may lead to obstruction of the meridians.

**SC5Y****Other specified joint impediment disorders (TM1)****SC5Z****Joint impediment disorders (TM1), unspecified**

**SC60****Muscle spasm disorder (TM1)**

A disorder characterized by intense, paroxysmal pain of the muscles, tendons or ligaments in the gastrocnemius, fingers or toes, often associated with stiffness or difficult movement. It may be explained by cold and dampness factors affecting the lower limbs or slow, obstructed movement of qi and blood.

**SC61****Lumbago disorder (TM1)**

A disorder characterized by pain in the low back, spine, or paraspinal areas. It may be explained by kidney system disorders, lumbar injury causing qi and blood stagnation or blood stasis, overstrain, or environmental factors of heat, cold, or dampness affecting the body.

**SC62****Numbness disorder (TM1)**

A disorder with characteristic reduced sensitivity to touch, the patient may not feel his or her skin, or experience a crawling like sensation, that calls for scratching. It may be explained by diverse pathological processes, such as blood deficiency.

**SC63****Wilting disorder (TM1)**

A disorder with characteristic weakening and limp sinews that in severe cases leads to muscular atrophy whereby the patient is unable to lift legs and arms, which is the same as atrophy or flaccidity. It may be explained by diverse pathological processes, such as sequela of wind stroke disorder.

**SC6Y****Other specified bone, joint and muscle system disorders (TM1)****SC6Z****Bone, joint and muscle system disorders (TM1), unspecified****Eye, ear, nose and throat system disorders (TM1) (SC70-SC9Z)**

This section contains a series of TM eye, ear, nose and throat system disorders.

**SC70****Night blindness disorder (TM1)**

A disorder characterized by the inability to see clearly at night or in poor light and gradually narrowed vision. It may be congenital or may be explained by deficiency of liver and kidney, and spleen qi deficiency.

**SC71****Wind glaucoma disorder (TM1)**

A disorder characterized by eye distending pain, mydriasis, color changed iris and declining eyesight. It may be explained by emotional depression, qi stagnation, intense fire or heat in the liver and gallbladder systems, or accumulation or stagnation of the aqueous humor.

**SC72****Inflammatory eyelid disorder (TM1)**

A disorder characterized by swelling, pain or redness of the eyelid. It may be explained by exuberant heat and stagnation in the meridians and collaterals.

**SC73****Non-inflammatory eyelid disorder (TM1)**

A disorder characterized by swelling of the eyelid with no change in the local skin color, which is not painful to the touch. It may be explained by spleen qi deficiency and flooding of water-dampness.

**SC74****Corneal opacity disorder (TM1)**

A disorder characterized by gray and white round disks like eye screen in the deep cornea, covers the pupil, obstructing the eyesight. It may be explained by liver channel wind-heat, liver-gallbladder heat, damp-heat brewing internally and vacuity fire upflaming.

**SC75****Tinnitus disorder (TM1)**

A disorder characterized by a sensation of ringing in the ears. It may be explained by deficiency of yin or blood, deficiency of kidney system essence, sinking of middle qi, wind, phlegm, fire or heat originating from inside the body and affecting the head or ears, or the environmental factor of wind entering the ears.

**Exclusions:** Cerebral tinnitus disorder (TM1)

**Deafness disorders (TM1) (SC80-SC8Z)**

A group of disorders characterized by decreased or absent ability to hear with one or both ears. They may be explained by environmental factors of cold or fire entering the body, accumulation of phlegm, deficiency of qi and blood, drug poisoning, ear disorders or other systemic disorders.

**SC80****Sudden deafness disorder (TM1)**

A disorder characterized by sudden loss of hearing in one or both ears that may be accompanied by dizziness or tinnitus. It may be explained by visceral dysfunction, qi and blood stasis, or exuberant pathogenic factors attacking the ears.

**SC81****Gradual deafness disorder (TM1)**

A disorder characterized by a gradual decrease in hearing acuity in one or both ears. It may be explained by visceral dysfunction associated with the normal aging process, insufficiency of qi, blood, yin and yang that fail to nourish the ears, or Blockage of meridians with qi stagnation and blood stasis.

**SC8Y****Other specified deafness disorders (TM1)****SC8Z****Deafness disorders (TM1), unspecified****SC90****Allergic rhinitis disorder (TM1)**

A disorder characterized by sudden or recurrent episodes of itchiness in the nose, sneezing, watery discharge, or nasal congestion. It may be explained by dysfunction of the organs due to retention of wind and cold pathogenic factors and pollen or dust.

**SC91****Nasal sinusitis disorder (TM1)**

A disorder characterized by runny turbid nasal discharge and overabundance, accompanied with headache, nasal congestion, loss of sense of smell (hyposphresia). It may be explained by external pathogenic factors entering the nose, accumulation of heat in the viscera that steams the nasal orifice or organ deficiency with retention of pathogenic factors in the nasal sinuses.

**SC92****Hoarseness disorder (TM1)**

A disorder characterized by a hoarse voice and sore throat. It may be explained by environmental factors of wind-cold or wind-heat entering the throat or malnutrition of the larynx.

**SC93****Tonsillitis disorder (TM1)**

A disorder characterized by fever or sore throat with a red and swollen tonsil or yellowish white pustular spots on the surface, or a swollen, hard and blackish red tonsil. It may be explained by invasion of pathogenic factors in the tonsil, or weakness of viscera with up-flaming of deficiency fire, resulting in stagnation of qi and blood.

**SC9Y****Other specified eye, ear, nose and throat system disorders (TM1)****SC9Z****Eye, ear, nose and throat system disorders (TM1), unspecified****Brain system disorders (TM1) (SD00-SD4Z)**

This section contains a series of TM disorders that are all attributable to the dysfunction of brain system.

**SD00****Facial paralysis disorder (TM1)**

A disorder characterized by sudden onset of facial numbness and distortion. It may be explained by the environmental factor of wind affecting the face.

**Headache disorders (TM1) (SD10-SD1Z)**

A group of disorders characterized by pain in the head. They may be explained by invasion of wind-cold, and damp-heat factors, upper attack of wind yang and fire toxin, blockage of turbid phlegm which leads to unsmooth flow of meridian qi, and reverse flow of qi and blood, or deficiency of qi, blood, nutrients essence, failure of clear yang to ascend, and malnutrition of the brain.

**SD10****Migraine disorder (TM1)**

A disorder characterized by recurrent episodes of sudden, intense headache that may change location or suddenly abate. They may be explained by wind, cold, fire or heat factors, accumulation of phlegm factor or saliva, anger, anxiety or stress, imbalance of yin and yang, or reverse flow of qi and blood to the head.

**SD11****Head wind disorder (TM1)**

A disorder characterized by recurrent headache, dizziness, facial paralysis. It may be explained by heat, cold, or wind factors, by accumulation of phlegm factor or by blood stasis in the vessels of the head.

**SD1Y****Other specified headache disorders (TM1)****SD1Z****Headache disorders (TM1), unspecified**

**SD20****Convulsion disorder (TM1)**

A disorder characterized by neck rigidity, convulsion of the limbs, jaw clenching or intense spasm of the muscles in the back causing the spine to arch backwards. It may be explained by stagnation of dampness-heat, cold or wind factors, blood deficiency, yin deficiency or various infections.

**Inclusions:** Postpartum convulsion disorder (TM1)

**SD21****Cerebral tinnitus disorder (TM1)**

A disorder characterized by a sensation of ringing in the head. It may be explained by malnutrition of the head, accumulation of fire or heat in the head, or accumulation of phlegm and excess dampness.

**Exclusions:** Tinnitus disorder (TM1)

**SD22****Vertigo disorder (TM1)**

A disorder characterized by a sensation of dizziness or that one's surroundings are spinning. They may be explained by deficiency of qi, blood, or nutrients in the head or brain, wind, fire or summer-heat affecting the head, accumulation of phlegm, or blood stasis.

**SD23****Forgetfulness disorder (TM1)**

A disorder characterized by partial or total loss of memory. It may be explained by dysfunction of the heart or spleen systems, senility, accumulation of phlegm or blood stasis.

**SD24****Frequent protrusion of tongue disorder (TM1)**

A disorder characterized by involuntary movement of the tongue and often manifesting as tremor, which can frequently be seen in children with mental underdevelopment. It may be explained by heat accumulation in the heart or spleen systems and their related meridians.

**Wind stroke disorders (TM1) (SD30-SD3Z)**

A group of disorders characterized by sudden fainting, hemiplegia, numbness of limbs, and aphasia due to stiff tongue. It may be explained by reverse flow of qi and blood, obstruction of brain vessels or intracranial bleeding.

**SD30****Prodrome of wind stroke disorder (TM1)**

A disorder characterized by sudden headache, dizziness, numbness or weakness of the limbs. It may be explained by a minor lesion caused by obstruction or spasm of brain vessels or intracranial bleeding.

**Inclusions:** Onset of wind stroke (TM1)

**Exclusions:** Sequela of wind stroke disorder (TM1)

**SD31****Sequela of wind stroke disorder (TM1)**

A disorder characterized by paralysis or partial paralysis of the body, the inability to speak or understand words, dementia, dizziness, walking instability, limb pain or aphasia. It may be explained by malnutrition of the brain and limbs after a wind stroke.

**Exclusions:** Prodrome of wind stroke disorder (TM1)

**SD3Y****Other specified wind stroke disorders (TM1)****SD3Z****Wind stroke disorders (TM1), unspecified****SD40****Syncope disorder (TM1)**

A disorder characterized by temporary loss of consciousness with cold extremities up to the elbows and knees or beyond. It may be explained by qi counterflow due to pathogenic factors.

**Inclusions:**

- Qi syncope disorder (TM1)
- Blood syncope disorder (TM1)
- Phlegm syncope disorder (TM1)
- Hunger syncope disorder (TM1)
- Cold syncope disorder (TM1)

**Exclusions:** wasting thirst related syncope disorder (TM1)

**SD4Y****Other specified brain system disorders (TM1)****SD4Z****Brain system disorders (TM1), unspecified****SD6Y****Other specified other body system disorders (TM1)****SD6Z****Other body system disorders (TM1), unspecified****Qi, blood and fluid disorders (TM1) (SD70-SD7Z)**

This section comprises a range of TM disorders grouped together by imbalance of the qi, blood or fluid. These TM disorders can be caused by changes in one or more of the followings: external environment, mental stress, irregular meals.

**SD70****Qi goiter disorder (TM1)**

A disorder characterized by diffuse swelling at both sides of the thyroid commonly soft with normal skin colour, sometimes accompanied by nodules. It may be explained by depression of liver system qi, qi stagnation, or yang deficiency, yin deficiency, or heat in the liver or heart systems, disharmony of the thoroughfare and conception meridians, or drinking contaminated water with associated accumulation of phlegm and qi in the throat.

**SD71****Wasting thirst disorder (TM1)**

A disorder characterized by increased thirst, excessive eating and increased urination with glycosuria, as well as by potential emaciation. It may be explained by factors which deplete yin fluids in the lung, spleen or kidney systems and generate fire and heat in the body, such as improper food intake, febrile disease, exhaustion, emotional factors.

**SD72****Consumptive disorder (TM1)**

A disorder characterized by lassitude, short breath, pale tongue, weak pulse. It may be explained by insufficiency of qi, blood, yin, yang or decreased functions of organ systems.

**SD7Y****Other specified qi, blood and fluid disorders (TM1)****SD7Z****Qi, blood and fluid disorders (TM1), unspecified****Mental and emotional disorders (TM1) (SD80-SD8Z)**

This section comprises a series of TM disorders that are all attributable to disharmony of emotions or mental state.

**SD80****Lily disorder (TM1)**

A disorder characterized by confusion, decreased ability to concentrate, or a generalized sense of dissatisfaction associated with bitter taste, red urine, thready and rapid pulse, which may be a sequela of an acute febrile disorder or head disorder. It may be explained by insufficiency of yin fluid, imbalance of qi and blood, malnutrition.

**Exclusions:**

Hysteria disorder (TM1)

Insomnia disorders (TM1)

**SD81****Manic disorder (TM1)**

A disorder characterized by psychopathy, mania, restlessness, and irritability. It is caused by emotional upset, imbalance of yin and yang, excess phlegm-fire and blood stasis which disturb the heart spirit.

**SD82****Depression disorder (TM1)**

A disorder characterized by depressed mood with feelings of despair, depressive mood, irritability, weep, hypochondriac pain, pharyngeal foreign body sensation, sleepiness. It may be explained by chemical imbalance in the brain or emotional factors, and the imbalance of qi and blood.

**Inclusions:**

Postpartum depression disorder (TM1)

Pregnancy depression disorder (TM1)

**SD83**

**Uneasiness disorder (TM1)**

A disorder characterized by restlessness, or sadness. It may be explained by emotional factors, postpartum, deficiency of yin blood, long term build up of fire or heat, depletion of the congenital essence, imbalance of yin and yang, or disturbance of qi activity.

**Exclusions:** Depression disorder(TM1)  
Lily disorder(TM1)

**SD84**

**Insomnia disorder (TM1)**

A disorder characterized by unsatisfactory quantity and/or quality of sleep, dizziness or loss of memory. It may be explained by emotional factors, an imbalance of yin and yang or disturbance in thoughts.

**SD85**

**Somnolence disorder (TM1)**

A disorder characterized by excessive, involuntary, and inexplicable sleepiness during the daytime. It may be explained by an accumulation of turbid phlegm in the body or failure of clear yang to move upwards to the head.

**SD86**

**Dementia disorder (TM1)**

A disorder characterized by impairment or loss of intellectual capacity or personality. It may be explained by age related deficiency of qi and blood, blood stasis and a build up of turbid phlegm obstructing brain function, mental disturbance, or brain damage.

**Inclusions:** Aged dementia disorders (TM1)  
**Exclusions:** Amnesia disorder (TM1)

**SD87**

**Repressed fire disorder (TM1)**

A disorder characterized by sensation of heat, stuffiness, dry mouth, anxiety, depression, irritability, headache, dizziness, loss of appetite, or epigastric distension. It may be explained by chronically repressed anger inducing mental and physical symptoms.

**SD8Y**

**Other specified mental and emotional disorders (TM1)**

**SD8Z**

**Mental and emotional disorders (TM1), unspecified**

## External contraction disorders (TM1) (SD90-SE2Z)

This section comprises a range of epidemical infections caused by contact of the respiratory, digestive and dermatology systems with mediators like contaminated air, unclean food and water, rats and bugs.

This section includes a range of bacterial, viral, fungal, protozoan and parasitic infections.

Chief complaints of these disorders begin with symptoms such as aversion to cold, fever and body aches, depending on the infection source and site; more distinguishing symptoms are shown such as high fever, vomiting, diarrhea.

### SD90

#### **Seasonal cold disorder (TM1)**

A disorder characterized by the sudden onset of fever, swollen throat, headache or body pain. It may be explained by infection entering the lung system.

**Exclusions:** Common cold disorder (TM1)

### SD91

#### **Fatigue consumption disorder (TM1)**

A disorder characterized by the presence of cough, productive cough, cyclical fever, night sweating, coughing up blood, seminal emission, diarrhea, chest pain or a sensation of heat in the extremities. It may be explained by excessive mental or physical work, excessive sexual activity or various infections.

**Exclusions:** Flowing phlegm disorder (TM1)

### SD92

#### **Severe vomiting and diarrhoea disorder (TM1)**

A disorder characterized by the sudden onset of intense vomiting and diarrhoea with stool that resembles rice water, sunken eyes, spasm of calf, consumption of fluids and even death due to syncope and prostration. It may be explained by the dysfunction of the spleen system.

**Exclusions:** Diarrhea disorder (TM1)

Cholera

### SD93

#### **Alternating fever and chills disorder (TM1)**

A disorder characterized by alternating episodes of fever and chills with headache that may be relieved after sweating, or mass in the left hypochondrium. It may be explained by the interaction between the pathological exogenous factors and defense qi.

**Exclusions:** Malaria

### SD94

#### **Parasitic disorder (TM1)**

A disorder characterized by excessive gas in the intestinal tract and fluid accumulation in the peritoneal cavity. It may be explained by infection of the body by some external agent.

### SD95

#### **Flowing phlegm disorder (TM1)**

A disorder characterized by the gradual onset of abscess or fistula in the bones or effusion in the joints that heals slowly. It may be congenital or explained by weak bones due to kidney system dysfunction or accumulation of turbid phlegm associated with mycobacterium tuberculosis infection.

**Inclusions:** Bone and joint tuberculosis disorder (TM1)

## Warmth disorders (TM1) (SE00-SE0Z)

A group of communicable disorders characterized by clinical manifestation with significant feature of heat or fire, such as fever, dark urine, red tongue and rapid pulse. It may be explained by external contraction of communicable factors with the feature of fire or heat or summer heat.

### SE00

#### **Summer-heat disorder (TM1)**

A disorder characterized by the sudden onset of fever, headache, vomiting, or stiff neck in the summer, with the potential for coma, seizure or spastic paralysis which may be temporary and is contagious. It may be explained by the environmental factor of fire entering the body, particularly the brain, associated with mosquito bites.

### SE01

#### **Spring warmth disorder (TM1)**

A disorder characterized by the sudden onset of fever, headache, stiff neck, vomiting, discolored spots of the skin, or restlessness in winter or spring, with the potential for coma or delirium and which may be contagious. It may be explained by the environmental factor of fire entering the body, particularly the brain, through respiration.

### SE02

#### **Dampness and warmth disorder (TM1)**

A disorder characterized by persistent fever, epigastric fullness, abdominal distention, a greasy coating on the tongue, bradycardia, lack of facial expression, rose colored rash, psoriasis, mass in the left hypochondrium or decreased levels of leucocytes, and which may be contagious. It may be explained by qi stagnation or the environmental factors of fire or dampness entering the body, through respiration and effecting the middle region of the trunk (historically known as the middle energizer region).

### SE0Y

#### **Other specified warmth disorders (TM1)**

### SE0Z

#### **Warmth disorders (TM1), unspecified**

### SE2Y

#### **Other specified external contraction disorders (TM1)**

### SE2Z

#### **External contraction disorders (TM1), unspecified**

## Childhood and adolescence associated disorders (TM1) (SE30-SE3Z)

This section comprises a range of TM disorders that may occur during infancy, childhood or adolescence. They are associated with delayed growth and development.

### SE30

#### **Developmental delay disorder (TM1)**

A disorder characterized by developmental delay, such as in standing, walking, teething, or speaking. It may be explained by dysfunction of the spleen and kidney systems.

### SE31

#### **Growth fever disorder (TM1)**

A disorder characterized by fever or febrile sensation. It may be explained by the growth and development of the infant.

**SE32**

**Growth pain disorder (TM1)**

A disorder characterized by physiological pain due to the rapid growth and development of the child. It may be explained by rapid growth of the child.

**SE33**

**Acute convulsion disorder (TM1)**

A disorder in an infant or child characterized by acute convulsions, fever, phlegm, pulling pain, trembling, and loss of consciousness. It may be explained by such pathologic factors as exogenously provoked wind, fire, and phlegm.

**SE34**

**Recurrent convulsion disorder (TM1)**

A disorder in an infant or child characterized by recurrent convulsions, pulling pain, trembling, and loss of consciousness that has chronically developed in an infirmly or convalescent individual. It may be explained by such pathologic factors as wind, and phlegm built by dysfunctional spleen and kidney system.

**SE35**

**Fright seizure disorder (TM1)**

A disorder characterized by fright induced seizures that cause vomiting, abdominal pain, and even convulsions. It may be caused by the instability of spirit qi that is not mature enough as of an infant.

**SE36**

**Night crying disorder (TM1)**

A disorder characterized by frequent or prolonged crying at night that is not present during the day. It may be explained by an accumulation of cold factor in the spleen system, fire or heat factors in the heart system or fear.

**SE37**

**Infantile malnutrition disorder (TM1)**

A disorder characterized by emaciation, weakness, and failure to thrive. It may be explained by improper feeding or other diseases, or congenital deficiency, that may cause malfunction of the spleen and stomach systems, consumption of qi and body fluid.

**SE38**

**Dribbling disorder (TM1)**

A disorder characterized by abnormal or excessive salivation. It may be explained by an accumulation of fire or heat in the spleen and stomach systems or dysfunction of the spleen system.

**SE39**

**Diaper dermatitis disorder (TM1)**

A disorder characterized by flushing and discoloured spots of the skin, ulceration and exudation at the hip, perineum, vulva, scrotum and medial side of the thigh. It may be explained by contact with wet diapers.

**SE3A**

**Infant stiffness disorder (TM1)**

A disorder characterized by cold and stiff hands, feet, mouth, nape and/or total skin. It may be explained by inactivity of primordial yang or coagulation of blood due to the cold factor.

**SE3B****Infant limpness disorder (TM1)**

A disorder characterized by flaccidity of head, nape, mouth, hands, feet and muscles. It may be explained by deficient prenatal qi, malnutrition or improper feeding that causes deficiency of qi and blood.

**SE3Y****Other specified childhood and adolescence associated disorders (TM1)****SE3Z****Childhood and adolescence associated disorders (TM1), unspecified****SE5Y****Other specified traditional medicine disorders (TM1)****SE5Z****Traditional medicine disorders (TM1), unspecified****Traditional medicine patterns (TM1) (SE70-SJ1Z)**

A pattern in traditional medicine, pattern (TM1), refers to the complete clinical presentation of the patient at a given moment in time including all findings. Findings may include symptomology or patient constitution, among other things (please refer to chapter definition for further details).

**Principle-based patterns (TM1) (SE70-SE7Z)**

This section is about the most basic doctrine for pattern identification in Traditional Medicine.

Based on the analysis of symptomatology and constitution of a patient, patterns are categorized into eight principles which consist of four groups of opposing characteristics i.e. Yin & Yang, Heat & Cold, Deficiency & Excess and Interior & Exterior (and with the addition of three intermediate patterns). These principles constitute the most basic patterns which may be combined for pattern differentiation in more refined detail.

**SE70****Yang pattern (TM1)**

A pattern with collective characteristics of exterior, heat, and excess patterns with excitatory, hyperfunctional, restless or bright manifestations, outward and upward symptoms. It may be explained by pathogenic factors of a yang nature.

**SE71****Yin pattern (TM1)**

A pattern with collective characteristics of interior, cold, and deficiency patterns with inhibitory, hypofunctional, quiescent, or dimmed manifestations, inward and downward symptoms. It may be explained by pathogenic factors of a yin nature.

**SE72****Heat pattern (TM1)**

A pattern characterized by fever, aversion to heat and preference for cold, thirst, flushed face, irritability and vexation, thick yellow sputum and nasal mucus, short voidings of dark-colored urine, constipation, red tongue with yellow coating, or a rapid pulse. It may be explained by external heat factor, prevalence of yang qi, or by an excess of internal heat production.

**SE73**

**Cold pattern (TM1)**

A pattern characterized by aversion to cold or fear of cold, cold pain with preference for heat, absence of thirst, thin clear sputum and nasal mucus, long voidings of clear urine, loose bowels, white facial complexion, pale tongue with white coating, and a tight or slow pulse. It may be explained either by an external cold factor, by deficient yang within the body, or by an insufficient internal heat production.

**SE74**

**Excess pattern (TM1)**

A pattern characterized by forceful pulse or a robust body with a strong constitution and a strong abdominal wall. It may be explained by strong responses against external pathogenic factors such as, the six excesses, pestilential pathogens, worms and toxins, by accumulated pathological products (due to dysfunction of internal organs), such as phlegm, retained fluid, water, dampness, pus, static blood, and retained food.

**SE75**

**Deficiency pattern (TM1)**

A pattern characterized by fatigue, feeble pulse or a vulnerable body with a weak constitution and a weak abdominal wall. It may be explained by weak response against the pathogenic factors, by deficiency of the healthy qi, including deficiency of yin, yang, qi, and blood.

**SE76**

**Exterior pattern (TM1)**

A pattern characterized by aversion to cold or to wind, fever, headache, body aches, a film coating the tongue or floating pulse. These signs and symptoms are usually seen at the early stage of external contraction related disorders, mainly characterized by sudden onset, superficial location, mild and short-term in nature. It may be explained by pathogenic factors affecting the exterior part of the body such as skin, joints and head and the subsequent reaction against those factors.

**SE77**

**Interior pattern (TM1)**

A pattern characterized by persistent or recurrent abdominal distension, abdominal pain, constipation, diarrhea, or deep pulse which are of deeply located, severe nature or long duration. It may be explained by pathogenic factors entering the deep parts of organs, qi, blood or bone marrow and the subsequent reaction of the body against the pathogens.

**SE78**

**Moderate (Heat/Cold) pattern (TM1)**

A pattern characterized by absence of findings that indicate Heat pattern (TM), such as heat intolerance, red complexion, hot limbs, or Cold pattern (TM), such as cold intolerance, pale complexion, cold limbs. It may be explained by average level of metabolic activity.

**SE79**

**Medium (Excess/Deficiency) pattern (TM1)**

A pattern characterized by [at the onset of febrile condition] chills with or without sweating, floating pulse of intermediate strength, [in case of non-febrile condition] pulse of intermediate strength, abdominal wall of intermediate strength. It may be explained by intermediate response to pathogens.

**SE7A****Tangled cold and heat pattern (TM1)**

A pattern characterized by co-existence of the Cold pattern (TM) and Heat pattern (TM), such as hot flashes at upper body parts with cold sensation and pale color at lower body parts. It may be explained by co-existence of increased and decreased heat production in different parts of the body.

**SE7Y****Other specified principle-based patterns (TM1)****SE7Z****Principle-based patterns (TM1), unspecified****Environmental factor patterns (TM1) (SE80-SE8Z)**

This section comprises patterns with a shared explanation related to environmental factors (i.e. wind, cold, dampness, dryness, fire, summer-heat) and the presence of the pathogens, parasites or toxins.

**SE80****Wind factor pattern (TM1)**

A pattern characterized by fever, aversion to wind, moving pain, stiff tongue, dizziness, blurred vision, pruritus, numbness of the limbs, tremors, convulsions, deviated eye and mouth or hemiplegia. It may be caused by wind factor, ascending reverse flow of liver qi or liver wind within the body.

**SE81****Cold factor pattern (TM1)**

A pattern characterized by aversion to cold or fear of cold, cold pain with preference for heat, absence of thirst, thin clear sputum and nasal mucus, long voidings of clear urine, loose bowels, white facial complexion, pale tongue with white coating, or a tight or slow pulse. It may be caused by external cold factor, deficiency of yang qi or excess of yin cold within the body.

**SE82****Dampness factor pattern (TM1)**

A pattern characterized by fatigue, heavy cumbersome limbs, heavy-headedness, poor appetite, abdominal distention, loose stool, slippery and greasy tongue coating, or a soggy and moderate pulse.

It may be caused by external dampness factor or by dampness produced in the body subsequent to spleen and kidney yang deficiency that leads to decreased fluid transportation and transformation, which then results in water stagnation.

**SE83****Dryness factor pattern (TM1)**

A pattern characterized by dry skin, pruritus, dry nose, dry mouth and throat, dry cough, dry eye or constipation. It may be caused by external dryness factor or by internal dryness resulted from the shortage of body fluid.

**SE84****Fire-heat factor pattern (TM1)**

A pattern characterized by high fever, headache, red eyes, bitter taste in the mouth, dry mouth, or and thirst for cold drinks. It may be caused by heat and fire contracted externally or engendered internally.

**SE85**

**Summer-heat factor pattern (TM1)**

A pattern characterized by high fever with sweating, thirst, shortness of breath, lassitude, cumbersome limbs, short voidings of dark-colored urine, a red tongue, or a rapid and feeble pulse. It may be caused by contraction of external summer-heat.

**SE86**

**Pestilent factor pattern (TM1)**

A pattern with a shared explanation related to the presence of pathogens, parasites, or toxins.

**SE8Y**

**Other specified environmental factor patterns (TM1)**

**SE8Z**

**Environmental factor patterns (TM1), unspecified**

**Body constituents patterns (TM1) (SE90-SF4Z)**

This section comprises a range of dysfunctions of four body constituents, which is qi, blood, fluid and essence. These patterns are grouped together on the basis of their common etiology such as an abnormal flow of qi, blood, or essence or dysfunctional distribution of fluid.

**Qi patterns (TM1) (SE90-SE9Z)**

This section comprises a range of Qi disturbance patterns grouped together on the basis of their having in common a demonstrable etiology in Qi, which means invisible action, function, or working that circulates throughout the body.

**Exclusions:**

Qi phase patterns (TM1)

**SE90**

**Qi deficiency pattern (TM1)**

A pattern characterized by decreased vitality, fatigue, weakness, appetite loss, short breath, no desire to speak, spontaneous sweating, or feeble pulse. It may be explained by decreased or insufficient quantity of qi.

**Inclusions:**

Qi decrease pattern (TM1)

**SE91**

**Qi stagnation pattern (TM1)**

A pattern characterized by a sensation of obstruction in the throat, a sensation of ear tube obstruction, fullness in the chest and hypochondrium or abdominal distension, depressive state or pain. It may be explained by the hindered qi movement.

**SE92**

**Qi uprising pattern (TM1)**

A pattern characterized by coughing, panting, hiccuping, vomiting, and distention of the abdomen. It may be explained by abnormal upward movement of qi.

**SE93**

**Qi sinking pattern (TM1)**

A pattern characterized by shortness of breath, dizziness, tiredness, downward distension of the abdomen, hypogastria, diarrhea, haemorrhoids, and perineum prolapse. It may be explained by failure of qi's function to lift or hold.

**SE94**

**Qi collapse pattern (TM1)**

A pattern characterized by sudden onset of pale tongue and complexion, cyanotic lips, perspiration, cold limbs, dyspnea or thready and rapid pulse. It may be explained by the sudden loss of genuine qi.

**SE9Y**

**Other specified qi patterns (TM1)**

**SE9Z**

**Qi patterns (TM1), unspecified**

**Blood patterns (TM1) (SF00-SF0Z)**

This section comprises a range of patterns related to the dysfunction of blood as a body constituents. Blood patterns (TM) may be explained by malnutrition due to anemia, problems in blood circulation including the obstruction of venous return.

**Exclusions:** Blood phase patterns (TM1)

**SF00**

**Blood deficiency pattern (TM1)**

A pattern characterized by anemia, atrophic dry skin, alopecia, nail deformity, muscle cramp, forgetfulness, pale or sallow complexion, pale lips, tongue and nails, dizziness, dim vision, palpitation, dreaminess, numbness of hands and feet, and in women, scanty, light-colored menstrual blood, irregular menstruation or amenorrhoea, thready pulse, etc. It may be explained by deficient blood which fails to nourish the viscera, meridians and body.

**Inclusions:** Blood decrease patterns (TM1)

**SF01**

**Blood stasis pattern (TM1)**

A pattern characterized by dark complexion, local bluish and purplish lump, pain which is fixed in one place, bleeding with dark blood and dark clots, purple or spotted tongue, purple lips, wiry firm or choppy pulse. It is a common pattern in various menstrual disorders such as amenorrhea, dysmenorrhea, menopausal syndrome; lower abdominal fullness, varicose veins, hemorrhoids, mood swings or sublingual varicosis. It may be explained by problems in blood circulation.

**SF02**

**Blood heat pattern (TM1)**

A pattern characterized by bleeding, including nosebleeds, vomiting of blood, coughing up blood, blood in the stool, skin eruption with bleeding, profuse and bright red menstrual blood, fever, agitation, restlessness, delirium, convulsions, a crimson tongue or rapid wiry pulse. It may be explained by fire or heat entering the blood.

**Exclusions:** Blood cold pattern (TM)

**SF03****Blood cold pattern (TM1)**

A pattern characterized by cold pain of the extremities with dark purple skin or cramps in the lower abdomen which are relieved by warmth and exacerbated by cold, delayed menstruation and dark purple menstrual discharge with blood clots, white tongue coating or sunken, slow and rough pulse. It may be explained by excessive external cold factor induced qi stagnation or cold factor blocking the circulation of qi and blood.

**Exclusions:** Qi patterns (TM1)  
Blood heat pattern (TM1)

**SF04****Blood dryness pattern (TM1)**

A pattern characterized by dry mouth and throat, pain in throat, dry skin, dry and lusterless hair, nasal bleeding, constipation, dizziness, and dry tongue. It may be explained by insufficiency of body yin or heat which is created within the body.

**Exclusions:** Qi patterns (TM1)  
Blood heat pattern (TM1)

**SF0Y****Other specified blood patterns (TM1)****SF0Z****Blood patterns (TM1), unspecified****Fluid patterns (TM1) (SF10-SF1Z)**

This section comprises a range of patterns related to the dysfunction of fluid as a body constituent. Fluid patterns (TM) may be explained by the retention or imbalance of water and dampness inside the body.

**SF10****Fluid deficiency pattern (TM1)**

A pattern characterized by, dry mouth and throat, parched lips, and cracking at the corners of the mouth, dry skin, thirst with desire to drink, scanty urination, dry bowel movements, red dry tongue and thready, rapid, and feeble pulse. It may be explained by insufficient body fluids that fail to moisten and nourish the organs and body tissues.

**Exclusions:** Essence deficiency pattern (TM1)

**SF11****Fluid disturbance pattern (TM1)**

A pattern characterized by thirst, edema, vertigo, headache, spontaneous sweating, vomiting or watery diarrhea. It may be explained by abnormal distribution of body fluids.

**Inclusions:** Fluid retention pattern (TM1)

**SF12****Dry-phlegm pattern (TM1)**

A pattern characterized by scant or blood tinged sputum that is difficult to cough up, chest pain or discomfort, dry mouth, nose and throat, a dry or greasy tongue coating or a thready, astringent and rapid pulse. It may be explained by the accumulation of fire/heat, dryness or turbid phlegm in the lung system.

**SF13****Damp phlegm pattern (TM1)**

A pattern characterized by profuse, thick sputum that is easy to cough up, a sensation of heaviness in the limbs, stuffy chest and epigastrium, poor appetite, stickiness in the mouth, white and greasy tongue coating, soggy and moderate or slippery pulse. It may be explained by a build up of dampness or phlegm in the spleen and lung.

**SF14****Phlegm-fire harassing the heart system pattern (TM1)**

A pattern characterized by restlessness, insomnia or even raving madness, fever, thirst, stuffy chest, yellow phlegm, red tongue tip, yellow greasy tongue coating, and rapid slippery pulse. It may be explained by phlegm-fire that impacts the heart system.

**SF15****Wind-phlegm pattern (TM1)**

A pattern characterized by expectoration of frothy sputum, chest distress, dizziness, distending pain of the head and eyes, throat congestion, numbness of the limbs, loss of consciousness with an inability to speak, facial spasms, white greasy tongue coating, or wiry, slippery pulse. It may be explained by imbalance in the wood element causing excessive wind or turbid phlegm.

**SF1Y****Other specified fluid patterns (TM1)****SF1Z****Fluid patterns (TM1), unspecified****Essence patterns (TM1) (SF20-SF2Z)**

This section comprises a range of Essence dysfunction patterns (TM). They are grouped together based on their common etiology in Essence, which builds up the physical structure and maintains body function, or reproductive essence stored in the kidney system. Essence Patterns (TM) may be explained by the deficiency of the fundamental substance inside the body.

**SF20****Essence deficiency pattern (TM1)**

A pattern characterized by a range of symptoms including underweight, lethargy, dizziness, hypermicrosoma, slow response. It may be explained by the lack of nourishment of the vital organs.

**SF2Y****Other specified essence patterns (TM1)****SF2Z****Essence patterns (TM1), unspecified****SF4Y****Other specified body constituents patterns (TM1)****SF4Z****Body constituents patterns (TM1), unspecified**

## Organ system patterns (TM1) (SF50-SG1Z)

### Liver system patterns (TM1) (SF50-SF5Z)

This section contains a series of TM patterns that are all attributable to dysfunction of Liver system. The system consists of the liver, gallbladder, tendon, nails, eyes, related meridians and collaterals.

#### **SF50**

#### **Liver yin deficiency pattern (TM1)**

A pattern characterized by mild dizziness, dim vision, dry eyes, blurred vision, flushed cheeks, burning pain of hypochondrium, irritation with a sensation of heat in the palms, soles and the chest, red tongue with less or peeling coating, or a thready, rapid pulse. It may be explained by deficient yin fluid of the liver required to cool and nourish the tissues associated with the liver system and produces deficiency heat.

#### **SF51**

#### **Liver yang deficiency pattern (TM1)**

A pattern characterized by distension and oppression in the hypochondriac regions, dizziness, blurred vision, depression and susceptibility to fright, fear of cold with cold limbs, pale tongue with white coating and deep, slow, feeble pulse. It may be explained by insufficient yang qi with diminished function of the organ in the liver system, and produces deficiency cold.

#### **SF52**

#### **Liver yang ascendant hyperactivity pattern (TM1)**

A pattern characterized by dizziness, ringing in the ears, distending pain of the head and eyes, heaviness of the head, reddish complexion and eyes, agitation, irritability, insomnia, dream disturbed sleep, aching and weakness of the waist and knees, bitter taste, red tongue, or wiry pulse. It may be explained by deficient liver-kidney yin that lets liver yang get out of control with exaggerated movement that stirs upwards and affects the head.

#### **SF53**

#### **Liver qi deficiency pattern (TM1)**

A pattern characterized by blurred vision, a sensation of fullness in the hypochondrium, emotional upset, a feeling of fear, bluish complexion, dizziness, short breath, fatigue, dull nails, pale tongue and weak pulse. It may be explained by deficiency of qi resulting in impaired function of the liver system.

#### **SF54**

#### **Liver blood deficiency pattern (TM1)**

A pattern characterized by mild dizziness, dim or blurred vision, night blindness, numbness of the limbs, scant light-colored menstruation or amenorrhea, pale complexion, nail beds and tongue, or a thready pulse. It may be explained by depletion of blood in the liver organ, or other condition that causes a lack of normal blood in the body and failure to nourish the liver and tissues associated with the liver system.

#### **SF55**

#### **Liver depression and blood stasis pattern (TM1)**

A pattern characterized by depression, distending or sharp pain or formation of a fixed mass in the hypochondrium region or pelvis, purple tongue or purple spots on the tongue or a wiry, astringent pulse. It may be explained by liver qi stagnation causing blood stasis in the liver system.

**SF56**

**Liver wind stirring the interior pattern (TM1)**

A pattern characterized by convulsions of the limbs, dizziness, and trembling. It may be explained by dysfunction of the liver system associated with wind-yang, fire-heat, yin deficiency or blood deficiency.

**SF57**

**Liver qi stagnation pattern (TM1)**

A pattern characterized by distending and burning pain of the hypochondrium, along with restlessness, irritability, bitter taste, dry mouth, red tongue with yellow coating or a wiry rapid pulse. It may be explained by long-term stagnation of liver system qi induced internal fire factor that affects tissues and functions associated with the liver system.

**SF58**

**Liver fire flaming upward pattern (TM1)**

A pattern characterized by fever, thirst, headache, dizziness, restlessness, insomnia, reddish painful and swollen eyes, sudden tinnitus, or sudden deafness, or bright-red blood from the upper body (nose or mouth, through coughing, or vomiting), irritability, bitter taste, reddish complexion, red tongue with yellow coating, rapid wiry pulse. It may be explained by hyperactivity of excess liver fire flaming upward to the head or the tissues associated with the liver system.

**SF59**

**Liver heat stirring wind pattern (TM1)**

A pattern characterized by high fever, thirst, coma and delirium, spasms of the limbs, opisthotonos, red tongue with yellow coating or rapid pulse. It may be explained by excess heat that generates internal wind.

**SF5A**

**Liver-gallbladder dampness-heat pattern (TM1)**

A pattern characterized by fever, yellowish discoloration of the skin and eyes, hypochondrium and abdominal pain, or a lump in the hypochondrium, bitter taste in the mouth, anorexia, vomiting, nausea, dislike of greasiness, yellow urine, red tongue with yellow and greasy coating and a slippery-rapid pulse. It may be explained by accumulation of dampness-heat in the liver and gallbladder systems resulting in impaired bile flow, and downward pouring of dampness-heat.

**SF5B**

**Liver meridian dampness-heat pattern (TM1)**

A pattern characterized by distending pain of the hypochondrium, or moist, itching and painful swollen genitalia, or distending pain and suppuration of the ear, red tongue with yellow greasy coating and rapid slippery pulse. It may be explained by dampness and heat invading the liver meridian.

**SF5C**

**Liver meridian cold stagnation pattern (TM1)**

A pattern characterized by cold-natured pain of the lower abdomen or contracting pain of the exterior genitalia, or parietal headache that are aggravated by cold and relieved by warmth, aversion to cold, cold limbs, vomiting of saliva or vomiting clear mucus, white tongue coating, or a wiry, tight pulse. It may be explained by the invasion of the external cold factor that stagnates in the liver meridian.

**SF5D**

**Gallbladder qi deficiency pattern (TM1)**

A pattern characterized by a tendency toward panic, suspicion, low spirits, easy to cry due to sadness, lethargy, dreaminess and insomnia, pale tongue and weak pulse. It may be explained by deficiency of gallbladder system qi that makes the heart spirit disquiet and susceptible to fright.

**SF5E**

**Gallbladder depression with phlegm harassment pattern (TM1)**

A pattern characterized by restlessness, timidity, dreaminess and insomnia, oppression and distension in the chest and hypochondriac region, frequent sighing, dizziness, bitter taste in the mouth, excessive phlegm, nausea, vomiting, greasy tongue coating or wiry pulse. It may be explained by disturbance of turbid phlegm that leads to gallbladder system stagnation and the failure to diffuse qi.

**SF5F**

**Gallbladder heat pattern (TM1)**

A pattern characterized by irritability, anger, hypochondriac distension, bitter taste in the mouth, or ear pain, tinnitus, insomnia, or red tongue with yellow coating and slippery-rapid pulse. It may be explained by excess heat invading the gallbladder system and in particular its meridian.

**SF5G**

**Gallbladder cold pattern (TM1)**

A pattern characterized by aversion to cold, cold limbs, muscular weakness, hypochondriac pain, vomiting of clear fluid, impaired digestion, dizziness, lethargy, timidity or insomnia, pale tongue and slow pulse. It may be explained by gallbladder qi deficiency causing dysfunction in the liver and gallbladder system.

**SF5H**

**Liver and kidney yin deficiency pattern (TM1)**

A pattern characterized by mild dizziness, blurred vision, ringing in the ears, forgetfulness, insomnia and dream-disturbed sleep, hypochondriac pain, aching soreness in lower back and legs, decreased muscle tone in the legs, flushed cheeks, heat sensation in the chest, palms and soles, night sweats, nocturnal emission in men, scant menstruation in women, red tongue with less or peeling coating or a rapid thready pulse. It may be explained by inadequate of yin fluids in the liver and the kidney systems causing deficiency fire symptoms.

**SF5J**

**Disharmony of liver and spleen systems pattern (TM1)**

A pattern characterized by pain and/or distension of hypochondrium, abdominal distension, reduced appetite, depression, irregular bowel movement, abdominal pain relieved after defecation, or a wiry and slow pulse. It may be explained by depressed liver qi that impairs the functions of the spleen system.

**SF5K**

**Disharmony of liver and stomach systems pattern (TM1)**

A pattern characterized by distension, fullness and pain of the epigastrium and hypochondrium, belching, nausea, hiccup, vomiting, acid regurgitation, depression, reduced appetite, and wiry pulse. It may be explained by stagnation of liver system qi that flows upwards to invade the stomach system, disturbing stomach system qi to descend normally and leading to the presence of stomach system symptoms.

**SF5L****Liver fire invading the stomach system pattern (TM1)**

A pattern characterized by a burning sensation and pain in the stomach, epigastrium and hypochondrium, bitter taste, dry mouth, vomiting of bitter liquid, constipation, yellow urine, red tongue with yellow coating or a wiry, rapid pulse. It may be explained by excess liver fire that invades the stomach system, impacting stomach system qi to descend normally and cause digestive dysfunction.

**SF5M****Liver fire invading the lung system pattern (TM1)**

A pattern characterized by dry cough or cough with thick sputum or blood, burning pain in the chest and hypochondrium, bitter taste, irritability, red tongue and rapid wiry pulse. It may be explained by excess liver fire that moves upwards to invade the lung system.

**SF5Y****Other specified liver system patterns (TM1)****SF5Z****Liver system patterns (TM1), unspecified****Heart system patterns (TM1) (SF60-SF6Z)**

This section contains a series of TM patterns that are all attributable to dysfunction of Heart system. The system consists of the heart and small intestine organs, vessels, tongue and related meridians and collaterals.

**SF60****Heart qi deficiency pattern (TM1)**

A pattern characterized by palpitations, shortness of breath, listlessness, spontaneous sweating, pallor, pale tongue, and feeble or irregular pulse. It may be explained by deficiency of heart system qi and heart spirit.

**SF61****Heart blood deficiency pattern (TM1)**

A pattern characterized by palpitations, dizziness, dream-disturbed sleep, forgetfulness, pale or sallow complexion, pale lips and tongue, or a feeble thready pulse. It may be explained by a state such as anemia, deficiency of blood leading to malnourishment of the heart and heart spirit.

**SF62****Dual deficiency of heart qi and blood pattern (TM1)**

A pattern characterized by palpitations, shortness of breath, listlessness, fatigue, dizziness, forgetfulness, dream-disturbed sleep, pale complexion and tongue, and feeble pulse. It may be explained by deficiency of both qi and blood depriving the heart and heart spirit.

**SF63****Heart meridian obstruction pattern (TM1)**

A pattern characterized by episodes of palpitations with fearful throbbing, pain and a feeling of pressure in the heart and chest radiating to the shoulder or upper arm. It may be explained by the heart meridian being impeded.

**SF64****Heart yin deficiency pattern (TM1)**

A pattern characterized by mental irritability, palpitation, insomnia, low fever, night sweating, redness and warmth in the cheeks, thirst, agitation, dizziness, forgetfulness, a red tongue with coating or a thready, rapid pulse. It may be explained by deficiency of yin fluid to nourish the heart and heart spirit.

**SF65**

**Deficiency of heart qi and yin pattern (TM1)**

A pattern characterized by palpitation, short breath, lassitude, dizziness, insomnia, dreaminess, flushed cheeks, red tongue with scanty coating, rapid or feeble pulse. It can also be seen as combined manifestations of deficient heart system qi and yin. It may be explained by deficiency of both qi and yin that leads to failure of the heart and heart spirit to be nourished.

**SF66**

**Heart yang deficiency pattern (TM1)**

A pattern characterized by palpitations, shortness of breath, a feeling of pressure in the chest, asthma, aversion to cold, cold limbs, bright pale complexion, dark lips and purple tongue with white coating, feeble or irregular pulse. It may be explained by deficiency of yang to warm and activate the heart and body.

**SF67**

**Heart yang collapse pattern (TM1)**

A pattern characterized by sudden profuse sweating, cold skin, coldness of the limbs, feeble breathing, palpitations, clouding or loss of consciousness, pale complexion or a hardly perceptible pulse. It may be explained by extreme deficiency of heart yang.

**SF68**

**Heart fire flaming upward pattern (TM1)**

A pattern characterized by oral ulceration, mental irritability, insomnia, and a red tip of the tongue, as well as fever, thirst, agitation, and rapid pulse. It may be explained by up-flaring fire from the heart system or hyperactivity of fire in the heart meridian which surges upwards.

**SF69**

**Fire harassing heart spirit pattern (TM1)**

A pattern characterized by palpitations, agitation, insomnia, increase dreams during sleep, delirium, fever, thirst, reddish complexion, red tongue with yellow coating, slippery and rapid pulse. It may be explained by excess heat that disturbs heart spirit.

**SF6A**

**Water qi intimidating the heart system pattern (TM1)**

A pattern characterized by palpitations, shortness of breath, generalized swelling, especially in the legs, scanty clear urine, listlessness, lethargy, cold extremities, pale or dark gloomy complexion, pale larger tongue with white slippery coating and deep feeble pulse. It may be explained by deficiency of yang qi in the heart and kidney systems that leads to water flooding.

**SF6B**

**Heart spirit restlessness pattern (TM1)**

A pattern characterized by palpitation, agitation, insomnia, increased dreams during sleep. It may be explained by disturbance of the heart spirit associated with emotional and disease states.

**SF6C**

**Anxiety damaging the spirit pattern (TM1)**

A pattern characterized by depressed emotion, apathy, insomnia, dreaminess, dizziness, lassitude, loss of appetite and wiry pulse. It may be explained by excessive anxiety which impairs the spirit.

**SF6D**

**Small intestine qi stagnation pattern (TM1)**

A pattern characterized by gripping pain of lower abdomen, tympanites and borborygmus, in some cases of male, accompanied with tumidity on one side of scrotum. It may be explained by qi stagnation in the small intestine system, stagnation of the seven emotions or stagnation and binding of yin cold.

**SF6E**

**Small intestine excess heat pattern (TM1)**

A pattern characterized by mental restlessness, oral ulcers, heat sensation in the chest, abdominal pain, thirst with desire for cold beverages, scanty dark urine, bloody urine or a red tongue tip with a yellow coating and a rapid pulse. It may be explained by excess heat attributing to the shift of heart fire to the small intestine system.

**SF6F**

**Small intestine deficiency cold pattern (TM1)**

A pattern characterized by undigested food in stool, abdominal dull pain that could be alleviated by warmth and pressure, desire for hot beverages, reversal cold of the extremities, inhibited urination, loose stool, pale tongue with white and slippery coating, deep feeble slow pulse. It may be explained by impairment of the small intestine system associated with deficient yang qi causing endogenous cold factor, affecting the small intestine system's separating function of the clear and turbid fluids.

**SF6G**

**Heart and liver blood deficiency pattern (TM1)**

A pattern characterized by insomnia, palpitations, forgetfulness, scanty menses, pale complexion, brittle nails and hair, dim vision, visual floaters, pale tongue and thready pulse. It may be explained by deficiency of heart blood and liver blood causing the lack of nourishment of the brain, head, eyes, tendons and nails, associated with conditions such as anemia or sequelae of blood loss that affect the normal function of the blood and heart and liver systems.

**SF6H**

**Heart and gallbladder qi deficiency pattern (TM1)**

A pattern characterized by palpitations, insomnia, timidity, dizziness, chest distress, pale tongue. It may be explained by deficiency of heart system qi that leads to restlessness of gallbladder system qi.

**SF6J**

**Heart and spleen systems deficiency pattern (TM1)**

A pattern characterized by palpitations, forgetfulness, insomnia or disturbed sleep, loss of appetite, abdominal distention, loose stool, lethargy, sallow face, pale, tender, flaccid tongue and feeble pulse. It may be explained by qi and blood deficiency of heart and spleen systems affecting the normal function of the heart and spleen.

**SF6K**

**Heart and lung qi deficiency pattern (TM1)**

A pattern characterized by palpitations, a sensation of pressure in the chest, cough, shortness of breath aggravated by exertion, thin expectoration, dizziness, listlessness and lack of strength, feeble voice, spontaneous sweating, pale tongue and feeble pulse. It may be explained by deficiency of qi in the heart and lung systems, affecting their normal functions.

**SF6L**

**Heart and kidney systems disharmony pattern (TM1)**

A pattern characterized by palpitations, agitation, insomnia, ringing in the ears, dizziness, aching and weakness of back and knees, spermatorrhea, constipation, yellow urine, red tongue with peeling coating and a thready or rapid pulse. It may be explained by disturbance of the relationship between the heart and kidney systems that is attributed to deficiency of kidney yin and stirring of heart fire.

**SF6M**

**Heart and kidney yang deficiency pattern (TM1)**

A pattern characterized by palpitations, aversion to cold, cold extremities, inhibited urination, swelling of the legs, pain and cold in the lumbar region and knees, white greasy tongue coating and a feeble deep pulse. It may be explained by deficient yang qi that fails to warm and activate both the heart and kidney systems.

**SF6Y**

**Other specified heart system patterns (TM1)**

**SF6Z**

**Heart system patterns (TM1), unspecified**

**Spleen system patterns (TM1) (SF70-SF7Z)**

This section contains a series of TM patterns that are all attributable to dysfunction of spleen system. The system consists of the spleen and stomach organs, muscles, lips, mouth, flesh, intellect, related meridians and collaterals.

**SF70**

**Spleen qi deficiency pattern (TM1)**

A pattern characterized by reduced appetite, abdominal distension, loose stool, lethargy, lassitude of limbs, a tongue that may be swollen or toothmarked, and a weak or soggy pulse. It may be explained by a deficiency of spleen system qi associated with poor digestion, decreased blood production and circulation, and an inability to regulate the water level in the body.

**SF71**

**Spleen qi sinking pattern (TM1)**

A pattern characterized by a bearing-down sensation in the epigastrium and abdomen, frequent loose stools with a sensation of incomplete defecation, even prolapse of the rectum or other internal organs. It may be explained by deficiency of spleen system qi, which can be caused by heavy lifting, affecting the holding function.

**SF72**

**Spleen deficiency with qi stagnation pattern (TM1)**

A pattern characterized by reduced appetite, distending pain of abdomen, frequent loose stool with sensation of incomplete defecation, increased bowel sounds, flatus, lethargy, decreased movements, wiry pulse. It may be explained by deficiency of spleen system qi that leads to stagnation of qi.

**SF73**

**Spleen deficiency with food retention pattern (TM1)**

A pattern characterized by a gradual reduction of appetite, abdominal distension, frequent diarrhea, distending pain in the epigastrium and abdomen associated with irregular diet, belching with foul odor, acid regurgitation, inhibited diarrhea or a pale tongue with greasy coating. It may be explained by the deficiency of spleen system qi to digest and transport that leads to food retention and putrefaction in the stomach and intestine.

**SF74**

**Spleen failing to control the blood pattern (TM1)**

A pattern characterized chronic bleeding such as red or purple discolored spots of the skin, flooding or spotting in women, sallow complexion, lethargy, lack of strength, and feeble pulse. It may be explained by deficiency of spleen system qi affecting the function of controlling and holding blood.

**SF75**

**Spleen deficiency and blood depletion pattern (TM1)**

A pattern characterized by reduced appetite, abdominal distension, dizziness, lethargy, delayed or absence of menstrual cycle, scanty menstruation, pale complexion, pale tongue, thready and feeble pulse. It may be explained by deficiency and weakness of spleen system qi, reducing the blood production function of the spleen system.

**SF76**

**Spleen yin deficiency pattern (TM1)**

A pattern characterized by hunger with an inability to eat, emaciation, lethargy, constipation, scanty saliva, dry lips, low grade fever, pale or normal colour tongue (or red colour, indicating empty heat) with peeling coating and horizontal cracks, or a thready and rapid pulse. It may be explained by deficiency of yin in the spleen system which impairs the function of fluid transportation and digestion.

**SF77**

**Spleen yang deficiency pattern (TM1)**

A pattern characterized by cold limbs, pain and cold sensation in the abdomen, anorexia, abdominal fullness, swelling, oedema (failure to transform fluids), chronic (watery) diarrhea or with undigested foods, lethargy and emaciation. It may be explained by spleen deficiency cold, deficient yang qi failing to warm and activate the spleen system, and may be in conjunction with failure of the triple burner.

**SF78**

**Dampness-heat encumbering the spleen system pattern (TM1)**

A pattern characterized by abdominal distension, vomiting, nausea, loss of appetite, heaviness of limbs, loose, sticky stool with a sensation of incomplete defecation, dark urine, yellow discoloration of the face and eyes, dull fever not relieved after sweating, thirst, red tongue with yellow and greasy coating, soggy and rapid pulse. It may be explained by the accumulation of dampness and heat.

**SF79**

**Spleen deficiency with dampness accumulation pattern (TM1)**

A pattern characterized by reduced appetite, loss of taste, abdominal distension, loose stool, heavy sensation of the body or with mild edema, pale larger tongue with white moist or greasy coating, soggy and moderate pulse. It may be explained by deficiency of spleen system qi, caused by poor diet, irregular eating or overthinking at meal time, and that leads to the interior retention of turbidity and dampness.

**SF7A**

**Spleen deficiency with water flooding pattern (TM1)**

A pattern characterized by reduced appetite, abdominal distension, loose stool, swelling of face and limbs, fluid accumulation in the peritoneal cavity, lethargy, decreased movement, pale complexion, pale, larger tongue with white and greasy coating, and soggy or feeble pulse. It may be explained by deficiency of spleen system qi affecting the function of the spleen system in transporting and transforming fluid, resulting in the internal retention of body fluid.

**SF7B**

**Cold-dampness encumbering the spleen system pattern (TM1)**

A pattern characterized by epigastric and abdominal distention, stickiness in the mouth, lack of taste, nausea, loose bowels, heavy sensation of the head and body, or dull yellow discoloration of skin and eyes, pale larger tongue with white slimy coat and soggy moderate pulse. It may be explained by accumulation of cold and dampness factors affecting the function of the spleen system.

**SF7C**

**Stomach qi deficiency pattern (TM1)**

A pattern characterized by decreased appetite and impaired digestion. It may be explained by deficiency of stomach system qi, affecting its function.

**SF7D**

**Stomach qi uprising pattern (TM1)**

A pattern characterized by belching, hiccups, acid regurgitation and vomiting. It may be explained by cold, heat, qi, damp or blood or food stagnation in the stomach preventing the downward flow of stomach qi.

**SF7E**

**Stomach yin deficiency pattern (TM1)**

A pattern characterized by dry mouth and throat, sensations of hunger or reduced appetite, dry vomiting, hiccup, constipation, normal tongue colour or slightly red, with little or patchy coating, with scanty fluid, thready pulse. It may be explained by deficiency of stomach yin.

**Inclusions:** Stomach deficiency and heat pattern (TM1)

**SF7F**

**Stomach heat pattern (TM1)**

A pattern characterized by acid reflux, burning pain of the stomach and epigastrium, swift digestion with increased hunger, foul mouth odor, constipation, gum swelling and bleeding, vomiting after eating, red tongue with thick and greasy coating, surging pulse or slippery and rapid pulse. It may be explained by impairment of the stomach system by heat or excessive intake of hot pungent food.

**SF7G**

**Dampness in the intestines pattern (TM1)**

A pattern characterized by vague pain and distension of the abdomen, soggy stool or diarrhea, or sticky fishy stool, white and greasy tongue coating, soggy and moderate pulse. It may be explained by accumulation of dampness in the intestine system that leads to abnormal transportation and transformation of fluid.

**SF7H**

**Cold invading the stomach system pattern (TM1)**

A pattern characterized by sharp cold pain of the stomach and epigastrium with a preference for warmth, vomiting of clear fluid, aversion to cold, cold limbs, white tongue coating, wiry pulse. It may be explained by the invasion of external cold factor into the stomach system and epigastrium that prevents the stomach system qi from descending normally.

**SF7J**

**Intestine cold stagnation pattern (TM1)**

A pattern characterized by sharp, cold pain of the abdomen, clear thin diarrhea, aversion to cold, cold limbs, white tongue coating, wiry and tight pulse. It may be explained by the invasion of the cold factor into the intestine system affecting its function of transportation and transformation.

**SF7K****Anxiety damaging the spleen system pattern (TM1)**

A pattern characterized by dull expression, loss of appetite, distension of the chest, hypochondrium, epigastrium and abdomen, sighing, inhibited discharge of loose stool, and a tight pulse. It may be explained by anxiety that impacts liver qi movement and impairs the transportation and transformation functions of the spleen system.

**SF7L****Lung and spleen deficiency pattern (TM1)**

A pattern characterized by hoarseness, coughing, shortness of breath or difficulty in breathing, pale complexion, clear, thin sputum, decreased appetite, abdominal distension, loose stool, pale tongue with white and greasy coating, or feeble pulse. It may be explained by qi deficiency in both the spleen and the lung systems.

**SF7M****Spleen and kidney yang deficiency pattern (TM1)**

A pattern characterized by pale complexion, aversion to cold with cold limbs, cold and pain in the lower abdomen, chronic diarrhea, edema, inhibited urination, or pale, larger tongue. It may be explained by deficiency of kidney or spleen yang qi.

**SF7Y****Other specified spleen system patterns (TM1)****SF7Z****Spleen system patterns (TM1), unspecified****Lung system patterns (TM1) (SF80-SF8Z)**

This section contains a series of TM patterns that are all attributable to dysfunction of the lung system. The system consists of the lung and large intestine organs, skin, body hair, nose, related meridians and collaterals.

**SF80****Lung qi deficiency pattern (TM1)**

A pattern characterized by weak coughing, shallow breath, short heavy breathing upon exertion, diluted sputum, spontaneous sweating, aversion to wind, pale complexion, feeble voice, a pale tongue or a feeble pulse. It may be explained by diminished lung system function associated with deficiency of lung system qi.

**SF81****Lung yin deficiency pattern (TM1)**

A pattern characterized by a dry cough with sticky sputum that is difficult to expectorate, dry mouth and throat, hoarseness, cyclical fever, flushed cheeks, night sweats, or red tongue with scanty fluid, thready and rapid pulse. It may be explained by lung yin deficiency with endogenous heat.

**SF82****Lung and kidney yin deficiency pattern (TM1)**

A pattern characterized by coughing with scanty expectoration, dryness of the mouth and throat or hoarseness of voice, pain in the lumbar region and limp legs, cyclical fever with sensation of internal origin, flushed cheeks, night sweats, nocturnal emission in men and menstrual irregularities in women, red tongue with peeling coating and rapid feeble pulse. It may be explained by deficiency of yin fluid of the lung and kidney systems with harassment of endogenous heat.

**SF83**

**Lung qi and yin deficiency pattern (TM1)**

A pattern characterized by hoarseness, weak, dry cough, shortness of breath or difficulty in breathing, irritation with a sensation of heat in the palms, soles and the heart or a thready and feeble pulse. It may be explained by deficiency of qi and yin of lung.

**SF84**

**Lung yang deficiency pattern (TM1)**

A pattern characterized by cough, shortness of breath, thin expectoration, fear of cold and cold extremities, spontaneous sweating, pale complexion, larger tongue with white slippery coating and feeble pulse. It may be explained by deficiency of yang qi leading to an unwarming of the lung system.

**SF85**

**Cold phlegm obstructing the lung pattern (TM1)**

A pattern characterized by coughing with profuse phlegm, expectoration and pressure in the chest, or phlegmatic wheezing, aversion to cold and cold limbs, pale tongue with white greasy or slippery coating, and wiry slippery pulse. It may be explained by the cold and phlegm factors stagnating in the lung affecting the lung system function.

**SF86**

**Turbid phlegm accumulation in the lung pattern (TM1)**

A pattern characterized by chest distress, coughing and asthma, expectoration of profuse whitish sputum, white greasy tongue coating, wiry and slippery pulse. It may be explained by the accumulation of dampness phlegm that obstructs lung system qi.

**SF87**

**Exterior cold with lung heat pattern (TM1)**

A pattern characterized by aversion to cold with fever, thirst, decrease or lack of sweat production, restlessness, coughing and asthma, chest distress, yellow and white tongue coating, floating and rapid pulse. It may be explained by the affection of external cold factor that leads to interior stagnation of lung heat.

**SF88**

**Intense congestion of lung heat pattern (TM1)**

A pattern characterized by fever, thirst, cough, rough and heavy breathing, or chest pain, sore throat, nostril flaring, breath with hot sensation, constipation, yellow urine, red tongue with yellow coating, and rapid pulse. It may be explained by excess fire and heat that accumulate in the lung system.

**SF89**

**Phlegm heat obstructing the lung pattern (TM1)**

A pattern marked by cough, shortness of breath, expectoration of thick, yellow or blood-stained sputum, chest pain, red tongue with yellow greasy coating and rapid slippery pulse. It may be explained by the heat and phlegm factors accumulating in the lung and affecting the lung system function.

**SF8A**

**Wind-heat invading the lung pattern (TM1)**

A pattern characterized by cough with expectoration of sticky yellow sputum, stuffy nose with yellow and turbid discharge, fever, dry mouth, sore throat, a red tongue with thin yellow coating, and rapid floating pulse. It may be explained by wind and heat invading the lung system and affecting its function.

**SF8B**

**Lung heat transmitting into the intestine pattern (TM1)**

A pattern characterized by fever, thirst, coughing, asthma, abdominal distension, constipation, red tongue with yellow coating, rapid or excessive pulse. It may be explained by accumulation of excess lung heat, that leads to intestinal heat, affecting the transport function of the intestine system.

**SF8C**

**Wind-cold fettering the lung pattern (TM1)**

A pattern characterized by cough with white watery sputum, fever with mild chills, stuffy nose with clear nasal discharge, itchy throat, oppression in the chest, white tongue coating and floating tight pulse. It may be explained by an attack of the wind and cold factors which impairs the normal flow of lung system qi.

**SF8D**

**Dryness invading the lung pattern (TM1)**

A pattern characterized by dry cough without sputum or with scanty, sticky sputum difficult to expectorate, chest pain, mild chills and fever, thirst, dry lips, mouth, throat and nose, dry tongue with thin coating, or thready rapid pulse. It may be explained by dryness invading the lung system leading to deficiency of fluid and affecting the lung system function.

**SF8E**

**Lung dryness with intestinal obstruction pattern (TM1)**

A pattern characterized by coughing, thirst, dyspnea, constipation, distension, fullness and pain in the abdomen, dry yellow tongue coating, deep and forceful pulse. It may be explained by dryness that leads to fluid consumption and obstruction of hollow organ qi in the intestine system.

**SF8F**

**Large intestine excess heat pattern (TM1)**

A pattern characterized by constipation or dry stool with difficulty in defecation, abdominal distension and tenderness on palpation, hematochezia, deep-colored urine, yellow and dry tongue coating, or rapide strong pulse. It may be explained by excess heat factor obstructing the bowel qi.

**SF8G**

**Large intestine dampness heat pattern (TM1)**

A pattern characterized by abdominal distention and pain, profuse diarrhea which may be malodorous or bloody, painful straining during bowel movement, a burning sensation in the anus, fever, thirst, decreased urine output, brownish urine, a greasy, yellow tongue coating, or a slippery, rapid pulse. It may be explained by an accumulation of the environmental factors of dampness and fire in the large intestine system or impaired qi movement.

**SF8H**

**Large intestine fluid deficiency pattern (TM1)**

A pattern characterized by constipation or difficulty in defecation accompanied by dry throat and red tongue with scanty saliva and yellow dry coating, and thready rough pulse. It may be explained by yin deficiency affecting intestinal system function.

**SF8J****Large intestine deficiency cold pattern (TM1)**

A pattern characterized by abnormal bowel evacuations, abdominal dull pain, aversion to heat and pressure, diarrhea, coldness of limbs, increased bowel sounds, inhibited defecation, pale tongue with a thin white watery coating or a deep, slow pulse. It may be explained by yang qi deficiency in the large intestine system leading to cold.

**SF8Y****Other specified lung system patterns (TM1)****SF8Z****Lung system patterns (TM1), unspecified****Kidney system patterns (TM1) (SF90-SF9Z)**

This section contains a series of TM patterns that are all attributable to dysfunction of Kidney system. The system consists of the kidney and bladder organs, bones, hair, ears, genitalia, anus, related meridians and collaterals.

**SF90****Kidney qi deficiency pattern (TM1)**

A pattern characterized by dizziness, forgetfulness, nocturia, shortness of breath, ringing in the ears, low back pain, decreased sex drive, lower abdominal numbness or a feeble pulse. It may be explained by a decrease in the levels of kidney qi.

**Inclusions:** Kidney qi depletion pattern (TM1)

**SF91****Kidney failing to receive qi pattern (TM1)**

A pattern characterized by shortness of breath with prolonged exhalation, difficulty breathing inward, asthenic cough or panting/dyspnea may be aggravated by exertion, and feeble voice. It may be explained by decreased function of the kidney in holding qi.

**SF92****Kidney qi deficiency with water retention pattern (TM1)**

A pattern characterized by swelling more severe in lower limbs, decreased urine output, aching and weakness of the back and knees, pale larger tongue with white and greasy coating or a feeble pulse. It may be explained by deficiency of kidney system qi that affects the kidney system function of transforming qi and fluid metabolism leading to water retention and flooding.

**SF93****Kidney yin deficiency pattern (TM1)**

A pattern characterized by soreness and weakness of waist and knees, insomnia, dizziness, ringing in the ears, nocturnal emission in men and infrequent or light menstruation in women, emaciation, dry throat, thirst, flushed cheeks, dysphoria with feverish sensation in the palms, soles and the chest, afternoon fever, night sweating, red tongue with scanty coating and a rapid feeble pulse. It may be explained by deficiency of kidney yin that leads to interior disturbance of fire originated from yin deficiency.

**SF94****Kidney yin and yang deficiency pattern (TM1)**

A pattern characterized by vertigo, tinnitus, soreness and weakness of waist and knees, dysphoria with feverish sensation in the palms, soles and the chest, night sweats, nocturnal emissions, cold extremities, and spontaneous sweating. It may be explained by decreased overall kidney functions.

**SF95**

**Kidney deficiency with marrow depletion pattern (TM1)**

A pattern characterized by delayed growth, long term disunion of a bone fracture, painful lumbar region, soft bones, dizziness, ringing in the ears, forgetfulness, dementia. It may be explained by deficiency of kidney essence that leads to deficiency of marrow.

**SF96**

**Kidney essence deficiency pattern (TM1)**

A pattern characterized by growth retardation in children; in adults, premature senility, decreased reproductive function, tinnitus, loosening of teeth, loss of hair and forgetfulness. It may be explained by deficiency of kidney essence necessary for development.

**SF97**

**Kidney yang deficiency pattern (TM1)**

A pattern characterized by aversion to cold, cold limbs, listlessness, weakness and soreness in the waist and knees, decreased sex drive and sexual function, nocturia, white tongue coating and feeble pulse at cubit (chi) section. It may be explained by decreased kidney yang function that fails to warm the body.

**Inclusions:**

Life-gate fire depletion pattern (TM1)

Primordial yang deficiency pattern (TM1)

**SF98**

**Fear damaging the kidney system pattern (TM1)**

A pattern characterized by panic, impotence, spermatorrhea, urinary or fecal incontinence. It may be explained by great terror and fear that impair kidney system qi or by a somatization of an emotional state.

**SF99**

**Blood and heat accumulation in the uterus pattern (TM1)**

A pattern characterized by a burning sensation and pain in the lower abdomen, advanced profuse menstruation in bright red color, or thick yellowish vaginal discharge with foul smell, red tongue with yellow coating and a rapid pulse. It may be explained by accumulation of heat in the uterus.

**SF9A**

**Phlegm obstructing the uterus pattern (TM1)**

A pattern characterized by profuse white vaginal discharge, or lack of menstruation, or infertility, obesity, decreased movement, pale tongue with white and greasy coating, slippery or soggy and slow pulse. It may be explained by phlegm stasis in the uterus, obstructing blood or qi flow.

**SF9B**

**Dampness-heat in the uterus pattern (TM1)**

A pattern characterized by profuse thick and yellowish vaginal discharge with foul smell, itchy skin and erosion of the external genitalia, red tongue with yellow and greasy coating and a slippery, rapid pulse. It may be explained by the environmental factors of dampness and fire that accumulate in the uterus.

**SF9C**

**Cold stagnation in the uterus pattern (TM1)**

A pattern characterized by cold pain of the lower abdomen, or pain in the lower abdomen or lumbosacral region during menstruation, with preference for warmth, delayed menstrual cycle, dark purple menstrual blood, or clear thin whitish vaginal discharge, white tongue coating, deep and tight pulse. It may be explained by accumulation of the cold factor in the uterus that blocks the flow of blood or qi.

**SF9D****Uterine deficiency cold pattern (TM1)**

A pattern characterized by aversion to cold, cold limbs, vague pain of lower abdomen, with preference for warmth and oppression, thin menstrual blood in light color, clear thin vaginal discharge, infertility, miscarriage, whitish complexion, pale tongue with white coating. It may be explained by deficiency of yang qi that fails to warm the uterus.

**SF9E****Blood accumulation in the bladder pattern (TM1)**

A pattern characterized by distension and sharp pain in the lower abdomen, difficulty and painful urination, purple or spotted tongue, wiry and rough pulse. It may be explained by injury of the lower abdomen or invasion of heat, leading to blood retention in the bladder.

**SF9F****Bladder heat accumulation pattern (TM1)**

A pattern characterized by distension of the lower abdomen, burning sensation and pain in urination, fever, thirst, red tongue with yellow coating, forceful and rapid pulse. It may be explained by accumulation of heat in the bladder system.

**SF9G****Bladder dampness-heat pattern (TM1)**

A pattern characterized by urgent, frequent painful urination, greasy yellow tongue coating towards the root and slippery pulse. It may be explained by accumulation of dampness and heat in the bladder system.

**SF9H****Bladder water accumulation pattern (TM1)**

A pattern characterized by distension and pain of the lower abdomen, and difficulty with urination. It may be explained by the failure of qi transformation in the bladder system, leading to water retention in the bladder.

**SF9J****Bladder deficiency cold pattern (TM1)**

A pattern characterized by aversion to cold, cold limbs, cold and pain in the lower abdomen, and profuse clear urination. It may be explained by deficiency of kidney yang, causing qi dysfunction of the urinary bladder.

**SF9Y****Other specified kidney system patterns (TM1)****SF9Z****Kidney system patterns (TM1), unspecified**

---

**SG1Y****Other specified organ system patterns (TM1)****SG1Z****Organ system patterns (TM1), unspecified**

## Meridian and collateral patterns (TM1) (SG20-SG5Z)

This section contains a group of TM patterns caused by functional disorder of meridians consisting of twelve main meridians and eight extra meridians.

## Main Meridian Patterns (TM1) (SG20-SG2Z)

This section contains a group of TM patterns caused by functional disorder of the twelve main meridians.

### **SG20**

#### **Lung meridian pattern (TM1)**

A pattern characterized by distention and fullness in the chest difficulty in breathing, cough and pain in the supraclavicular fossa. Symptoms and signs include pain and flow reversals along the inner aspect of the arm and heat in the palms, pain in the shoulders and back. It may be explained by Lung meridian dysfunction.

### **SG21**

#### **Large intestine meridian pattern (TM1)**

A pattern characterized by toothache and swollen neck. Symptoms and signs also include dry mouth, obstructions of the nose and throat, pain in the anterior aspect of the shoulder and upper arm, and impaired use of the forefinger. It may be explained by Large Intestine meridian dysfunction.

### **SG22**

#### **Stomach meridian pattern (TM1)**

A pattern characterized by cold shivering , a tendency to groan, frequent yawning, and dark complexion. Symptoms and signs include nasal congestion, facial deviations, lip sores, neck swelling, throat obstructions, water swelling in the abdomen and swelling and pain in the patella. Pain occurs along the channel path from the breast to groin, along the thigh and down the lateral shin to the top of the foot. It may be explained by Stomach meridian dysfunction.

### **SG23**

#### **Spleen meridian pattern (TM1)**

A pattern characterized by stiff tongue root, vomiting after eating, stomach pain, abdominal distention and a feeling of weakness and heaviness in the entire body. Symptoms and signs also include the pain in the tongue root, trembling, indigestion, heart vexation, cramping pain beneath the heart, swelling and upset of meridian Qi flowing along the inner aspect of the knee and thigh, and impaired use of the first toe. It may be explained by Spleen meridian dysfunction.

### **SG24**

#### **Heart meridian pattern (TM1)**

A pattern characterized by dry throat, heart pain and thirst with a desire to drink. Symptoms and signs also include yellow eyes, pain in the lateral abdomen, pain and circulation reversals in the ulnar aspect of the arm and heat and pain in the palms. It may be explained by Heart meridian dysfunction.

### **SG25**

#### **Small intestine meridian pattern (TM1)**

A pattern characterized by throat pain, jaw swelling, inability to turn the head to look backwards and pulling up and back of the (muscles) of the shoulders and arms. Symptoms and signs also include deafness, cheek swelling and pain along the neck, jaws, shoulders, upper arms, elbows and ulnar aspect of the forearms. It may be explained by Small intestine meridian dysfunction.

**SG26**

**Bladder meridian pattern (TM1)**

A pattern characterized by clashing headache and sensation that the eyes are being torn out. The nape of the neck is tight, there is pain in the spine, the waist arches backwards, the thigh cannot flex, the back of the knee has lumps and there is a sensation that the calf is being split apart. Symptoms and signs also include excess lacrimation, nasal congestion, pain in the head, neck, back, waist, sacrum, back of the knee, calf and foot, and impaired use of the little toe. It may be explained by Bladder meridian dysfunction.

**SG27**

**Kidney meridian pattern (TM1)**

A pattern characterized by hunger without the desire to eat, a facial complexion the color of dark lacquered wood, coughing up blood tinged sputum, thirst with shortness of breath, a desire to rise when sitting, dim vision and a worry of starvation. Symptoms and signs also include dry tongue, throat swelling, dry and painful throat, pain along the posterior border of the inner thighs, lower limb atrophy, heat and pain on the soles of the feet. It may be explained by Kidney meridian dysfunction.

**SG28**

**Pericardium meridian pattern (TM1)**

A pattern characterized by heat in the palms, spasms in the forearms and elbows and axillary swelling. Symptoms and signs also include heart vexation and heart pain. It may be explained by Pericardium meridian dysfunction.

**SG29**

**Triple energizer meridian pattern (TM1)**

A pattern characterized by deafness and tinnitus, swelling and obstruction of the throat. Symptoms and signs also include sweating, pain at the lateral corners of the eye and cheeks, pain behind the ear and along the shoulders, upper arms, elbows and outer border of the forearms and impaired use of the fourth finger. It may be explained by Triple Energizer meridian dysfunction.

**SG2A**

**Gallbladder meridian pattern (TM1)**

A pattern characterized by bitter taste in the mouth, frequent sighs, pain in the heart and rib-sides and an inability to rotate the body from side to side. Symptoms and signs also include headache and pain along the side of the face, pains at the lateral corners of the eyes, distension and pain in the supraclavicular fossa, swelling beneath the axilla, pain in the chest, thighs, along the outer knees down the shin, to the external malleolus and within various joints, and impaired use of the fourth toe. It may be explained by Gall Bladder meridian dysfunction.

**SG2B**

**Liver meridian pattern (TM1)**

A pattern characterized by pain in the waist and an inability to look upwards and downwards. In men there are swellings and pain in the groin and scrotum while in women there are swellings of the lower abdomen. Symptoms and signs also include chest fullness, counterflow vomiting, diarrhea with undigested food, inguinal swellings and incontinent and obstructed urine. It may be explained by Liver meridian dysfunction.

**SG2Y**

**Other specified main Meridian Patterns (TM1)**

**SG2Z**

**Main Meridian Patterns (TM1), unspecified**

## Extra Meridian Patterns (TM1) (SG30-SG3Z)

This section contains a group of TM patterns caused by functional disorder of eight extra meridians. The eight extraordinary vessels are supplementary to the main meridian system.

**SG30**

### **Governor vessel pattern (TM1)**

A pattern characterized by stiffness of the spine, fainting, chest pain coming from the lower abdomen, inability to defecate or urinate, infertility in women, urine obstruction, hemorrhoids, urinary incontinence and thirst.

**SG31**

### **Conception vessel pattern (TM1)**

A pattern characterized by hernia colic in men and vaginal discharge and abdominal lumps in women.

**SG32**

### **Yin heel vessel pattern (TM1)**

A pattern characterized by flaccid state in the regions belonging to yang and tense state in the regions belonging to yin.

**SG33**

### **Yang heel vessel pattern (TM1)**

A pattern characterized by flaccid state in the regions belonging to yin and tense state in the regions belonging to yang.

**SG34**

### **Yin link vessel pattern (TM1)**

A pattern characterized by heart pain.

**SG35**

### **Yang link vessel pattern (TM1)**

A pattern characterized by chills and fever.

**SG36**

### **Thoroughfare vessel pattern (TM1)**

A pattern characterized by hot flushes and cramping pain in the whole abdomen.

**SG37**

### **Belt vessel pattern (TM1)**

A pattern characterized by abdominal distention and a relaxed and weak lumber region with a feeling of sitting in the water.

**SG3Y**

### **Other specified extra Meridian Patterns (TM1)**

**SG3Z**

### **Extra Meridian Patterns (TM1), unspecified**

---

**SG5Y**

### **Other specified meridian and collateral patterns (TM1)**

**SG5Z**

### **Meridian and collateral patterns (TM1), unspecified**

## Six stage patterns (TM1) (SG60-SG6Z)

This section contains patterns in accordance with the six-stage theory. A common characteristic of the Six-stage patterns included in this section is their relationship with the acute febrile conditions.

### **SG60**

#### **Early yang stage pattern (TM1)**

A pattern that usually manifests at the onset of a febrile state. The pattern is characterized by fever and aversion to cold, headache, painful joints, neck stiffness or a floating pulse. They may be explained by a reaction to pathogens at exterior layer of the body.

### **SG61**

#### **Middle yang stage pattern (TM1)**

A pattern that usually manifests several days after the onset of a febrile state. The pattern is characterized by high fever, profuse sweating, abdominal distension, severe thirst with desire for water, constipation, tidal fever (generalized excessive sweating with high fever repeating regularly like in a tide), a delirium, restlessness, panting, red face, big forceful or slippery pulse, or thick dry tongue coating (white or yellow). It may be explained by reactions to pathogens at the interior layer of the body.

### **SG62**

#### **Late yang stage pattern (TM1)**

A pattern that usually manifests several days after the onset of a febrile state. The pattern is characterized by alternating chills and fever, loss of appetite, bitter taste in mouth, dry throat, dizziness, fullness in the chest and hypochondrial resistance and discomfort, white coat of the tongue or a wiry pulse. It may be explained by reactions to pathogens in the layer between exterior and interior of the body.

### **SG63**

#### **Early yin stage pattern (TM1)**

A pattern that usually manifests at the onset or sometime during the course of a febrile state. This pattern is characterized by abdominal fullness, vomiting, loss of appetite, recurrent abdominal pain, diarrhea, decreased food intake, deep, slow or weak pulse. They may be explained by mild cold at the interior layer of the body.

### **SG64**

#### **Middle yin stage pattern (TM1)**

A pattern characterized by desire to lie down or to have a rest, cold limbs, diarrhea, dysphoria, desire to sleep, thready rapid pulse or faint thin pulse. It may be explained by moderate cold at the interior layer of the body.

### **SG65**

#### **Late yin stage pattern (TM1)**

A pattern characterized by thirst, rising qi, burning sensation on the chest, hungry with inability to eat, diarrhea, cold extremities. It may be explained by severe cold at the interior layer of the body.

### **SG6Y**

#### **Other specified six stage patterns (TM1)**

### **SG6Z**

#### **Six stage patterns (TM1), unspecified**

## Triple energizer stage patterns (TM1) (SG70-SG7Z)

This section comprises dysfunctional systemic patterns of coordination, assimilation, elimination and integration attributed to invasion and transformation of the dampness-heat factor on the three portions of the body cavity (upper energizer, middle energizer and lower energizer), through which the visceral qi is transformed.

### **SG70**

#### **Upper energizer stage patterns (TM1)**

This section comprises dysfunction attributed to invasion of the pathogenic heat on the lung and pericardium, i.e., the portion above the diaphragm housing the organs of the heart and lung systems.

### **SG71**

#### **Middle energizer stage patterns (TM1)**

This section comprises dysfunction attributed to invasion of the pathogen on the upper abdominal cavity, i.e. the portion between the diaphragm and the umbilicus housing the organs of the spleen, stomach, liver and gallbladder systems.

### **SG72**

#### **Lower energizer stage patterns (TM1)**

This section comprises a dysfunction attributed to be deficiency of the body below the navel or to invasion of the dampness-heat factor on the lower abdominal cavity, (i.e. the portion below the umbilicus housing the organs of the kidneys, bladder, small and large intestines systems) and depriving the yin of the liver and kidney systems.

### **SG7Y**

#### **Other specified triple energizer stage patterns (TM1)**

### **SG7Z**

#### **Triple energizer stage patterns (TM1), unspecified**

## Four phase patterns (TM1) (SG80-SH3Z)

This section contains patterns related to four phases – Defence, Qi, Nutrient and Blood. The four phase represent four levels of severity as the heat, dryness or dampness factors progress from the exterior to the interior. The sub-sections of the four phase patterns are ordered in accordance with progressive movement of the heat, dryness or dampness factors from the Defence to the Qi phase, from the Qi to the Nutrient phase and from the Nutrient to the Blood Phase.

## Defense phase patterns (TM1) (SG80-SG8Z)

This section is the initial stage of an epidemic febrile disease when only the superficial part of the defense qi is involved, marked by fever, slightly aversion to wind and cold, headache, red tongue tip and rapid floating pulse.

### **SG80**

#### **Dampness obstructing the defense yang pattern (TM1)**

A pattern characterized by aversion to cold, decrease or lack of sweat production, fever, headache, motor dysfunction, a sensation of pressure in the chest, loss of appetite, absence of thirst, white, greasy tongue coating or soggy, moderate pulse. It may be explained by an accumulation of dampness in the defense aspect and obstruct the defense qi.

**SG81**

**Heat attacking the lung defense pattern (TM1)**

A pattern characterized by coughing, panting and qi reverse flow, urinating dysfunction, pain in the body, hiccup, acid reflux and nausea. It may be explained by warm pathogen interfering the function of lung system qi diffusion and down bearing as well as digestive function of the stomach.

**SG8Y**

**Other specified defense phase patterns (TM1)**

**SG8Z**

**Defense phase patterns (TM1), unspecified**

**Qi phase patterns (TM1) (SG90-SG9Z)**

This section is the second stage of an epidemic febrile disease showing intrusion of the heat factor on the yang brightness meridian or the lung, gallbladder, spleen, stomach or large intestine systems, marked by high fever without chills, strong thirst, flushed face, dark urine, red tongue with yellow coating and rapid forceful pulse.

**SG90**

**Heat entering the qi phase pattern (TM1)**

A pattern characterized by fever, excessive thirst, reddish urine, constipation, red tongue with a yellow coating, or a surging or rapid pulse. It may be explained by the environmental factor of fire entering the qi aspect or imbalance between the fire and healthy qi.

**SG91**

**Qi phase dampness and heat pattern (TM1)**

A pattern characterized by fever, chest pain, abdominal distension, yellow complexion, lethargy, vomiting, nausea, dark urine, a red tongue with a yellow, greasy coating, and a soggy, rapid or slippery pulse. It may be explained by the environmental factors of dampness and fire entering the qi aspect.

**SG92**

**Dampness obstructing the qi phase pattern (TM1)**

A pattern characterized by fever, headache, decreased mental acuity, a generalized feeling of heaviness or pressure in the chest, bone and joint pain, anorexia, abdominal fullness, diarrhea, greasy tongue coating, or soggy, moderate pulse. It may be explained by the environmental factors of dampness and fire entering the qi aspect.

**SG9Y**

**Other specified qi phase patterns (TM1)**

**SG9Z**

**Qi phase patterns (TM1), unspecified**

**Nutrient phase patterns (TM1) (SH00-SH0Z)**

This section is a serious development of an epidemic febrile disease characterized by the heat factor entering the nutrient aspect and disturbing the heart system, manifested by fever higher at night, restlessness or delirium, faint skin rashes and crimson tongue.

**SH00**

**Nutrient qi and defense qi disharmony pattern (TM1)**

A pattern characterized by mild fever, slight aversion to wind, intermittent sweating or perspiration or slow pulse. It may be explained by an imbalance of nutrient and defense qi.

**SH01****Heat in the nutrient phase pattern(TM1)**

A pattern characterized by fever that is more severe at night, agitation, restlessness, delirium, insomnia, skin rash, or red or purple tongue. It may be explained by the environmental factor of fire entering the nutrient aspect or disturbing the heart system.

**SH02****Heat entering the nutrient and blood phase pattern (TM1)**

A pattern characterized by fever that increases at night, agitation, insomnia, coma, thirst, indistinct discolored spots on the skin (macule), bleeding, constipation, a purple tongue, or a thready, rapid pulse. It may be explained by the environmental factor of fire entering the nutrient and blood aspects, blood damage, or disturbance of the heart system.

**SH0Y****Other specified nutrient phase patterns (TM1)****SH0Z****Nutrient phase patterns (TM1), unspecified****Blood phase patterns (TM1) (SH10-SH1Z)**

This section is an epidemic febrile disease at its severest stage, characterized by severe damage of yin blood, with various forms of bleeding such as hemoptysis, epistaxis, hematuria, hematochezia, in addition to high fever, coma or convulsions.

**SH10****Blood phase pattern (TM1)**

A pattern characterized by fever, spasm of the hands and feet, coma, delirium, dark or purple macula, vomiting of blood, bleeding, or purple tongue. It may be explained by the environmental factor of fire entering the blood aspect, deficiency of blood or yin fluid, or massive and sudden blood loss.

**SH11****Heat entering the blood phase pattern(TM1)**

A pattern characterized by profuse bleeding, including coughing up blood, nosebleeds, blood in urine and stool, high fever, coma, convulsions or crimson tongue. It may be explained by the environmental factor of fire entering the blood aspect or damaging the blood.

**SH1Y****Other specified blood phase patterns (TM1)****SH1Z****Blood phase patterns (TM1), unspecified****SH3Y****Other specified four phase patterns (TM1)****SH3Z****Four phase patterns (TM1), unspecified**

## Four constitution medicine patterns (TM1) (SH40-SH9Z)

Four Constitution Medicine Patterns are classified by each type of constitution: Large Yang Type (Large Lung Small Liver), Small Yang Type (Large Spleen Small Kidney), Large Yin Type (Large Liver Small Lung), and Small Yin Type (Large Kidney Small Spleen). Metabolic processes in Four Constitution Medicine can be divided into 2 categories: Qi-Humor metabolism and Water-Food metabolism. Large Yang Type patterns and Large Yin Type patterns are caused by disorder of the Qi-Humor metabolism while Small Yang Type patterns and Small Yin Type patterns are caused by disorder of the Water-Food metabolism. Patterns occurring for each type of constitution can be subdivided into three types: external TM disorder, internal TM disorder and external-internal combined TM disorder. External TM disorder is caused by imbalance of Seong (Innate Nature) and internal TM disorder is caused by the imbalance of Jeong (Emotional Disposition).

## Large yang type patterns (TM1) (SH40-SH4Z)

This section comprises a range of patterns which present more commonly in individuals who have the large yang type constitution with characteristics such as strong lung and weak liver systems.

### SH40

#### **Large yang type exterior origin lower back pattern (TM1)**

A pattern characterized by systemic heat, cold-intolerance, somatic pain in the mild stage and leg enervation (pseudo-paraparesis) in the advanced stage. It may be explained by an excessiveness of the dispersive energy of the lung system (upper sector) and a weakening of the inspirational concentrative energy of the liver system sector (mid-lower sector) on inhalation, which damages the lower back area (dorsal mid-lower sector) that is associated with the liver system.

### SH41

#### **Large yang type interior origin small intestine pattern (TM1)**

A pattern characterized by abdominal pain, borborygmus, diarrhea, dysentery in the mild stage and dysphagia or regurgitation in the advanced stage. It may be explained by a strengthening in the expanding and dispersive force of the energy-fluid of the esophagus (frontal upper sector), and a weakening in the condensing and concentrative force of the energy-fluid of the small intestine system (frontal mid-lower sector), producing the imbalance of the energy and fluid metabolism and subsequent damage of energy and fluid.

### SH42

#### **Large yang type exterior interior combined pattern (TM1)**

A pattern characterized by exterior symptoms that include systemic heat, cold-intolerance, somatic pain, and leg enervation (pseudo-paraparesis); interior symptoms that include concurrent abdominal pain, borborygmus, diarrhea, dysentery, dysphagia or regurgitation. It may be explained by the damage of the inspirational concentrative energy of the liver system (mid-lower sector) with weakening in the condensing and concentrative force of the energy-fluid of the small intestine system (frontal mid-lower sector).

### SH4Y

#### **Other specified large yang type patterns (TM1)**

### SH4Z

#### **Large yang type patterns (TM1), unspecified**

## Small yang type patterns (TM1) (SH50-SH5Z)

This section comprises a range of patterns which present more commonly in individuals who have the Small Yang Type constitution with characteristics such as strong spleen and weak kidney systems.

### SH50

#### **Small yang type lesser yang wind damage pattern (TM1)**

A pattern characterized by systemic heat, cold-intolerance, somatic pain, vexation, bitter taste in mouth, dry throat, dizziness, headache, deafness. It may be explained by the failure of the yin energy in the spleen system (mid-upper sector) to descend to the kidney system (lower sector) due to the heat factor which results in yin energy confinement in the upper back (dorsal mid-upper sector). There is no damage to the yin energy in the kidney system (lower sector).

### SH51

#### **Small yang type yin depletion pattern (TM1)**

A pattern characterized by diarrhea, often accompanied by either heat-related patterns with headache or cold-related patterns with stomach ache. It may be explained by the failure of yin energy in the spleen system (mid-upper sector) to descend to the kidney system (lower sector) due to the heat factor. It is accompanied with the damage of yin energy of the kidney system (lower sector).

### SH52

#### **Small yang type chest heat congested pattern (TM1)**

A pattern characterized by systemic heat, constipated bowel movement and thirst. It may be explained by the failure of clear yang in the large intestine system (frontal lower sector) to ascend to the stomach system (frontal mid-upper sector) as well as to the extremities and head, in particular the face. An intense heat factor is formed in the stomach system (frontal mid-upper sector).

### SH53

#### **Small yang type yin deficit pattern (TM1)**

A pattern characterized by diurnal flaring-up of systemic heat, thirst, coldness in the dorsal region, and retching, emaciation of the legs, turbid urine. It may be explained by deficiency of the clear yang in the large intestine system (frontal lower sector) which leads to a weakening of yin energy in the kidney system (lower sector).

### SH54

#### **Small yang type exterior interior combined pattern (TM1)**

A pattern characterized by exterior symptoms that include cold-intolerance, diarrhea, somatic pain, dizziness, headache or concurrent heat intolerance and constipated bowel movement. It may be explained by the failure of yin energy in the spleen system (mid-upper sector) descending and connecting to the kidney system (Lower sector)., Concurrently, clear yang in the large intestine system (frontal lower sector) is damaged by the heat factor.

### SH5Y

#### **Other specified small yang type patterns (TM1)**

### SH5Z

#### **Small yang type patterns (TM1), unspecified**

## Large yin type patterns (TM1) (SH60-SH6Z)

This section comprises a range of patterns which present more commonly in individuals who have the large yin type constitution with characteristics such as strong liver and weak lung systems.

**SH60**

### **Large yin type supraspinal exterior pattern (TM1)**

A pattern characterized by cold-intolerance (accompanied with the absence of perspiration), systemic heat, and dyspnea (labored breathing). It may be explained by a decreased capability of the esophagus (frontal upper sector) to expire and to disperse energy and fluid.

**SH61**

### **Large yin type esophagus cold pattern (TM1)**

A pattern characterized by post-prandial stuffiness, and fullness, and leg weakness, coughing, edema etc, which is based on symptoms of diarrhea, absence of perspiration, palpitation, dyspnea (labored breathing), plum-pit, pale complexion. It may be explained by a weakening of the expirational dispersive energy of the lung system sector (upper sector), in addition to a decreased capability of the esophagus sector (frontal upper sector) to expire and to disperse energy and fluid.

**SH62**

### **Large yin type liver heat pattern (TM1)**

A pattern characterized by ocular pain, dryness of nose, sleep disorder, tidal sweating, constipated bowel movement, abdominal fullness, thirst, delirium. It may be explained by an excessive condensation and concentration of energy and fluid in the liver system (mid-lower sector) causing the stagnation of energy and fluid, followed by the production of the heat factor.

**SH63**

### **Large yin type dryness heat pattern (TM1)**

A pattern characterized by black discoloration and parching of the fingertips and nummular erythematous patches and sores over the whole body, constipation, frequent urination, thirst, consumptive overexertion, tinnitus, dim vision, weakened legs or lower back pain. It may be explained by an excessiveness in the inspirational concentrative energy of the liver system sector (mid-lower sector), called the liver-heat state, in addition to the weakening of the dispersive energy of the lung system (upper sector) on exhalation, called the lung-dryness state, producing an imbalance of energy and fluid metabolism, followed by the abnormal consumption of energy and fluid.

**SH64**

### **Large yin type exterior Interior combined pattern (TM1)**

A pattern characterized by exterior symptoms that include cold-intolerance (accompanied by the absence of perspiration), dyspnea (labored breathing), somatic pain, diarrhea; interior symptoms that include concurrent systemic heat, ocular pain, dryness of the nose, sleep disorder, tidal sweating, constipated bowel movement, thirst. It may be explained by the damage of the esophagus (frontal upper sector) which expires and disperses energy and fluid and concurrently an excessive condensation and concentration of the energy and fluid in the liver system (mid-lower sector).

**SH6Y**

### **Other specified large yin type patterns (TM1)**

**SH6Z**

### **Large yin type patterns (TM1), unspecified**

## Small yin type patterns(TM1) (SH70-SH7Z)

This section comprises a range of patterns which present more commonly in individuals who have the small yin type constitution with characteristics such as strong kidney and weak spleen systems.

**SH70**

### **Small yin type congestive hyperpsychotic pattern (TM1)**

A pattern characterized by systemic heat, somatic pain (including headache) or absence of perspiration. It may be explained by the failure of yang energy in the kidney system (lower sector) to ascend and connect to the spleen system (mid-upper sector) due to the cold factor, and then it is confined in the infra-spinal (dorsal lower sector). There is no damage to the yang energy of the spleen system (mid-upper sector).

**SH71**

### **Small yin type yang depletion pattern (TM1)**

A pattern characterized by systemic heat, somatic pain (including headache), and presence of perspiration. It may be explained by the failure of yang energy in the kidney system (lower sector) to ascend and to connect to the spleen system (mid-upper sector) due to the cold factor and then it is confined in the Infra-spinal sector (dorsal lower sector), with the yang energy of the spleen system sector (mid-upper sector) already damaged.

**SH72**

### **Small yin type greater yin pattern (TM1)**

A pattern characterized by abdominal pain and diarrhea, converse absence of dry mouth, somatic pain, or agitation. It may be explained by the damage of the warm energy in the stomach system (frontal mid-upper sector) that is oppressed by the cold factor of the large intestine system sector (frontal lower sector), though not threatening the yang energy of the spleen system (mid-upper sector) itself.

**SH73**

### **Small yin type lesser yin pattern (TM1)**

A pattern characterized by abdominal pain and diarrhea, and presence of dry mouth, headache, somatic pain, and agitation. It may be explained by damage of the warm energy of stomach system (frontal mid-upper sector) due to intense cold factor of the large intestine system (frontal lower sector). It is accompanied with the damage of the yang energy of the spleen system (mid-upper sector).

**SH74**

### **Small yin type exterior interior combined pattern (TM1)**

A pattern characterized by exterior symptoms that include systemic heat, headache, somatic pain; interior symptoms that include abdominal pain and diarrhea (bowel irritability) at a same time. It may be explained by the failure of yang energy in the kidney system (lower sector) to ascend and connect to the spleen system (mid-upper sector), concurrently the warm energy in the stomach system (frontal mid-upper sector) is damaged by the cold factor.

**NOT TO BE TRANSLATED - PLEASE NOTE:** This whole section is currently under development and is NOT to be translated for now. Title: Module II (SK00-ST2Z)

This module refers to disorders and patterns of Ayurveda and related systems such as Siddha and Unani. ('Unani' includes traditional medicine diagnostic entities used in India, Iran, Pakistan, United Arab Emirates and elsewhere.) This list represents a union set of harmonized traditional medicine conditions of the corresponding classifications.

A disorder in traditional medicine (TM2) [1] refers to a set of dysfunctions in any body system which is diagnosed from associated signs, symptoms, or findings. Each disorder may be defined by its symptomology, etiological explanation based on traditional medicine, course and outcome, or treatment response or linkage to interacting environmental factors.

A pattern in traditional medicine (TM2) refers to the manifestation of the patient's health condition at a given moment in time or constitution, temperament. It delivers information reflecting the overall manifestation or response of the person. It encompasses both specific symptoms/signs and non-specific findings.

[1]: 'TM2' refers to Traditional Medicine conditions - Module 2. The (TM2) designation is used throughout this module for every traditional medicine diagnostic category in order to be clearly distinguishable from conventional medicine concepts.

**Traditional medicine disorders (TM2) (SK00-SR0Z)**

A disorder in traditional medicine (TM2) refers to a set of dysfunctions in any body system which is diagnosed from associated signs, symptoms, or findings. Each disorder may be defined by its symptomology, etiological explanation based on traditional medicine, course and outcome, or treatment response or linkage to interacting environmental factors.

**Head, brain, nerve and movement disorders (TM2) (SK00-SK5Z)****Headache disorders (TM2) (SK00-SK0Z)****SK00****Cephalalgia disorder (TM2)**

It is characterized by headache; may be associated with occipital pain.

(AYU) It is caused by any of the three dosha individually or together affecting the head

(SID) It is explained by increased *Vaṛi*. Among the seven physical constituents *Cāram*, *Cennīr* and *Ūṇ* gets affected.

(UNA) It is caused by either derangement of temperament whether it is simple or involving matter, or predominance of humours or trauma and any other external factors

**SK01**

**Migraine disorder (TM2)**

Episodic, severe headache involving one half of the head. May be associated with nausea and vomiting.

(AYU) aggravated vata, pitta causing pain in one part of the head.

(SID) It is explained by increased Azal. Among the seven physical constituents Cāram, Cennīr and Ūṇ are affected.

(UNA) Accumulation of bad humours or Riyāḥ in one half of the head.

**SK0Y**

**Other specified headache disorders (TM2)**

**SK0Z**

**Headache disorders (TM2), unspecified**

**Nervous system disorders (TM2) (SK10-SK1Z)**

**SK10**

**Vertigo and giddiness disorder (TM2)**

Experience of darkness and vertigo/dizziness on standing. May be associated with difficulty in intake of food, hypersalivation, balgham in the throat, cough and dyspnoea.

(AYU) due to aggravation of pitta, vata or decrease of kapha affecting the ear faculty.

(SID) It is explained by increased aiyam influences Azal and affects Vayu for upward biological movements, Vayu for circulation, Vayu for respiration and digestion. Among the seven physical constituents Cāram, Cennīr gets affected.

(UNA) It is caused by accumulation of thin/thick humours, Bukhārāt and Rīḥ in the ventricles of brain or vessels of brain thereby creating hindrance in the flow of psychic Rūḥ and motor and sensory faculties.

**SK1Y**

**Other specified nervous system disorders (TM2)**

**SK1Z**

**Nervous system disorders (TM2), unspecified**

**Paralysis disorders (TM2) (SK20-SK2Z)**

**SK20**

**Facial palsy disorder (TM2)**

Deviation of one side of the face, difficulty in speech, loss of wrinkling, non closure of eyes and lips and dribbling of saliva from the angles of mouth

(AYU) It is caused by increased vata affecting one half of the face.

(SID) It is explained by increased aiyam along with Vali. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by flaccidity of face and eye lids due to predominance of coldness and obstruction in the passage of Rūḥ

**SK21**

**Paraplegia disorder (TM2)**

Flaccidity, loss of function in both lower limbs.

(AYU) obstruction to body channels or severe lack of nutrition leading to aggravation of vata affecting motor functions.

(UNA) It is caused by pouring of the fluids related to Dam and Balgham on the origin of nerves of lower limbs from ventricles of brain

**SK22**

**Hemiplegia disorder (TM2)**

"Loss of mobility or flaccidity of one side of the body. May be associated with difficulty in swallowing, speech, deranged cognitive functions, tactile sensation.

(AYU) obstruction to body channels or severe lack of nutrition leading to aggravation of vata affecting motor, sensory and cognitive functions.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by the pouring of fluids related to Dam and Balgham on the origin of nerves of one side of body from ventricles of brain"

**SK2Y**

**Other specified paralysis disorders (TM2)**

**SK2Z**

**Paralysis disorders (TM2), unspecified**

**Paroxysmal disorders (TM2) (SK30-SK3Z)**

**SK30**

**Seizure disorder (TM2)**

Sudden, involuntary contractions of muscles, associated with dribbling of saliva, froth in the mouth and deviation of mouth, staring of eyes or rolling of eyeball

(AYU) vitiated vata affecting motor faculties.

(SID) It is explained by increased Aḷal. Among the seven physical constituents gets Cāram to Cukkīlam get affected.

(UNA) impaired temperament, weakness of mental powers.

**SK31**

**Epilepsy disorder (TM2)**

Transient loss of consciousness, paroxysmal convulsions, froth from the mouth, possible loss of memory of the episode.

(AYU) mind is clouded by rajas and tamas and the aggravated dosha occupy the channels of consciousness.

(SID) It can be explained by derangement of Mukkurram. All the seven physical constituents are affected.

(UNA) Obstruction in the ventricles of the brain due to thick viscous humours.

**SK3Y**

**Other specified paroxysmal disorders (TM2)**

**SK3Z**

**Paroxysmal disorders (TM2), unspecified**

**SK50**

**Scalp affliction disorder (TM2)**

Headache, heaviness around eyes, hair loss, bleeding per nasal cavity, dryness of throat, ear.

(AYU) It is caused by vitiated dosha localising the scalp

(SID) It is explained by increased Vāṇi, Azāl and Aiyam. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

**SK51**

**Cervicobrachial pain disorder (TM2)**

Pain in the neck, throat radiating up to the upper limbs, restricted movements. May be associated with, insomnia, temporary loss of hearing, memory.

(AYU) vitiation of vata, pitta affecting neck, upper arms.

(SID) It is explained by increased Vāṇi. Among the seven physical constituents Cāram, Cennīr, Ūṇ and Kozuppu gets affected.

(UNA) predominance of moistness or dryness.

**SK52**

**Tremor disorder (TM2)**

"It is characterised by tremors, rigidity, and may be associated with dryness of the skin and insomnia.

(AYU) Aggravation of vata affecting the motor system

(SID) It is explained by increased Vāṇi along with Azāl. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Enpu gets affected.

(UNA) weakness or defect in the motor system, impaired cold temperament"

**SK53**

**Stammering disorder (TM2)**

"Loss of speech clarity, lalling, strained speech, may be aggravated due to excess speech.

(AYU) aggravation of vata affecting kapha and faculty of speech.

(SID) It is explained by increased Vāṇi and Azāl. Among the seven physical constituents all seven gets affected.

(UNA) It is caused by moderate flaccidity of tongue."

**SK54**

**Numbness disorder (TM2)**

The complete/partial loss of sensation of any organ of the body and feeling of smoothness and restricted movements

(AYU) vitiation of vata, kapha affecting whole body

(SID) It is explained by increased Vāṇi. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) impaired temperament of nerves, predominance of dryness on nerves, obstruction of nerves caused by Balgham.

**SK55**

**Weakness of thighs due to vata disorder (TM2)**

"flaccidity, log like immobility of the thighs.

(AYU) obstruction of vata by the ama (state of incomplete digestion, transformation or metabolism).

(SID) It is explained by increased Vali along with Aiyam. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected."

**SK5Y**

**Other specified head, brain, nerve and movement disorders (TM2)**

**SK5Z**

**Head, brain, nerve and movement disorders (TM2), unspecified**

Eye, ear, nose, throat and neck disorders (TM2) (SK60-SL2Z)

Eye disorders (TM2) (SK60-SK7Z)

**SK60**

**Ocular hyperemia disorder (TM2)**

"Appearance of reddish blood vessels over the sclera

(AYU) It is caused by vitiated blood

(SID) It is explained by increased Aṣal.

(UNA) It is caused due to the predominance of Dam."

**SK61**

**Prolapse iris disorder (TM2)**

Prolapse or protrusion of the uveal tissue through a weak point in the eyeball resembling "mass resembling goat's stool" or "head of a housefly." May be associated with pain, warm, slimy coppery tears.

[AYU] It is caused by all the three vitiated dosha, blood and fatty tissue.

(SID) It is explained by increased Vali. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu are affected.

[UNA] It is caused by excessive accumulation of moistness in the eye.

**SK62**

**Blepharitis disorder (TM2)**

hard swelling and redness in eyelids, itching. May be associated with crusting at the eyelid margins or base of the eyelashes, flaking of skin on eyelids, falling of eye lashes.

[AYU] aggravated kapha, vata affecting skin, blood and muscle tissue.

[SID] It is explained by increased Vali (Vayu for intellectual functions and Vayu for ophthalmic function) and Aṣal (Aṣal for vision). Among the the seven physical constituents, Cāram to Ūṇ is affected.

[UNA] presence of acrid and salty morbid matter in eyelids.

**SK63**

**Day blindness disorder (TM2)**

"Loss of vision during day time.

(AYU) vitated pitta affecting the vision

(SID) It is explained by increased Vali (Vayu for intellectual functions and Vayu for ophthalmic function), Aṣal (Aṣal for vision) and Aiyam (Aiyam for strengthening sense organs). Among the seven physical constituents Cāram, Cennīr, Ūṇ gets affected

(UNA) dissolution of optic Rūḥ and humours of eyes in sunlight"

**SK64**

**Night blindness disorder (TM2)**

loss of vision during night.

[AYU] vitated kapha affecting the vision

[SID] It is explained by increased Vali (Vayu for intellectual functions and Vayu for ophthalmic function), Aṣal (Aṣal for vision) and Aiyam (Aiyam for strengthening sense organs). Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

[UNA] accumulation of specific viscous humours which affect optic channels

**SK65**

**Cataract disorder (TM2)**

"Impairment in vision such as haziness, colored halos, polyopia and seeing objects as if through cloth or net

(AYU) It is caused due to vitiated dosha affecting the layers of the eye.

(SID) It is explained by increased Vali (Vayu for intellectual functions and Vayu for ophthalmic function) and Aiyam (Aiyam for strengthening sense organs). Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu are affected.

(UNA) It is caused by congestion of thick and morbid humours leading to decreased nutrition of whole body including lens of eye."

**SK66**

**Conjunctivitis disorder (TM2)**

"Redness of eye, lacrimation, photophobia, burning sensation

(AYU) It is caused due to vitiated dosha affecting the eye.

(SID) It is explained by increased vali (nagan and koorman), (aalosaga Aṣal) and aiyam (tharpagam). Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) It is caused by the predominance of humours and Rīḥ"

**SK67**

**Corneal disorder (TM2)**

"Disease of cornea affecting vision

(AYU) vitiated dosha affecting the eye.

(SID) It may be explained by deranged Vali, Aṣal, and Aiyam and their variations; Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Koṣuppu, are affected.

(UNA) impairment of temperament, derangement of humours. "

**SK68**

**Tear sac swelling disorder (TM2)**

"swelling over medial canthus with pus discharge and foul smell. Inability to rotate the eyeball due to papules in the inner lower eyelid associated with flow of tears continuously

(AYU) vitiated dosha obstructing lacrymal passage

(SID) It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) obstruction of lacrimal passage due to thick viscous humour. "

**SK69**

**Eyelid cyst disorder (TM2)**

"pappilary growth in the outer canthus of eye.

(AYU) vitiated dosha affecting the eye.

(SID) It is explained by increased Aḷal and Vaḷi. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by excessive intake of Balgham producing diets and flowing of matter related to Balgham into the eyelids."

**SK6A**

**Dry eye disorder (TM2)**

Dryness of eyes, decreased lacrimation, reduced stickness of eyes

[AYU] It is caused by all the three dosha mainly, vata affecting the eye.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected. [UNA] It is caused by dryness of temperament as a result of excessive intake of Sawdā'.

**SK6B**

**Ectropion disorder (TM2)**

Eversion of eyelid

[SID] It is explained by increased vali (nagan and koorman) and Aḷal (aalosaga Aḷal). Among the seven physical constituents Cāram and Cennīr gets affected.

[UNA] It is caused by predominance of coldness in the eyelids

**SK6C**

**Pterygium disorder (TM2)**

Muscular growth from the inner canthus towards cornea leads to loss of vision if it reaches the pupil

[AYU] It is caused by vitiated dosha causing muscular growth over the sclera

[SID] It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram and Cennīr gets affected.

[UNA] it is caused by the predominance of viscous humours in the eye.

**SK6D**

**Lacrimation disorder (TM2)**

Watering of eyes

[AYU] It is caused by vitiation of any of the three dosha especially vata

[SID] It is explained by increased Vaḷi, Aḷal and Aiyam. Among the seven physical constituents Cāram, Cennīr, Un gets affected.

[UNA] It is caused to accumulation of fluid in head and eyes

**SK6E**

**Trichiasis disorder (TM2)**

Inversion of eyelashes, continuous irritation of eyeballs, watering, fall of eye lash

[AYU] It is caused by vitiation of all the three dosha affecting the root of eye lashes

[SID] It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

[UNA] It is caused by predominance of dryness of the eye lashes.

**SK6F**

**Eyelid tumour disorder (TM2)**

Irregular growth in the eyelids, painless and movable

[AYU] It is caused due to the vitiated three dosha affecting the eyelids

[SID] It is explained by increased Vaḷi and Aḷal (Among the seven physical constituents Cāram, Cennīr, Ūṇ and Kozuppu gets affected.

[UNA] It is caused by accumulation of viscous humour on the eye lids

**SK6G**

**Hard swelling of eyelid disorder (TM2)**

Hard, rough growth of eye lid.

[AYU] It is caused by the morbid dosha localising in the eye lids.

(SID) It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

[UNA] It is caused by premodinence of viscous Sawdā'.

**SK6H**

**Eyelid wart disorder (TM2)**

"Wart like growth in the external surface of eyelids.

(AYU) It is caused by the vitiated blood affecting the eyelid

(UNA) It is caused by putrefaction of Sawdā' flowed into the eyelids."

**SK6J**

**Excessive blinking disorder (TM2)**

Excessive blinking

[AYU] It is caused due to increased vata affecting the eye lid.

(SID) It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

[UNA] It is caused due to accumulation of thick Riyāḥ in the eye lids.

**SK6K**

**Eyelid haematoma disorder (TM2)**

Blackish discoloration of eye lid with swelling and pain

[AYU] It is caused due to vitiation of all the three dosha

[SID] It is explained by increased Aṣal . Among the seven physical constituents Cāram and Cennīr gets affected.

**SK6L**

**Ptosis disorder (TM2)**

Dropping of upper eyelid

[AYU] It is caused due to vata affecting the eye lid

[SID] It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

[UNA] It is caused by the obstruction in the passage of Rūḥ due to predominance of coldness and moistness in the upper eye lid, paralysis of eye muscles, any congenital defect , conjunctivitis, tumours or any inflammation of eyelids.

**SK6M**

**Sticky eyelids disorder (TM2)**

Eye lids adhere together associated with itching, swelling and redness/congestion.

[AYU] It is caused by kapha and blood affecting the eye lid.

(SID) It is explained by increased Vaḷi and Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu, Eṇpu and Mūlai are affected.

[UNA] It is caused by the predominance of thick viscous matter in the eye lids, due to some diseased condition of eyeball e.g. corneal ulcers, surgery for Pterygium, trachoma, etc.

**SK6N**

**Chalazion disorder (TM2)**

Big hard painless movable swelling on the eyelid

[AYU] It is caused by predominance of kapha.

(SID) It is explained by increased Vaḷi and Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu are affected.

[UNA] It is caused by predominance of Balgham in upper eye lid.

**SK6P**

**Stye disorder (TM2)**

Hard and spindle shaped swelling, pain, redness at the root of eyelashes may be associated with pus discharge

[AYU] It is caused by vitiation of blood affecting the eye lid

[SID] It is explained by increased Aṣal and Aiyam. Among the seven physical constituents Cāram and Cennīr gets affected.

[UNA] It is caused by predominance of deranged Dam and Ṣafrā'

**SK6Q**

**Ptilosis disorder (TM2)**

"Falling of eyelashes

(AYU) vitiation of dosha and blood.(Ensure the diacritics)

(SID) It is explained by increased Aṣal (Aṣal for vision). Among the seven physical constituents Cāram and Cennīr gets affected

(UNA) Malnutrition, waste humours, Ṣafrā' or Sawdā'."

**SK6R**

**Non-inflammatory swelling of eye disorder (TM2)**

abrupt mild eye swelling

(AYU) vitiation of all three dosha affecting the whole eye.

(SID) It is explained by increased Vaḷi and Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

(UNA) accumulation of Rṭḥ at the site.

**SK6S**

**Periorbital polyp disorder (TM2)**

Growth in periorbital region.

[AYU] it is caused due to morbid dosha vitiating the skin, muscle and adipose tissue causing muscular growths in the eye.

[SID] It is explained by increased Vaḷi and Aṣal (Aṣal for vision). Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

**SK6T**

**Phlyctenular nodule disorder (TM2)**

Hard white/red nodule on inner canthus, outer canthus, below eyelids and around cornea in a beaded manner.

(AYU) it is caused due to vitiated three dosha affecting the eye.

(SID) It is explained by increased Vaḷi and Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, are affected.

(UNA) It is caused by accumulation of thick Balgham or Dam.

**SK6U**

**Trachoma disorder (TM2)**

Small papules in the inner surface of eyelids with irritation and difficulty in movements of eyelids.

[AYU] It is caused due to vitiated kapha localising on the inner surface of the eyelids.

[SID] It is explained by increased Vaḷi and Aṣal . Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

[UNA] It is caused by the predominance of dryness and accumulation of acrid humors in the eye lids

**SK6V**

**Corneal opacity disorder (TM2)**

"opacity of cornea subsequent to corneal ulceration.

(AYU) vitiation of blood affecting cornea.

(SID) It is explained by increased Vaḷi ( Vayu for intellectual functions and Vayu for ophthalmic function) and Aḷal (Aḷal for vision). Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) accumulation of morbid matter at the site."

**SK6W**

**Panopthalmitis disorder (TM2)**

"redness, pain, swelling in conjunctiva involving entire eye.

(AYU) vitiation of all the three dosha affecting the eye""

(SID) It is explained by increased Vaḷi, Aḷal and Aiyam. Among the seven physical constituents Cāram and Cennīr are affected.

(UNA) excessive moistness in the eye, infiltration of morbid matter towards eye."

**SK6X**

**Phthisis bulbi disorder (TM2)**

"shrinkage of eyeball, may be associated with pain, ulceration, adhesion of eyelids, loss of vision

(AYU) aggravation of vata affecting the eyeball.

(UNA) dryness of eye humours."

**SK7Y**

**Other specified eye disorders (TM2)**

**SK7Z**

**Eye disorders (TM2), unspecified**

**Ear disorders (TM2) (SK80-SK8Z)**

**SK80**

**Ear abscess disorder (TM2)**

painful suppurative swelling in the ear region

[AYU]aggravation of pitta affecting skin, fat, muscle tissue in the ear region resulting in swelling and suppuration.

[SID] It is explained by increased Aḷal. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

[UNA] collection of morbid matter in the ear region leading to loss of continuity

**SK81**

**Deafness disorder (TM2)**

Impaired/complete loss of hearing

[AYU] It is caused due to all three dosha mainly vata affecting the hearing faculties.

(SID) It is explained by increased Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu are affected.

[UNA] It is either congenital or due to old age or derangement of temperament of organs of hearing.

**SK82**

**Otorrhoea disorder (TM2)**

Pain in the ear, purulent discharge from ear

[AYU] It is caused due any of the three dosha localising in the ear

[SID] It is explained by increase in Aṣal and aiyam . Among the physical constituents Cāram and Cennīr are affected

[UNA] It is caused due to the predominance of moistness.

**SK83**

**Pruritus of ear disorder (TM2)**

"Itching sensation in the ear

(AYU) It is caused due to increased kapha localising in ear.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram and Cennīr is affected.

(UNA) It is caused by predominance of Ṣafrā', predominance of Rṭh in the ear, and diversion of saline fluids towards ear."

**SK84**

**Dysacusia disorder (TM2)**

intolerance to loud sounds.

[AYU] increased vata, pitta leading to hypersensitivity of ear.

[UNA] It is caused by weakness of the hearing faculties.

**SK85**

**Impacted cerumen disorder (TM2)**

the wax in the ear becomes viscous and hard thereby causing hindrance in hearing.

[AYU] vitiation of kapha, vata affecting karna.

[UNA] increased viscosity of moist bodies in the ear.

**SK86**

**Tinnitus disorder (TM2)**

Ringling sounds in ear may be continuous or intermittent

[AYU] It is caused due to vata affecting the channels carrying the sound.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḷuppu are affected.

[UNA] It is caused by general weakness, under nourishment, congestion of head with fluids and morbid material ,weakness of the hearing faculties, presence of wax in the ear, etc.

**SK87**

**Otalgia disorder (TM2)**

ear ache. May be associated with headache, coryza.

[AYU] vitiation of vata affecting ear.

[SID] It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected.

[UNA] Accumulation of hot secretions and hot Riyāḥ in the ear.

**SK88**

**Otitis disorder (TM2)**

earache, burning sensation, pain in forehead, redness in face. May be associated with vertigo.

[AYU] vitiation of all the three dosha affecting skin, blood, muscle tissue of the ear.

[SID] It is explained by decrease in Aiyam and increase in Vali causing dizziness. Among the seven physical constituents Cāram gets affected.

[UNA] Impaired hot or impaired cold temperament, infiltration of secretion at the site.

**SK89**

**Pustules of pinna disorder (TM2)**

small pustular eruptions over the external ear.

[AYU] It is caused by vitiated kapha and blood localising over the external ear.

[SID] It is explained by increased Azal. Among the seven physical constituents Cāram and Cennīr gets affected.

[UNA] It is caused by the derangement of Dam mixed with fluids.

**SK8Y**

**Other specified ear disorders (TM2)**

**SK8Z**

**Ear disorders (TM2), unspecified**

**Nose disorders (TM2) (SK90-SK9Z)**

**SK90**

**Epistaxis disorder (TM2)**

Bleeding from nose.

[AYU] It is caused by increased pitta vitiating the blood.

[SID] It is explained by increased Azal. Among the seven physical constituents Cāram, Cennīr are affected.

[UNA] It is caused by due to extreme congestion, Increased heat of Dam and Predominance of Šafrā'.

**SK91**

**Anosmia disorder (TM2)**

decreased or loss of smell

[AYU] vata, kapha blocking nasal passages

[SID]

[UNA] Blockage of nasal passage and cribriform plate of ethmoid bone with thick viscous humour

**SK92**

**Dry nose disorder (TM2)**

Dry nose, nasal obstruction, crusting, scabs in nose

[AYU] It is caused by increased vata inside the nasal cavity.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu are affected.

[UNA] It is caused by predominance of matter related to Balgham which gets dried in the nasal cavity.

**SK93**

**Atrophic rhinitis disorder (TM2)**

Dryness of nose, loss of smell, wasting of mucous membrane

[AYU] It is caused by increased vata drying up the kapha in the nose

[UNA] It is caused by the predominance of coldness in the nasal cavity.

**SK94**

**Nasal polyp disorder (TM2)**

Growth in nasal mucosa, nasal obstruction, nasal tone of voice, pain, discharge from the nose

[AYU] It is caused by vitiated dosha affecting the mucosa, muscle and adipose tissue in the nose

(SID) It is explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr and Ūṇ get affected.

[UNA] It is caused by the accumulation of Dam mixed with Sawdā' in the vessels

**SK95**

**Rhinitis disorder (TM2)**

swelling, redness of nasal mucosa, moistness and watery discharge, pain, loss of smell

[AYU] It is caused by increased vata pushing the kapha outwards through the nose

(SID) It is explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ and Kozuppu gets affected

[UNA] It is caused by the derangement of temperament and humours in the nose

**SK96**

**Coryza and catarrh disorder (TM2)**

Watery discharge from the nose may be associated with loss of smell

[AYU] It is caused due to kapha and vata.

(SID) It is explained by increased Aḡal. Among the seven physical constituents, Cāram, Cennīr are affected.

[UNA] It is caused by derangement of temperament of brain and congestion and accumulation of humours in the body leading to the formation and movement of Rīḥ from body towards brain.

**SK97**

**Nasal obstruction disorder (TM2)**

Obstruction of the nasal passage, burning sensation, frequent mucosal secretions, nasal tone of voice

[AYU] It is caused due to vata and kapha causing obstruction in the nose

[SID] It is explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ and Koḻuppu are affected.

[UNA] It is caused by obstruction of nasal passage due to viscous humour or fleshy growth or crust of wounds

**SK98**

**Ozaena disorder (TM2)**

Bad odour from the nose may be associated with bad breadth

[AYU] It is caused by all the three dosha affecting the nose and palate

[SID] It is explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ and Koḻuppu gets affected.

[UNA] It is caused by accumulation of putrefied humours in the nose

**SK99**

**Sinusitis disorder (TM2)**

"Inflammation of mucous membrane of nose and para nasal sinuses, headache, heaviness of face, forehead and head, nasal discharge, nasal obstruction, post nasal drip, nasal voice, hyposmia/anosmia

(SID) It may be explained by Aiyam increasing and affecting the Vaḷi and Aḻal.

(UNA) It is caused by cold impaired temperament of brain as a result of various external factors e.g. exposure to cold water, cold air, etc. It may also be caused by collection of Putrified matter in and around the olfactory organs."

**SK9A**

**Adenoiditis disorder (TM2)**

"Nodular swelling in the throat, irritation

(AYU) It is caused due to vitiated kapha localising the throat

(UNA) It is caused by the predominance of Dam"

**SK9Y**

**Other specified nose disorders (TM2)**

**SK9Z**

**Nose disorders (TM2), unspecified**

**Neck and throat disorders (TM2) (SL00-SL0Z)**

**SL00**

**Throat tumour disorder (TM2)**

Non suppurated swelling at the root of the tongue and beginning of the throat, non-suppurative swelling, stable/immobile swelling, painless swelling and reddish swelling, abscess with pus in throat. [AYU] It is due to vitiated three dosha affecting the throat. [SID] It may be explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Koḻuppu, Eṇpu, Mūlai, Cukkilaṁ, Curōṇitaṁ are affected.

**SL01**

**Retropharyngeal abscess disorder (TM2)**

suppurative growth, painful obstruction of posterior part of pharynx associated with multiple fleshy buds and fever

[AYU]aggravation of kapha, pitta resulting in painful suppurative swelling in the posterior part of pharynx.

[UNA] non-resolution of morbid matter of hot inflammation in the posterior part of pharynx.

**SL02**

**Hoarseness of voice disorder (TM2)**

Change in the character of voice making it harsh and husky, feeling of roughness and irritation of throat

[AYU] It is caused due to vitiated vata affecting the speech faculties

[SID] It may be explained by Aiyam increased and affect the Vaḷi especially Vayu for upward biological movements

[UNA] It is caused by simple hot/simple cold/simple wet/simple dry impaired temperament of larynx and trachea, air pollution, excessive and prolonged shouting and diseases of neighboring organs of larynx.

**SL03**

**Indistinct- abnormal voice disorder (TM2)**

Abnormal quality,pitch or volume of voice

[AYU] It is caused due to vitiated dosha affecting the speech faculties

[SID]

[UNA] It is caused by derangement of temperament either simple or involving matter, constitutional derangement, inflammation, injury and pain. sometimes the cause of defect in voice lies in the larynx itself or the nerves attached to it.

**SL04**

**Severe throat inflammation disorder (TM2)**

Inflammation of throat, difficulty in swallowing and dry cough.

[AYU] It is caused by vitiation of all the three dosha which localise near the base of the tongue

[SID] It may be explained by increased Aiyam followed by Vaḷi. Among seven physical constituents, Cāram and Cennīr are affected.

[UNA] It is caused by the accumulation of putrefied matter in the throat, weakness of the all faculites of body.

**SL05**

**Pharyngitis disorder (TM2)**

pain, swelling redness in throat, cough and dysphonia.

[AYU] vitiation of kapha, blood and muscle tissu in palate region

[SID] It is explained by increased Azaḷ. Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected.

[UNA] It is caused by impaired temperament, presence of any irritant substance in pharynx

**SL06**

**Tonsillitis disorder (TM2)**

The inflammation of tonsils, characterized by swelling, pain and redness of throat, difficulty in swallowing, fever.

(AYU) It is caused by vitiated kapha and blood affecting the throat region.

(SID) It is explained by increased Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu are affected.

(UNA) It is caused by derangement of any of the four humours.

**SL07**

**Speech disorder (TM2)**

"This disorder is characterised by inability to speak.

(AYU) It is caused by vata and kapha dosha affecting speech faculties.

(UNA) It is caused by moist and dry impaired temperament or damage to larynx or laryngeal muscles."

**SL08**

**Lymphadenopathy in throat region disorder (TM2)**

"String of hard, glossy, painless nodular or elongated skin coloured swollen glands around the neck, throat which with slowly suppure and form fistulous tracts.

(AYU) vitiation of kapha, blood, muscle tissue in throat region.

(SID) It is explained by derangement of Vali, Aṣal and Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu get affected.

(UNA) putrified Dam and other matters. "

**SL09**

**Laryngitis disorder (TM2)**

"pain, redness, hoarseness of voice

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) derangement of Dam, Balgham, Ṣafrā, 'Sawdā' "

**SL0Y**

**Other specified neck and throat disorders (TM2)**

**SL0Z**

**Neck and throat disorders (TM2), unspecified**

**SL20**

**Excessive sneezing disorder (TM2)**

Excessive sneezing

(AYU) It is caused by vitiated vata and kapha.

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram, Cennīr are affected.

(UNA) It is caused by impaired temperament of brain.

**SL21**

**Hypernasal speech disorder (TM2)**

hypernasal voice leading to nasal twang

[AYU] obstruction to oral, nasal passages, vitiation of vata.

(SID) It is explained by increased Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu are affected.

[UNA] flow of secretion from the brain towards nose.

**SL2Y**

**Other specified eye, ear, nose, throat and neck disorders (TM2)**

**SL2Z**

**Eye, ear, nose, throat and neck disorders (TM2), unspecified**

**Respiratory system disorders (TM2) (SL40-SL4Z)**

**SL40**

**Bronchial asthma disorder (TM2)**

"difficult rapid respiration, tightness of chest, wheezing, cough with difficulty to expel sputum.

[AYU] obstruction of respiratory passages due to vitiation of kapha and vata

[SID] it is caused by increased by Aiyam and Vali. Uṭṭātūkkal, Cāram, Cennīr, Ūṇ, Kozuppu gets affected.

[UNA] infiltration of Balgam towards bronchiols, absorption of thick viscous Balgham."

**SL41**

**Cough disorder (TM2)**

"Cough

[AYU] It is caused due to vitiated kapha and vata affecting the respiratory channels.

[SID] It may be explained by increased Aiyam and affect Vayu for upward biological movements

[UNA] It is caused by derangement of temperament either simple or involving matter."

**SL42**

**Dyspnoea disorder (TM2)**

"Pain and tightness in the chest, breathlessness,

[AYU] It is caused by obstruction to the channels of respiration by vata and kapha

[SID] It may be explained by Aiyam affected and increased Vayu for upward biological movements

[UNA] It is caused by predominance of hotness on heart and disturbance of motor functions of the respiratory system."

**SL4Y**

**Other specified respiratory system disorders (TM2)**

**SL4Z**

**Respiratory system disorders (TM2), unspecified**

## Heart, blood and circulatory disorders (TM2) (SL60-SM0Z)

### Heart disorders (TM2) (SL60-SL6Z)

#### SL60

##### **Slow heart disorder (TM2)**

"decreased heart rate may be associated with decreased heart function.

(AYU) vitiated vata affecting pitta for intellect.

(UNA) weakness of vital power"

#### SL61

##### **Heart pain disorder (TM2)**

"Chest pain, discomfort, palpitation, fatigue, dyspnoea, swelling and coldness of lower limbs

(AYU) It is caused by vitiated dosha affected primary product of digested food further affecting the heart.

(SID) It is explained by increased Vali and Azal that affect Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu gets affected.

(UNA) It is caused by impaired temperament of heart or predominance of morbid humors "

#### SL62

##### **Palpitation disorder (TM2)**

"feeling of increased beating of the heart which is within the notice of the patient with or without tachycardia.

(AYU) vitiation of vata affecting the heart region.

(SID) It is explained by increased Azal. Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected.

(UNA) caused by hot or cold simple morbid temperament, excess of Dam or Bukhārāt arising from Sawdā' and reaching to the heart."

#### SL6Y

##### **Other specified heart disorders (TM2)**

#### SL6Z

##### **Heart disorders (TM2), unspecified**

### Circulatory disorders (TM2) (SL70-SL7Z)

#### SL70

##### **Varicose veins disorder (TM2)**

"visible twisted and swollen veins of the legs and feet may be associated with swelling and heaviness in the legs, itching, skin discolouration, muscle cramps

(AYU) Aggravated vata causes tortuousness of veins.

(SID) It is explained by increase of Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu get affected.

(UNA) increased viscosity of Dam due to predominance of coldness or mixing of Balgham with it."

**SL71**

**Varicose ulcer disorder (TM2)**

"ulcer due to dilated and tortuous vein

(AYU )

(SID) It may be explained by increased Vali , Azal, Aiyam in combination. It affects both Cāram and Cennīr .

(UNA) It is caused by accumulation of Dam mixed with Sawdā', Dam or thick Dam mixed with Balgham in the veins of legs and feet"

**SL72**

**Thickened arteries disorder (TM2)**

"Dry skin, feeling of heaviness, cold extremities.

(AYU) Accumulation of kapha and medas in the vessels.

(SID) It is explained by increased Vali and Aiyam.

(UNA) Abnormal accumulation of Balgham."

**SL7Y**

**Other specified circulatory disorders (TM2)**

**SL7Z**

**Circulatory disorders (TM2), unspecified**

**Blood related disorders (TM2) (SL80-SL8Z)**

**SL80**

**Anaemia disorder (TM2)**

"pallor, fatigue, aversion to cold and palpitation.

(AYU) vitiated pitta or kapha which further vitiates the blood resulting in pallor of the skin.

(SID) It is explained by increase of Azal, derangement of Vayu for circulation and increase of Aiyam in later stage. Among the seven physical constituents Cāram and Cennīr are affected.

(UNA) derangement of temperament of liver."

**SL81**

**Bleeding disorder disorder (TM2)**

"Bleeding from body orifices or beneath the skin.

(AYU) The condition results due aggravated pitta which brings about excitement of the blood, propelling it through the body orifices.

(SID) It is explained by increased Azal followed by Aiyam. Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected.

(UNA) It is caused by some specific type of fevers due to unhygienic conditions, and derangement of Dam."

**SL8Y**

**Other specified blood related disorders (TM2)**

**SL8Z**

**Blood related disorders (TM2), unspecified**

**SM00****Lymphadenopathy disorder (TM2)**

"inflammatory swelling associated with mild pain; usually occurs in axilla and groin.

(AYU) It is caused by accumulation of vitiated adipose tissue in various parts of the body

(SID) It is explained by increased Azāl and decreased Valī and Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu get affected. "

**SM01****Elephantiasis disorder (TM2)**

"A disorder characterized by non-pitting swelling of legs, unilateral or bilateral, Swollen glands in groin. It may be associated with fever.

(AYU) It may be explained by the vitiation of flesh, kapha and blood.

(SID) It may be explained by the sea and its habitat, impure or contaminated water, consumption of Aiyam aggravating food substances, frequent intercourse, impaired lymphatic supply to lowerlimb. It is explained by increased Valī associated with Aiyam. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) It may be explained by infiltration of burnt, viscous Dam towards legs."

**SM0Y****Other specified heart, blood and circulatory disorders (TM2)****SM0Z****Heart, blood and circulatory disorders (TM2), unspecified****Gastro-intestinal disorders (TM2) (SM10-SM7Z)****Oral cavity disorders (TM2) (SM10-SM1Z)****SM10****Stomatitis disorder (TM2)**

"Ulcer in the mouth, tongue and spread towards oesophagus and stomach

(AYU) It is caused due to increased pitta

(SID) It is explained by increased Azāl. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu are affected

(UNA) It is due to accumulation of morbid humors"

**SM11****Dental abscess disorder (TM2)**

"painful suppurative swelling around teeth

(AYU)aggravation of pitta affecting skin, fat, muscle tissue around the tooth resulting in swelling and suppuration.

(SID) It is explained by increased Azāl causing increased Valī. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Eṇpu gets affected.

(UNA) collection of morbid matter in the teeth region."

**SM12**

**Bruxism disorder (TM2)**

"Grinding of teeth during sleep.

(AYU) vitiation of vata, kapha affecting oral cavity.

(UNA) predominance of morbid humour in brain which causes its irritation, worm infestation, weakness of jaw muscles."

**SM13**

**Pyorrhoea disorder (TM2)**

foul smelling breath loose teeth with pain, swollen gums, bleeding, pus.

(AYU) vitiated blood affecting the roots of teeth.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, Eṇṇu are affected.

(UNA) excess of local moistness, bad hygeinic condition of teeth.

**SM14**

**Gingivitis disorder (TM2)**

"swelling, pain in the gums

(AYU) vitiated blood affecting the roots of teeth.

(SID) It is explained by increased Aḷal and Vali. Among the seven physical constituents there is increased activity of Cennīr.

(UNA) predominance of Dam, Ṣafrā' and Balgham in the gum leading to inflammation. "

**SM15**

**Halitosis disorder (TM2)**

"putrid odour in the mouth,

(AYU) vitiated kapha, pitta, blood affecting teeth and gums.

(SID) It may be explained by increased Vaḷi and increased Aḷal kutram. Among physical constituents Cāram, Cennīr, Ūṇ and Kozuppu are affected.

(UNA) due to abnormal hotness and putrified Balgham in the stomach, ulcers of gums and dental caries"

**SM16**

**Sialorrhoea disorder (TM2)**

"Excessive salivation

(AYU) It is caused by increased kapha

(SID) This disequilibrium is characterised by the unusual combination of Aiyam and Vaḷi

(UNA) It is caused due to hot and wet impaired temperament of stomach."

**SM17**

**Palatitis disorder (TM2)**

pain, swelling and redness in the palate

(AYU) vitiation of kapha, blood, muscles in palate region.

(SID) It is explained by increased Aḷal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, are affected.

(UNA) derangement of Dam, Balgham, Ṣafrā', 'Sawdā'.

**SM18**

**Uvulitis disorder (TM2)**

large, painful swelling at the base of soft palate, uvula, fever, difficulty in swallowing.

(AYU) vitiation of pitta, blood affecting throat region.

(SID) It is explained by increased Azal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, are affected.

(UNA) infiltration of morbid humours viz., Dam, Balgham, Šafrā, 'Sawdā'.

**SM19**

**Ludwig's angina disorder (TM2)**

"pain, burning sensation in throat, fever, difficulty in breathing and swallowing due to swelling in pharynx and larynx or muscles of upper part of the oesophagus.

(AYU) vitiation of all the three dosha, blood, muscle in throat region.

(UNA) predominance of any of the four humours. "

**SM1A**

**Odontalgia disorder (TM2)**

"severe dental pain. May be associated with injury, infection.

(AYU) severe vitiation of vata, pitta affecting the teeth and gums.

(SID) It is explained by increased Azal humour. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Enbu are affected.

(UNA) hot impaired temperament with swelling, cold impaired temperament of teeth or its nerve, involvement of stomach/accumulation of putrified humours in the stomach. "

**SM1B**

**Bleeding gum disorder (TM2)**

"bleeding from gums, may be associated with ulcers

(AYU) vitiation of pitta, kapha and blood affecting the gums.

(SID) It is explained by deranged Vali humour. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) weakness of digestive power of gums. "

**SM1C**

**Ranula disorder (TM2)**

Cystic swelling either above or below the tongue.

(AYU) It is caused by vitiated all three dosha localising near the base of the tongue.

(SID) It is explained by increased Aiyam and decreased Azal. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) It is caused by predominance of Dam undersurface of the tongue.

**SM1D**

**Parotitis disorder (TM2)**

"pain, heaviness, burning sensation in the parotid region.

(AYU) vitiation of pitta, vata, kapha affecting root of the ear.

(UNA) derangement of Dam, Balgham, Šafrā, 'Sawdā' "

**SM1E****Dental caries disorder (TM2)**

"Decaying of tooth, tooth ache, breaking of teeth

(AYU) It is caused due to vitiated vata along with blood affecting the tooth.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Koḻuppu, Eṇpu and Mūlai are affected.

(UNA) It is caused due to old age, predominance of dryness and putrified humours"

**SM1F****Dental plaque disorder (TM2)**

"Yellow crust at the root of the teeth.

(AYU) It is caused due to vitiated dosha accumulating over the teeth

(SID) It is explained by increased Aḻal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḻuppu, and Eṇpu gets affected.

(UNA) It is caused by the deposition of viscous fluid from stomach and intestine in the mouth and teeth. The colour of deposits helps in identifying the predominant humour or causative humour. The crust is sometimes too hard to detach from the teeth."

**SM1G****Discolouration of teeth disorder (TM2)**

"Discolouration of teeth

(AYU) It is caused by vitiated blood and pitta affecting the teeth

(SID) It is explained by increased Vaḷi humour. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḻuppu, and Eṇpu gets affected.

(UNA) It is caused by the infiltration of morbid humours in the teeth"

**SM1H****Odontoseisis disorder (TM2)**

"Loosening of teeth

(AYU) It is caused due to vitiated vata affecting the tooth

(SID) It is explained by increased Vaḷi humour. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḻuppu and Eṇpu gets affected.

(UNA) It is caused by predominance of coldness and general debility of jaw muscles. "

**SM1J****Sensitive teeth disorder (TM2)**

"Increased sensitivity of teeth, loss of upper most covering

(AYU) It is caused due to vata

(SID) It is explained by increased Vaḷi humour. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḻuppu and Eṇpu gets affected.

(UNA) It is caused due the predominance of coldness in the teeth"

**SM1K**

**Lip chapping and bleeding disorder (TM2)**

Desquamation of lips. May be associated with bleeding, blistering.

(AYU) vitiation of vata, pitta affecting lips.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, are affected.

(UNA) Insufficiency of transformative faculty of lips accompanied with predominance of dryness in it.

**SM1L**

**Itchy swollen lip disorder (TM2)**

"swollen itchy lips.

(AYU) vitiation of kapha, vata affecting lips

(SID) It is explained by increased Aiyam. Among the physical constituents Cāram get affected. "

**SM1M**

**Dry chapped lip disorder (TM2)**

"chapped dry lips.

(AYU) vitiation of vata affecting the lips

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram is decreased.

(UNA) Insufficiency of transformative faculty of lips accompanied with predominance of dryness in it."

**SM1N**

**Xerostomia disorder (TM2)**

"dryness of the tongue. May be associated with dryness of mouth, bitterness, heartburn.

(AYU) vitiation of kapha, vata affecting the tongue.

(SID) It may be explained by increased Aḷal followed by increased Aiyam. Among physical constituents Cāram and Cennīr are affected.

(UNA) predominance of Ṣafrā' or presence of viscous matter on the surface of tongue."

**SM1P**

**Ageusia disorder (TM2)**

"loss of taste which may be associated with loss of smell, anorexia, increased secretion of saliva

(AYU) impairment of digestive and metabolic factors affecting kapha residing on the tongue.

(SID) It is explained by increased Aḷal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ and Kozuppu gets affected.

(UNA) predominance of moistness in the nerves supplying the tongue."

**SM1Y**

**Other specified oral cavity disorders (TM2)**

**SM1Z**

**Oral cavity disorders (TM2), unspecified**

## Abdominal cavity disorders (TM2) (SM30-SM3Z)

### SM30

#### **Haematemesis disorder (TM2)**

"Vomiting of blood accompanied with burning sensation in abdomen.

(SID) It may be explained by increased Aṣal followed by increased aiyam. Among seven physical constituents, Cāram and Cennīr are affected.

(UNA) presence of acrid matter in the stomach, weakness of the vessels, congestion in the stomach"

### SM31

#### **Abdominal distension disorder (TM2)**

"distension of abdomen, flatulence, gurgling sounds, heaviness may be associated with pain, dyspepsia, constipation and dysuria.

(AYU)aggravation of Descending vata affecting the excretory functions.

(SID) It is explained by increased Aiyam along with Vaḷi. Aṣal gets decreased. Among the seven physical constituents Cāram, and Cennīr gets affected.

(UNA) accumulation of Riyāḥ in stomach."

### SM32

#### **Ascites disorder (TM2)**

"abnormal swelling of the abdomen due to the collection of fluid in abdominal cavity. May be associated with distension, pain, lack of appetite, general weakness.

(AYU) weak digestive and metabolic factors leading to vitiation of water carrying channels with the involvement of all the dosha.

(SID) It is explained by the derangement of Mukkurram. Among the seven physical constituents, Cāram, Cennīr, Ūṇ , Kozuppu are affected.

(UNA) impaired cold temperament of liver, weakness of hepatic powers."

### SM33

#### **Abdominal pain disorder (TM2)**

"Pain in abdomen, burning sensation, distension and flatulence

(AYU) It is caused due to vitiated dosha especially vata affecting the abdominal organs.

(SID) It is explained by increased Vaḷi and Aṣal. Among seven physical constituents Cāram, Cennīr gets affected.

(UNA) It is caused due to simple or substance associated impaired temperament or inflammatory condition of the stomach, weakness of stomach."

### SM34

#### **Constipation disorder (TM2)**

"not passing or difficulty in passing the stools, bloating with or without pain abdomen

(AYU) vitiated digestive and metabolic factors resulting sluggishness of vata.

(SID) It may be explained by increased Vaḷi and Aṣal. Among seven physical constituents, Cāram affected.

(UNA) predominance of dryness in the intestine, weakness of repulsive power of intestine."

**SM35**

**Volvulus disorder (TM2)**

"Retention of feces, non passing of flatus, urine, severe abdominal pain

(AYU) severe vitiation of vata leading to impaired function of stomach and intestines.

(SID) It is explained by increased Vali and Aṣal. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) constitutional derangement of intestine due to sudden strain. "

**SM36**

**Malabsorption disorder (TM2)**

"Indigestion, passing of stools mixed with undigested food, sour eructation

(AYU) It is caused by any of the three dosha localising in the duodenal regions

(SID) It may be explained by Increased Aṣal causing derangement of Vayu for downward biological movements

(UNA) It is caused by weak retentive faculty or strong expulsive faculty of the intestine."

**SM37**

**Diarrhoea disorder (TM2)**

"Passage of loose stools may or may not be mixed with blood and pus

(AYU) It is caused by weakness of digestive and metabolic factors followed by increased vata moving the watery components downwards in the intestine.

(SID) It is explained by decreased Aṣal and increased Vali and Aiyam. Among seven physical constituents, Cāram, Cennīr , Ūṇ, Kozuppu gets affected.

(UNA) It is caused by cold or hot impaired temperament of the intestine, predominance of Sawdā' in the intestine"

**SM38**

**Dysentery disorder (TM2)**

"Frequent passage of stools which may be associated with blood or mucus, tenesmus.

(AYU) It is caused by increased vata pushing the acculumated kapha downwards through the intestinal tract.

(SID) It may be explained by Increased Aṣal causing derangement of Vayu for downward biological movements. Among the seven physical constituents Cāram, Cennīr, and Ūṇ gets affected.

(UNA) It occurs to expel the infiltrated Ṣafrā' and saline Balgham from intestines and caused by predominance of matter related to Ṣafrā', Balgham and Riḥ."

**SM39**

**Dyspepsia disorder (TM2)**

"indigestion, burning sensation in chest, throat and epigastriun, sour eructation nausea

(AYU) It is caused by the alteration in quality of pitta.

(SID) It is explained by increased Vali with Aṣal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu and Enṇu gets affected.

(UNA) It is caused by putrefaction of food in the stomach and weakness of stomach."

**SM3A****Hyperacidity disorder (TM2)**

"Burning sensation in the chest.

(SID) It is explained by increased *Aṣal*. Among the seven physical constituents, *Cāram*, *Cennīr* and *Ūṇ*, gets affected.

(UNA) It is caused by the retention of immature fluids on the cardiac end of stomach, pouring of *Sawdā'* on the stomach"

**SM3B****Indigestion disorder (TM2)**

"difficulty to digest food. May be associated with stomach pain, bloating, belching, hiccup,

(AYU) vitiation of digestion by *kapha*, *pitta* or *vata*.

(SID) It is explained by derangement of *Vayu* for upward biological movements and *Vayu* for downward biological movements

(UNA) impaired temperament of stomach, accumulation of humours in the stomach or any inflammatory condition"

**SM3C****Food stasis indigestion disorder (TM2)**

"marked distension of abdomen, the undigested food remains in the stomach without getting evacuated from the body either by vomiting or by defecation

(AYU) loss of functionality of *vata* in stomach region.

(SID) It is explained by increased *Aiyam* along with *Vali*. *Aṣal* gets decreased. Among the seven physical constituents, *Cāram* and *Cennīr* gets affected.

(UNA) impaired temperament of the stomach, accumulation/infiltration of morbid matter in stomach, weakness of stomach muscles."

**SM3D****Duodenal ulcer disorder (TM2)**

"stabbing or piercing pain in the abdomen which is felt during digestion of food. May be associated with indigestion, flatulence, nausea, depression, insomnia, diarrhoea, pricking pain in the sides of the chest, false appetite and fever.

(AYU) impairment of digestive and metabolic factors, vitated *vata*, *pitta*.

(SID) It is explained by increase in *Vali* which stimulates the *Vayu* for downward biological movements, *Vayu* for circulation and *Vayu* for homeostasis. Among seven physical constituents, *Cāram*, *Cennīr*, are affected "

**SM3E****Gastric ulcer disorder (TM2)**

"epigastric, abdominal pain before and after food intake. May be associated with excessive salivary secretion, headache, , sweating frequent belching with sour/foul smell, nausea, vomiting, stomatitis, diarrhoea

(AYU) impairment of digestive and metabolic factors, vitated *vata*, *pitta*.

(SID) It is explained by excessive *Aṣal*. Among seven physical constituents, *Cāram*, *Cennīr*, *Ūṇ*, *Kozuppu*, and *Enpu* are affected.

(UNA) infiltration of humour or acid or irritant humours from brain"

**SM3F**

**Gastritis disorder (TM2)**

"severe pain on empty stomach, heartburn, epigastric pain, thirst. May be associated with nausea, vomiting, giddiness, constipation

(AYU) impairment of digestive and metabolic factors, vitated vata, pitta and kapha.

(SID) It is explained by excessive Aḡal. Among seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, and Eṇpu are affected.

(UNA) predominance of Dam, Balgham, Ṣafrā' or Sawdā'"

**SM3G**

**Hernia disorder (TM2)**

"Protrusion of an organ or a part of the organ through an abnormal opening from the abdominal cavity to outside

(AYU) laxity of abdominal muscles due to excess pitta, vata.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) It can be caused by increased abdominal pressure leading to loss of continuity of structures or injury."

**SM3H**

**Nausea disorder (TM2)**

feeling of nausea, water brash, distress in the cardiac area

(AYU) decreased digestive fever, increased salty kapha and vata.

(SID) It is explained by increased Aiyam and decreased Aḡal. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) accumulation of morbid matter in the stomach.

**SM3J**

**Retching disorder (TM2)**

"feeling of vomiting, eructation with loud sounds without any expulsion of gastric contents.

(AYU) vitiation of vata affecting stomach

(SID) It is caused by increased Vaḷi stimulating the Aḡal. Among the seven physical constituents, Cāram, senner and Ūṇ get affected.

(UNA) It is caused by the accumulation of morbid humours specially Ṣafrā' inside the stomach"

**SM3K**

**Abdominal lumps disorder (TM2)**

"moving lump like swelling in the abdomen of various sizes and characters associated with abdominal pain, distension.

(AYU) vitiation of digestive and metabolic factors, all the three dosha affecting stomach and intestines.

(SID) It may be explained by increased Vayu for upward biological movements, Vayu for downward biological movements and Vayu for homeostasis. "

**SM3L****Vomiting disorder (TM2)**

"excessive vomiting.

(AYU) weak digestive and metabolic factors, leading to primary product of digested food being vitiated by pitta, kapha and vata.

(SID) It is caused by decreased Aṣal and increased Aiyam in stomach and consequent derangement of Vayu for upward biological movements and Vayu for downward biological movements.

(UNA) It is caused by the predominance of Humours, intake of bad quality food, irregularities in food intake, derangement of temperament of stomach, debility or weakness of stomach, in the critical phase of acute diseases."

**SM3Y****Other specified abdominal cavity disorders (TM2)****SM3Z****Abdominal cavity disorders (TM2), unspecified****Liver and Spleen disorders (TM2) (SM40-SM4Z)****SM40****Liver abscess disorder (TM2)**

"heaviness, tenderness at the site of the liver, associated with loss of appetite, breathlessness, hiccoughs, restlessness, high fever, pain, redness of face and eyes.

(AYU) aggravation of pitta resulting in painful suppurative swelling in the liver

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr affected initially and then Ūṇ, Kozuppu gets affected.

(UNA) non-resolution of morbid matter of hot inflammation in the liver"

**SM41****Jaundice disorder (TM2)**

"yellowish discoloration of skin, eyes, nails, urine and feces associated with loss of appetite, fatigue and bilious vomiting

(AYU) weak digestive and metabolic factors, vitiation of pitta and blood affecting liver

(SID) It is explained by increased Vaḷi (Vayu for circulation ) influencing Aṣal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, and Kozuppu are affected.

(UNA) It is caused by accumulation of uninfected Ṣafrā' near the skin, deviation of thin Ṣafrā' towards skin as a form of crisis"

**SM42**

**Hepatomegaly disorder (TM2)**

"enlargement of liver associated with constitutional symptoms viz., anorexia, nausea, vomiting, weakness, blackish discolouration, breathlessness.

(AYU) vitiation of blood and pitta affecting the liver

(SID) It is explained by increased Vayu for circulation, Vayu for respiration and digestion and Azal . Among the seven physical constituents, Cāram, Cennīr, Ūṇ and Koṣuppu, Mulai and Cukkilam gets affected.

(UNA) It is caused by constitutional derangement of structure of organ due to accumulation of morbid humours in the liver for a long period of time."

**SM43**

**Hepatitis disorder (TM2)**

"pain and heaviness in the abdomen, may be associated with loss of appetite, nausea and vomiting, increased body weight, feeling of mobility all over the body.

(SID) It is explained by increased Vali along with Azal. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) predominance of morbid humours viz., Dam, Balgham, Śafrā, 'Sawdā'"

**SM44**

**Splenomegaly disorder (TM2)**

"Enlargement of spleen.

(AYU) due to dislodgement of spleen from its site due to over-exertion and related causes or enlargement of spleen due to aggravation of blood.

(SID) It is explained by increased Vali, Azal and iyam . Among the seven physical constituents Cāram, Cennīr, Ūṇ ,Koṣuppu gets affected.

(UNA) It is caused by accumulation of morbid humours in the spleen for a long period of time."

**SM4Y**

**Other specified liver and Spleen disorders (TM2)**

**SM4Z**

**Liver and Spleen disorders (TM2), unspecified**

**Anorectal disorders (TM2) (SM50-SM5Z)**

**SM50**

**Proctalgia disorder (TM2)**

"pain in the anal region radiating to rest of perineum and lower back.

(AYU) Severe vitiation of Descending vata affecting the anal region.

(SID) It is explained by increased Vali. Among seven physical constituents Cāram and Cennīr gets affected. "

**SM51****Anal fissure disorder (TM2)**

cutting type of pain with burning sensation in anal region, streak like blood mixed stools. May be associated with radiating pain to umbilicus, genitals, bladder.

(AYU) Injury, deranged digestive and metabolic factors leading to vitiation of skin, blood, muscle, fat tissue.

(SID) It is explained by increased *Vaḷi* and *Aḷal*. Among the seven physical constituents *Cāram*, *Cennīr*, *Ūṇ*, *Kozuppu*, are affected.

(UNA) predominance of hotness and dryness, passage of hard stool from it, expulsion of irritant humour through purgation, injury to the anal orifice and external cold environment.

**SM52****Fistula in ano disorder (TM2)**

"opening in the skin near the anus having communication with the rectum due to deep and severe ulcers of rectum. May be associated with pain, passing of fecal matter and gases through the track.

(AYU) injury, deranged digestive and metabolic factors leading to vitiation of skin, blood, muscle, fat tissue

(SID) It is explained by increased *Vayu* for downward biological movements. Among the seven physical constituents, *Cāram*, *Cennīr* and *Ūṇ* gets affected

(UNA) Presence of irritating matter in the area with weakness of body powers and non elimination of morbid matter from affected area."

**SM53****Haemorrhoids disorder (TM2)**

"Swollen and inflamed veins in the rectum and anus. May be associated with itching, pain, discomfort and bleeding.

(AYU) decreased digestive and metabolic factors, vitiation of *vata*, *kapha*, *pitta* affecting muscle, fat tissue.

(SID) It may be explained by increased *Vayu* for downward biological movements and affect the *Aḷal*

(UNA) It is caused by accumulation of *Dam* mixed with *Sawdā'* at the site"

**SM54****Proctitis disorder (TM2)**

Redness, swelling in anal region

(AYU) It is caused due to vitiated *pitta* localising in the anal region.

(SID) It is explained by increased *Vaḷi* and *Aḷal*. Among the seven physical constituents *Cāram*, *Cennīr*, *Ūṇ*, *Kozuppu*, are affected.

(UNA) It is caused by predominance of *Dam*, *Dam* mixed with *Ṣafrā'* or humours of cold temperament.

**SM55**

**Rectal prolapse disorder (TM2)**

"Rectum or a part of rectum descending through the anus, inflammation of the rectal muscles

(AYU) It is caused due to vitiated vata affecting the rectal region

(SID) It is explained by increased Vali. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, and Kozuppu get affected.

(UNA) It is caused by due to predominance of coldness and impairment of any of the four humors leading to paresis of sphincter muscles and inflammation of the rectal muscles"

**SM56**

**Anal abscess disorder (TM2)**

"painful suppurative swelling in anal region which may be associated with ulceration, painful defecation.

(AYU)aggravation of pitta affecting skin, fat, muscle tissue in the anal region resulting in swelling and suppuration.

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr affected initially and then Ūṇ, Kozuppu gets affected.

(UNA) collection of morbid matter due to impairment of body powers"

**SM5Y**

**Other specified anorectal disorders (TM2)**

**SM5Z**

**Anorectal disorders (TM2), unspecified**

**SM70**

**Flank pain disorder (TM2)**

"Severe pain in both flanks. May be associated with restlessness, abdominal discomfort, lack of appetite, sleeplessness.

(AYU) deranged digestive and metabolic factors, vitiated kapha, pitta and vata affecting the flanks.

(SID) It is explained by increased Vali. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Eṇpu gets affected.

(UNA) Accumulation of acrid Dam or thick Balgham at the site. "

**SM71**

**Anorexia disorder (TM2)**

loss of appetite

(AYU ) caused due to vitiated dosha affecting the digestive and metabolic factors.

(SID) It is explained by increased Vali and Aṣal. Among the seven physical constituents, Cāram are affected.

(UNA) weakness of all faculties of liver and stomach, accumulation of Ṣafrā', saline Balgham, putrified humours, raw humours in stomach.

**SM72****Bowel inflammation disorder (TM2)**

"passing of blood mixed stools, pain, heaviness in anal region accompanied with the discharge of mucilaginous material and colicky abdominal pain.

(AYU) vitated pitta, blood affects the Descending vata.

(SID) It is explained by increased Vaḷi along with Aḡal. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) accumulation of morbid humours in the intestine, infiltration of acrid Ṣafrā' and salty Balgham in intestine. "

**SM73****Infantile tenesmus disorder (TM2)**

"Undigested foul smelling stools associated with gripping pain, abdominal distension, convulsive movements of body.

(AYU) it is caused due to indigestion resulting from vitiation of breastmilk in the mother by all the three dosha

(SID) It may be explained by Aḡal increases and affect the aiyam due to breastfeeding child by the mother who often afflicted to indigestion and fever due to excess consumption of hard foods

(UNA) It is caused due to excessive production of Rīḥ as a result of excessive intake of milk or decrease in the quality of milk"

**SM74****Hiccough disorder (TM2)**

"uncontrolled hiccoughs. May be associated with dryness of tongue, throat, bitter sensation in mouth and thirst.

(AYU) vitiation of Kindling vata, Descending vata.

(SID) It is caused by increase of Aiyam in stomach and stimulation of Vayu for upward biological movements.

(UNA) It is caused by cold derranged temperament of stomach, injury irritation and dryness of cardiac end of the stomach, excessive evacuation, starvation, large quantity of ingested food irritating the cardiac end of stomach, intake of sour and spicy food, abnormal qualitative change in the ingested food and secondary to other disease of the stomach. "

**SM75****Dynamic intestinal obstruction disorder (TM2)**

severe abdominal colicky pain, projectile vomiting with gastrointestinal contents

(AYU) reversal of Kindling vata, Descending vata functions.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, are affected.

(UNA) obstruction of intestine by thick viscous matter and Rīḥ.

**SM76****Severe vomiting and diarrhoea disorder (TM2)**

"profuse vomiting and diarrhoea, thirst, cold extremities

(AYU) Impairment of digestive & metabolic factors resulting in expulsion of products resulting from incomplete digestion, transformation or metabolism from upper and lower orifice.

(SID) Caused by the polluted wind during the month of Mid-July to Mid-October with the seasonal alteration. It is explained by the increased Aiyam associated with Vaḷi and Aḻal. Among the seven physical constituents, Cāram, Cennīr, and Ūṇ get affected.

(UNA) It is caused by derangement of any of the four humours, decomposition of food."

**Exclusions:** Diarrhoea disorder (TM2) (SM37)  
Cholera (1A00)

**SM7Y****Other specified gastro-intestinal disorders (TM2)****SM7Z****Gastro-intestinal disorders (TM2), unspecified**

## Urinary and reproductive system disorders (TM2) (SM80-SN3Z)

### Urinary system disorders (TM2) (SM80-SM8Z)

**SM80****Renal abscess disorder (TM2)**

"burning micturition, hematuria, pus discharge, rigors, chills and fever

(AYU) aggravation of pitta affecting kidney.

(SID) It is explained by increased Aḻal. Among the seven physical constituents Cāram, Cennīr affected initially and then Ūṇ, Kozuppu gets affected..

(UNA) non-resolution of morbid matter of hot inflammation resulting in renal abscess or consequence and complication of wound formation in kidney."

**SM81****Retention of urine disorder (TM2)**

"Retention of urine, inability to urinate, abdominal pain

(AYU) retention of the urine due to vāta

(SID) It is explained by the combined vitiation of Vaḷi and Aḻal. vitiation of Vaḷi merged with excess heat, or caused due to the reduced function of Vayu for downward biological movements.

(UNA) It is caused by either coldness or hotness of bladder, flaccidity of bladder muscles."

**SM82**

**Insufficiency of the urinary bladder disorder (TM2)**

"obstruction/retention in passage of urine, dribbling of urine. May be associated with pain, burning sensation in bladder, abdominal region

(AYU) aggravation of vata affecting bladder leading to laxity and retention of urine.

(SID) It is explained by increased Vaḷi influences Aḷal affects Vayu for downward biological movements, Vayu for circulation. Among the seven physical constituents, Cāram to Koḷuppu is affected.

(UNA) predominance of coldness in urinary bladder, weakness of retentive power."

**SM83**

**Renal colic disorder (TM2)**

"spasmodic pain in loin radiating to pubic region and thigh. May be associated with hematuria, chills and fever.

(AYU) obstruction of urinary passage (due to renal calculi) aggravates vata leading to spasmodic pain.

(SID) It is explained by increased Aḷal influences Vaḷi affects Vayu for downward biological movements. Among the seven physical constituents, Cāram to Ūṇ is affected.

(UNA) stone in kidney or ureter formed due to impaired temperament of the related organs."

**SM84**

**Nephritis disorder (TM2)**

diminution/cessation of urine quantity, fever, heaviness the site of the kidney; may be associated with voiding of reddish discoloured urine, syncope, emesis

(SID) It is explained by the combined vitiation of Vaḷi and Aḷal vitiation of Vaḷi merged with heat, or caused due to the decreased Vayu for downward biological movements .

(UNA) derangement of Dam, Balgham, Ṣafrā, 'Sawdā'.

**SM85**

**Cystitis disorder (TM2)**

"pain in groin region, fever, difficulty in micturition with burning sensation or retention of urine, nausea and vomiting.

(SID) It is explained by increased aiyaṃ affects Vayu for downward biological movements. Among the the seven physical constituents, Cāram to Koḷuppu is affected.

(UNA) derangement of hot and cold humours."

**SM86**

**Wound of the urinary bladder disorder (TM2)**

"pain in the perineal region, dysuria and foul smelling urine with pus and casts.

(SID) This may be explained by increased Aḷal. Among seven physical constituents, Cāram, Cennīr , Ūṇ, and Koḷuppu are affected.

(UNA) presence of irritant Ṣafrā', injury by vesicular calculus or rupture of pustules of bladder. "

**SM87**

**Dysuria disorder (TM2)**

"painful micturition

(AYU) vitiated pitta vata causing erosion in urethral

(SID) It is explained by the vitiation of Vaḷi merged with excess heat .

(UNA) viscous Riyāḥ in the bladder"

**SM88**

**Dribbling of urine disorder (TM2)**

"dribbling of urine

(AYU) vitiated vata affecting the urinary bladder

(SID) it may be explained by increased Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ gets affected.

(UNA) insufficiency of repulsive faculty of bladder, insufficiency of bladder, predominance of Coldness in the body, acidity of urine"

**SM89**

**Thick urine disorder (TM2)**

"passing of thick urine.

(AYU) vitiation of kapha, vata

(UNA) defective maturation and sometimes elimination of thick mature humours"

**SM8A**

**Haematuria disorder (TM2)**

"Passing of blood in the urine.

(AYU) vitiation of pitta and blood affecting urinary tract.

(SID) It is explained by decreased Aḷal affects Vayu for downward biological movements. Among the the seven physical constituents, Cāram to Ūṇ is affected

(UNA) congestion of humours in kidneys, injuries in urinary organs."

**SM8B**

**Urinary incontinence disorder (TM2)**

"Involuntary flow of urine.

(AYU) vitiation of vata, excess pitta affecting urinary bladder.

(SID) It is explained by increased Aḷal. Among physical constituents Cāram, Cennīr , Ūṇ, and Kozuppu are affected

(UNA) Predominance of coldness on bladder, flaccidity of the muscles of bladder"

**SM8C****Urinary stone disorder (TM2)**

"Pain in loins & groin, difficulty in micturition, burning micturition

(AYU) It is caused by the vata drying up the kapha in the urinary tract.

(SID) It is explained by the combined vitiation of Vali and Azal either vitiation of Vali with excess heat or decreased Vayu for downward biological movements .

(UNA) It is caused due to retention of viscous humour inside the kidneys and hence their transformation into calculus due to the innate heat of body of kidneys. Inflammation and obstruction of kidneys due to their impaired temperament weakens the expulsive faculty of kidneys. As a result there is retention of viscous humours in the kidneys which essentially transforms into calculus"

**SM8D****Polyuria disorder (TM2)**

"Frequent and excessive urination.

(AYU) Vitiation of kapha along with watery part of the primary structural components of the body.

(SID) It is explained by increased Aiyam and decreased Azal

(UNA) Predominance of coldness on the bladder, weakness of retentive faculty of kidney."

**SM8E****Oliguria disorder (TM2)**

The disorder is characterized by passage of urine in less quantity. (AYU) It is caused by increase of vata. (UNA) It is caused by weakness of kidneys and liver and few external factors.

**SM8Y****Other specified urinary system disorders (TM2)****SM8Z****Urinary system disorders (TM2), unspecified****Female Reproductive System disorders (TM2) (SM90-SM9Z)****SM90****Amenorrhoea disorder (TM2)**

"absence of menstruation may be primary or secondary

(AYU) caused due to pitta situated in the uterine region vitiating the blood

(SID) physical constituents, Cāram and Cennīr gets affected.

(UNA) increased viscosity of Dam due to predominance of coldness or mixing of Balgham with it."

**SM91****Endocervicitis disorder (TM2)**

"Nodular swelling in genital organs, abnormal menstrual flow, vaginal discharge

(AYU) It is caused due to vitiated kapha affecting the cervix

(SID) It is explained by increased Azal and Vali. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA)"

**SM92**

**Bartholin's cyst disorder (TM2)**

"a tuberous pear like swelling in vaginal region. may be associated with pus discharge, fistual formation.

(AYU) vitiated pitta affecting skin, muscle and fat tissue.

(SID) It is explained by increased Aṣal and Vali. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected."

**SM93**

**Leucorrhoea disorder (TM2)**

"excessive whitish vaginal discharge which may be associated with foul smell, lower abdominal pain, weakness.

(AYU) It is caused by vitiated kapha affecting the vaginal region.

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused due to weakness of nutritive faculty of uterus or accumulation of waste products of Balgham, Ṣafrā', Sawdā' or Dam in the uterus. "

**SM94**

**Female infertility disorder (TM2)**

"inability to conceive may be due to primary or secondary amenorrhoea or other ovulation defects

(AYU) decrease or defects in primary product of digested food, vitated pitta, vitiated kapha causing obstruction and vitated vata casing irregular menstrual cycles.

(SID) It is explained by decreased Aṣal . Among seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu, Mūlai and Cukkilam are affected.

(UNA) caused by predominance of coldness and moistness on the uterus. It may also be caused by predominance of hotness, dryness and thick Rṭh on it"

**SM95**

**Vaginitis disorder (TM2)**

"pain, swelling, intense itching in the vaginal region

(AYU) vitiated kapha, pitta affecting vaginal region.

(SID) It is explained by of increased aiyam influences Aṣal . Among the seven physical constituents, Cāram and Cennīr gets affected. "

**SM96**

**Dysmenorrhoea disorder (TM2)**

"painful menstruation, pain in groin region, backache nausea and vomiting; relief of pain after menstruation; May be associated with discharge frothy menstrual fluid with clots.

(AYU) vitiation of kapha, vata affecting nutritional fluid, blood.

(SID) It is explained by deranged Vayu for circulation and Vayu for downward biological movementsn. Among the seven physical constituents, Cāram to Cukkilam is affected.

(UNA) increased viscosity of Dam."

**SM97**

**Hypomenorrhoea disorder (TM2)**

"Decreased blood flow during menstrual period

(AYU) vitiated vata affecting the nutritional fluid, blood in uterus region.

(UNA) increased viscosity of Dam."

**SM98**

**Dysfunctional uterine bleeding disorder (TM2)**

" increase in the duration of menstrual period and the quantity of blood loss

(AYU) vitiation of pitta and blood

(SID) It is explained by Vali. Among seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused by impaired temperament of uterus and predominance of Dam in the body."

**SM99**

**Uterine polyps disorder (TM2)**

"Muscular growth in uterus/vagina, foul smelling discharge,

(AYU) it is caused due to morbid dosha vitiating the skin, muscle and adipose tissue causing muscular growths in the uterus/vagina.

(SID) It may be explained by derangement of Vali , Azal & Aiyam . Among the seven physical constituents, Cāram, Cennīr, Ūṇ, are affected.

(UNA) It is caused due to accumulation of Sawdā' in the inner lining of uterus"

**SM9A**

**Uterine prolapse disorder (TM2)**

"Descending of uterus, laxity of muscles around uterus, back pain, discharge from uterus

(AYU) It is caused all the three dosha affecting the uterine region

(SID) It is caused by increased Vali

(UNA) It is due to pouring of secretions related to Balgham on uterine ligament leading to atony, external factors like trauma, lifting of heavy objects."

**SM9B**

**Vaginismus disorder (TM2)**

"constant vaginal pain, inability allow intercourse.

(AYU) vitiation of pitta, vata affecting vagina.

(SID) It is explained by increased Vali. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected. "

**SM9C****Metritis disorder (TM2)**

"Pain in the lower abdomen, back pain, retention of urine, fever and may be associated with vaginal discharge

(AYU) It is caused due to vitiated blood affecting the uterus

(SID) It is explained by of increased Aiyam influences Aṣal. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) This condition is caused by pouring of matter related to Dam or Ṣafrā' on uterus, predominance of coldness resulting in retention of matter within the uterus and predominance of Sawdā"

**SM9Y****Other specified female Reproductive System disorders (TM2)****SM9Z****Female Reproductive System disorders (TM2), unspecified****Male Reproductive System disorders (TM2) (SN00-SN0Z)****SN00****Balanitis disorder (TM2)**

"painful swelling and redness of the penis. May be associated with radiating pain to loin thigh region.

(AYU) aggravation of pitta affecting skin, muscle resulting in inflammation.

(SID) It is explained by increased aiyam influences Vaḷi affects Vayu for circulation, Vayu for downward biological movements. Among the the seven physical constituents, Cāram to Ūṇ is affect

(UNA) predominance of morbid humours, trauma"

**SN01****Hydrocele disorder (TM2)**

"Accumulation of fluid in the scrotum, scrotal tissues. May be associated with pain.

(AYU) increase of pitta, vata, kapha leading to laxity of muscles and accumulation of fluids.

(SID) It is explained by increased Vaḷi with aiyam. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) infiltration of moistness at the site making the structure moist and relaxed."

**SN02****Erectile dysfunction disorder (TM2)**

"inability to indulge in sexual act inspite of having desire due to erectile dysfunction

(AYU) vitiated vata affecting male genitalia

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram, Cennīr, Cukkīlam are affected.

(UNA) It is caused by lack of moistness in body and predominance of coldness in nerves of penis"

**SN03**

**Oligospermia disorder (TM2)**

"Decreased quantity and quality of semen, decreased sexual power, spermatorrhoea

(AYU) It is due to vitiation of all three dosha

(SID) It is explained by decreased *Vali* . Among seven physical constituents, *Cāram*, *Cennīr*, *Ūṇ*, *Kozuppu*, *Eṇpu*, *Mūlai* and *Cukkilaṁ* are affected

(UNA) predominance of dryness and impaired cold temperament."

**SN04**

**Mustard- size boils on penis disorder (TM2)**

"Mustard seed like boils in the penis

(AYU) It is caused by vitiated kapha and blood localising over the penis.

(SID) It is explained by increased *Aṣal* . Among the seven physical constituents, *Cāram*, *Cennīr* get affected. "

**SN05**

**Orchitis disorder (TM2)**

"severe radiating pain, swelling, redness and heat in the affected testes.

(SID) It is explained by increased *Vali*. Among the seven physical constituents *Cāram*, *Cennīr*, *Ūṇ* and *Kozuppu* gets affected.

(UNA) caused by matter of *Balgham* and *Sawdā'* origin"

**SN06**

**Penile growth disorder (TM2)**

"Small linear growth over the penis

(AYU) it is caused due to morbid dosha vitiating the skin, muscle and adipose tissue causing muscular growths in the penile region

(SID) It is explained by derangement of *Vali* and *iyam* . Among the seven physical constituents, *Cāram*, *Cennīr*, *Ūṇ* get affected

(UNA) It is caused by predominance of coldness in the penile region"

**SN07**

**Priapism disorder (TM2)**

Painful Penile erection

(AYU) It is caused due to vitiated vata affecting the penis.

(SID) It is explained by increased *Vali*. Among the seven physical constituents *Cāram*, *Cennīr*, *Ūṇ*, *Kozuppu*, are affected.

(UNA) This condition is caused by excessive accumulation of thick *Rṭh* in organs responsible for sexual activity.

**SN08**

**Prostatic enlargement disorder (TM2)**

Increased frequency of urination, obstruction in passing urine, hesitancy, weak urinary stream

(AYU) It is caused by vitiated vata.

(SID) It is explained by increased *Aiyam* and decreased *Vali*. Among the seven physical constituents *Cāram*, *Cennīr*, *Ūṇ* are affected.

(UNA) It is caused by the abnormal accumulation of thick *Balgham*.

**SN09****Spermatorrhoea disorder (TM2)**

"Abnormal uncontrolled emission of semen with erotic thoughts or during passing of urine

(AYU) It is caused by vitiated vata pushing semen along with urine

(SID) it is explained by increased Aṣal, and decreased Aiyam. Among the seven physical constituents Cāram Ūṇ, Cukkilaṃ gets affected.

(UNA) It is caused by acuteness of semen forcing the body for its excretion, flaccidity of organ responsible for storage of semen due to predominance of coldness and moistness leading to deficient retentive power required, renal debility, etc."

**SN0A****Phimosis disorder (TM2)**

"Obstruction of urethral meatus with the non retractable foreskin. Associated with local pain, dysuria, dribbling of urine.

(AYU)

(SID) It is explained by increased Aṣal . Among the seven physical constituents, Cāram, Cennīr get affected. "

**SN0Y****Other specified male Reproductive System disorders (TM2)****SN0Z****Male Reproductive System disorders (TM2), unspecified****Pregnancy and childbirth related disorders (TM2) (SN10-SN1Z)****SN10****Decreased breastmilk disorder (TM2)**

"decreased or cessation of secretion of breast milk may be associated with decreased size of the breast

(AYU)aggravation of vata and decreased primary product of digested food resulting in reduced breast milk production.

(UNA) impaired temperament and weak absorptive faculty of breasts."

**SN11****Vitiated breast milk disorder (TM2)**

"Regurgitation of milk, indigestion in the child.

(AYU) weak digestive and metabolic factors, vitated kapha, pitta , vata in the mother; and child after consuming the milk from her.

(SID) It may be explained by increased Aiyam. Among physical constituents Cāram affected."

**SN12**

**Recurrent pregnancy loss disorder (TM2)**

"Three or more consecutive spontaneous abortions.

(AYU) Vitiated Vata affecting the uterus.

(SID) It is explained by increased Vali. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) predominance of moistness and Rīḥ on uterus and other external and internal factors."

**SN1Y**

**Other specified pregnancy and childbirth related disorders (TM2)**

**SN1Z**

**Pregnancy and childbirth related disorders (TM2), unspecified**

**SN30**

**Gonorrhoea disorder (TM2)**

"A disorder characterized by painful or burning micturition, discharge of pus in urine, also associated with urethral swelling.

(AYU) It may be explained by physical injury, unhygienic sexual practices affecting three dosha, blood separately or in combination all of them, leading to development of lesions on the genitals.

(SID) It can be transmitted during intercourse from the affected person and to the child from the infected mother during child birth. It may be explained by increase in Azal and Vali . Among the seven physical constituents Cāram, Cennīr, Ūṇ, Eṇṇpu, Koḻuppu, Mūlai and Curōṇitam gets affected.

(UNA) It may be explained by acute and saline humours specially Ṣafrā' that causes irritation and abrasion on the passage from which they pass through. Apart from these, it is also caused by intercourse with an affected person. sometimes it is caused by excessive intake of sweet, spicy foods, excessive use of diuretics, sleeplessness , etc."

**SN31**

**Syphillis disorder (TM2)**

"painless, hard ulcers on the genitalia may be associated with discharge

(AYU) It is explained by involvement of the three dosha and tissues such as blood, muscle and bone, which causes ulcer.

(SID) It is explained by variations in Mukkuram which causes ulcer.

(UNA) It is caused by burnt Sawdā' or putrefied Sawdā'."

**SN3Y**

**Other specified urinary and reproductive system disorders (TM2)**

**SN3Z**

**Urinary and reproductive system disorders (TM2), unspecified**

## Skin, nail and hair disorders (TM2) (SN40-SN9Z)

### Skin disorders (TM2) (SN40-SN5Z)

**SN40**

#### **Dermatitis disorder (TM2)**

"reddish discoloration, burning sensation

(AYU) It is caused by vitiated three dosha affecting the skin, blood, muscle tissues.

(SID) It is explained by increased Azal and Vaḷi . Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected."

**SN41**

#### **Discoloration of body disorder (TM2)**

"Discolouration/ pigmentation of skin

(AYU) It is caused due to increased vata

(SID) It is caused due to increased Vaḷi

(UNA) It is caused due to predominance of waste humours in the body and their deviation towards skin"

**SN42**

#### **Dryness of skin disorder (TM2)**

"Dryness, scaliness and cracking of extremities and face

(AYU) It is caused by increased vata affecting skin

(SID) It is explained by increased Vaḷi and decreased aiyam. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused by the predominance of dryness in the body."

**SN43**

#### **Eczema disorder (TM2)**

"Crusted eruptions, intense burning resembling flame of fire, itching, dryness of the skin, blackish discoloration may be associated with discharge.

(AYU)

(SID) It is explained by derangement of Vayu for circulation. Among the seven physical constituents Cāram, senner, Eṇpu affected.

(UNA) It is caused by Ṣafrā' mixed with small quantity of Sawdā' or Acrid Ṣafrā' mixed with Dam "

**SN44**

#### **Foul body smelling disorder (TM2)**

"Foul smelling sweat from palm, sole, axilla and groin region

(AYU) predominance of vitiated pitta affecting the skin

(UNA) Accumulation of putrified matter in the body and impaired function of sweat glands."

**SN45**

**Excess of sweat disorder (TM2)**

"Excessive sweating.

(AYU) It is caused by increased pitta.

(SID) It is explained by increased Aṣal.

(UNA) It is caused by weakness of the retentive faculty and laxity of the skin pores."

**SN46**

**Scabies disorder (TM2)**

"Red papular eruptions over the skin with severe itching and burning and involve mostly hands between fingers, legs, groin and, sometimes, whole body.

(AYU) indigestion, weak digestive and metabolic factors, vitiation of kapha, pitta affecting the skin, integuments

(SID) It is explained by increase of Vāṇi. Among the seven physical constituents, Cāram, Cennīr, are get affected.

(UNA) It is caused by derangement of Dam, mixing of Sawdā' produced as result of burning of Ṣafrā' and salty Balgham with Dam, itch mite affliction"

**SN47**

**Dracunculosis disorder (TM2)**

ulceration of eruptions, a red thread like worm comes out from it which is quite long and its length gradually increases.

(AYU) unhygienic conditions leading to vitiation of kapha, blood, skin making susceptible for worm infestation.

(SID) It is explained by increased Vāṇi and Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) thread like worm infestation.

**SN48**

**Intertrigo disorder (TM2)**

sticky moistness, itching, burning sensation of interdigital areas of feet

(AYU) vitiation of kapha, pitta affecting skin, blood, muscle.

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr are affected.

(UNA) accumulation of putrified matter at the site.

**SN49**

**Integumentary disorder (TM2)**

"Hypopigmented patches of the skin, loss of sensation, deformity and derangement of shape of the organs and with or without purulent discharge.

(AYU) skin disorder due to vitiation of all the three dosha and seven tissues.

(SID) It is explained by increased Vāṇi and Aṣal. Among seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu are affected.

(UNA) It is caused by the spread of abnormal burnt Sawdā' in the body resulting in the morbid temperament of organs."

**SN4A****Psoriasis disorder (TM2)**

"Roughening and hardening of part of skin, whitish scaling, less itching, dryness of skin.

(AYU) It is caused by vitiated vata and kapa dosha affecting the skin

(SID) It is explained by increased Vali and Azal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu are get affected.

(UNA) It is caused by acute and irritant burnt Sawdā' and dry saline matter."

**SN4B****Ichthyosis disorder (TM2)**

Appearance of skin similar to scales of fish, roughness of skin, sloughing of skin, absence of sweating

(AYU) It is caused by vitiated vata and kapa dosha affecting the skin.

(SID) It is explained by increased Vali. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu are affected.

(UNA) It is caused sticking of acrid and noxious matter related to any of the four humours to the skin.

**SN4C****Scaling of scalp and forehead skin disorder (TM2)**

Scaling of scalp / forehead skin

(AYU) It is caused due to increased vata.

(SID) It is explained by increased Vali and Azal. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) It is caused by the predominance of dryness in the forehead.

**SN4D****Vitiligo disorder (TM2)**

"Whitish depigmentation of parts of the skin or whole of it may be associated with whiteness of hair of the affected part.

(AYU) It is caused by all the three dosha and affecting the skin

(SID) It is explained by increased Vali affecting Azal. Among the seven physical constituents, Cāram, Cennīr are affected.

(UNA) It is caused by the cold morbid temperament of the affected part of the skin and predominance of Balgham. "

**SN4E****Lentigo disorder (TM2)**

Appearance of black spots on the body, painless

(AYU) It is caused due to all the three dosha.

(SID) It is explained by increased Vali and Azal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu are affected.

(UNA) It is caused due to the collection of Sawdā' under the skin.

**SN4F**

**Birth mark - blackish red disorder (TM2)**

"congenital blackish / reddish painless circular lesion

(AYU) It is caused due to vitiated kapha and blood

(UNA) It is caused due to the predominance of Sawdā' under the skin"

**SN4G**

**Melasma disorder (TM2)**

Appearance of bluish, black or red spots united to form a patch on the face

(AYU) it is due to vitiated vata and pitta affecting the skin of the face.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents, Cāram, Cennīr are affected.

(UNA) It is caused by burnt Dam mixed with Sawdā', Bukhārāt arising from Sawdā', excessive intake of Sawdā' producing diets, weakness of spleen and amenorrhea, etc.

**SN4H**

**Mole disorder (TM2)**

"Appearance of black coloured circular spots slightly raised from the surface of the skin

(AYU) It is caused by vitiated vata affecting the skin

(SID) It is explained by increased Vaḷi. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused due to the predominance of burnt Sawdā' under the skin"

**SN4J**

**Black red skin lesion disorder (TM2)**

"Apperance of blackish and reddish colouration of skin, severe pain, burning sensation and foul odour

(AYU) It is caused by all the three dosha affecting the skin, blood, muscle and adipose tissue

(SID) It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr and Ūn are affected. "

**SN4K**

**Urticaria disorder (TM2)**

"Appearance of abrupt elevated lesion on the skin, itching, pain

(AYU) It is caused due to vata and kapha in association with pitta

(SID) It may be explained by the increased Vaḷi and Aḷal. Among the physical constituents Increased Cāram, Cennīr obeserved due to changes in the blood.

(UNA) It is caused by the predominance of Bukhārāt of strong nature produced by Dam, Balgham, Sawdā' "

**SN4L**

**Wheal disorder (TM2)**

"Reddish raised circular rashes with itching.

(AYU) It is caused due pitta and kapha

(SID) It is explained by the aggravation of Aṣal with Aiyam. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused due to the predominance of Dam"

**SN4M**

**Boil disorder (TM2)**

"Small boils with redness, pain and associated with suppuration

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ are get affected.

(UNA) It is caused by acute Dam in which thick morbid fluid is mixed."

**SN4N**

**Prickly heat disorder (TM2)**

"Appearance of multiple small prickly eruptions all over the skin

(AYU) It is caused due to increased pitta

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by accumulation of acute Ṣafrā' related secretions of thin consistency or thick Bukhārāt of hot nature under the skin."

**SN4P**

**Pemphigus vulgaris disorder (TM2)**

"Appearance of eruption of skin with collection of fluid may be associated with fever

(AYU) It is caused by pitta localising in the skin

(SID) It is explained by increased Vaḷi with Aiyam Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu gets affected.

(UNA) It is caused by the predominance of Ṣafrā'"

**SN4Q**

**Scar marks disorder (TM2)**

"Marks left after the healing of a wound or other morbid process

(SID) It is explained by increased Aiyam. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by the decreased transformative power at the affected site."

**SN4R**

**Roughness of skin disorder (TM2)**

"Roughness and thickness of skin may be associated with itching

(AYU) It is caused due to vitiated vata

(SID) It is explained by increased Vaḷi , Aṣal and Aiyam. Among the Seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, gets affected

(UNA) It is caused by predominance of Sawdā and its infiltration towards the skin."

**SN4S****Verruca disorder (TM2)**

"Hard nail like eruptions of variable shapes and sizes appearing on the surface of skin

(AYU) weak digestive and metabolic factors, vitiation of primary product of digested food leading to vitiation of vata affecting the blood, muscle, fat and skin.

(SID) It is explained by the imbalance of Vali and Aṣal humour affecting the Aṣal for nourishment of blood and Aṣal for complexion. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) caused by extremely thick and dry matter related to Balgham or Sawdā in nature or may be mixture of both."

**SN4T****Herpes disorder (TM2)**

"spreading, superficial clusters of small vesicular eruptions on the skin, sensation of ant-bite, itching, burning.

(AYU) Vitiation of pitta, vata

(SID) It may be explained by increased Vali and Kīṣṇōkku kāl affected especially . Among the seven Uṭṭātūkkal Cāram, Cennīr, Ūṇ, gets affected.

(UNA) It is caused by predominance of Ṣafrā' mixed with Dam."

**SN4U****Ring worm infection disorder (TM2)**

"itching, roughness of skin, elevated ring shaped lesion with or without scaling, and blackish or redish discoloration.

(AYU) Vitiation of kapha.

(SID) it is caused by heat, high humidity, lack of personal hygiene, contact with contaminated things and person. It is explained by increased Vali affecting Aiyam. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) It is caused by acrid Dam of thin consistency mixed with Sawdā', and the scaling occurs when saline Balgham is mixed with Sawdā'."

**SN4V****Acne disorder (TM2)**

"small, milky white eruptions appear on face, especially on cheeks and nose during adolescence.

(AYU) aggravation of pitta, kapha affecting fatty tissue.

(SID) It is explained by aggravation of Aṣal associated with Aiyam. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) predominance of Dam in the body, stuck unresolved thick ichorous matter in skin pores."

**SN4W**

**Ulcer disorder (TM2)**

"discountinuity of structure (ulceration) due to injury or internal causes.

(AYU) vitiation of vata, pitta, skin, muscle

(SID) It is explained by increased Azal. Among the seven physical constituents, Cāram, Cennīr and Ūṇ gets affected.

(UNA) loss of continuity, as a result of infiltration of acrid humours and external causes."

**SN5Y**

**Other specified skin disorders (TM2)**

**SN5Z**

**Skin disorders (TM2), unspecified**

**Nail disorders (TM2) (SN60-SN6Z)**

**SN60**

**Brittle nails disorder (TM2)**

"whitish, mica coloured discoloration, brittleness of nails

(AYU) vitiated digestive and metabolic factors resulting in non absorption of nutrients leading to vitiation of vata.

(UNA) excessive dryness in the body and nails"

**SN6Y**

**Other specified nail disorders (TM2)**

**SN6Z**

**Nail disorders (TM2), unspecified**

**Hair disorders (TM2) (SN70-SN7Z)**

**SN70**

**Furunculosis of scalp disorder (TM2)**

"Mutiple opening lesion and excessive soddening in the scalp

(AYU) It is caused by vitiated kapha and blood localising over the scalp

(SID) It is explained by increased Azal. Among the seven physical constituents Cāram and Cennīr, gets affected. "

**SN71**

**Baldness disorder (TM2)**

"falling of scalp hair

(AYU) aggravated vata and pitta affecting the hair roots followed by closure of hair root.

(SID) It is explained by aggravation of Azal. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koḻuppu, Eṇṇu, Mūḷai and Cukkilaṁ gets affected.

(UNA)predominance of coldness and dryness, lack of nutrition to the scalp, widening or narrowing of the skin pores, "

**SN72**

**Folliculitis disorder (TM2)**

"wet papules, ulceration involving hair follicles on head, face and other body parts.

(AYU) deranged digestive and metabolic factors leading to vitiation of pitta, kapha, skin, blood, muscle, fat tissue

(UNA) It is caused by corrosive & morbid fluids mixed with Dam."

**SN73**

**Premature greying of hair disorder (TM2)**

"untimely greying of the hair.

(AYU) increased pitta, vata cause premature greying of the hair.

(SID) It is explained by the decreased Aṣal for nourishment of blood and Vaḷi subsequently increases Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Koṣuppu, Eṇpu and Mūlai gets affected.

(UNA) It is caused by impaired function of digestive power, excess of Balgham associated with weakened innate heat of body and excess of dryness in the body."

**SN7Y**

**Other specified hair disorders (TM2)**

**SN7Z**

**Hair disorders (TM2), unspecified**

**SN90**

**Patchy alopecia disorder (TM2)**

"falling of hair in the form of patches from scalp, beard and eyebrows leaving shiny patches.

(AYU) aggravated vata and pitta affecting the hair roots

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA) it is caused by sticking of acrid & noxious matter related to any of the four humors to the hair roots "

**SN91**

**Dandruff disorder (TM2)**

"Dryness of the scalp, appearance of husk like flakes on the scalp, itching, ulceration

(AYU) It is caused by increased dryness due to vata and kapha affecting the scalp.

(SID) It is explained by increased Aṣal . Among the seven physical constituents, Cāram and Cennīr gets affected.

(UNA)It is caused by morbid temperament of the skin of scalp, strong alkaline matter and predominance of salty humors of Balgham origin and Dam mixed with Sawdā"

**SN92**

**Carbuncle disorder (TM2)**

"Red eruptions with suppuration and multiple openings, severe burning sensation.

(AYU) vitiation of blood, flesh and fat.

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) It is caused by thick acrid Ṣafrā' and acrid Dam."

**SN9Y Other specified skin, nail and hair disorders (TM2)**

**SN9Z Skin, nail and hair disorders (TM2), unspecified**

## Bone, joint and muscle disorders (TM2) (SP00-SP4Z)

### Bone disorders (TM2) (SP00-SP0Z)

**SP00 Osteoporosis disorder (TM2)**

atrophy, weakness of bones; may lead to fractures.

(AYU) weak digestive and metabolic factors, bone metabolism, malnutrition leading to severe aggravation of vata and decrease of kapha.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu are affected.

(UNA) Predominance of coldness and dryness.

**SP0Y Other specified bone disorders (TM2)**

**SP0Z Bone disorders (TM2), unspecified**

### Joint disorders (TM2) (SP10-SP1Z)

**SP10 Polyarthrititis disorder (TM2)**

"Multiple joint pain, restricted movement, swelling and stiffness

(AYU) It is caused due to the involvement of vata and blood

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Eṇpu gets affected.

(UNA) it is caused by the predominance of any one of the four humors i.e Dam, Balgham, Safrā and Sawdā."

**SP11 Rheumatism disorder (TM2)**

"Inflammation and pain of joints, fever with chills and rigors, involvement of other organs such as heart

(AYU) It is caused due to the increased vata associated with ama

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, gets affected.

(UNA) It is commonly caused by matter of whitish colour and thick consistency."

**SP12****Osteoarthritis disorder (TM2)**

"Pain, swelling, stiffness, hardening and restricted movements of the joint

(AYU) It is caused by increased vata affecting the joint leading to degenerative changes

(SID) It is explained by increased Vaḷi and Aḻal . Among the seven physical constituents, Cāram and Cennīr, Ūṇ, Kozuppu, Eṇpu gets affected.

(UNA) It is caused by hardening of humors within the joint. "

**SP13****Hip joint pain disorder (TM2)**

"Non radiating pain of hip joint, altered gait, weakness of lowerlimbs, difficulty in moving hip joints.

(AYU) vitiation of vata.

(SID) It is caused due to the injury to Toṭai maiya varmam

(UNA) It is caused by any of the four humours or more than one humour as in case of polyarthritis but commonly occurs due to immature Balgham."

**SP14****Gout disorder (TM2)**

"Pain, swelling and tenderness of the foot especially great toe.

(AYU) It is caused due to the derangement of vata and blood associated with pitta

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram and Cennīr gets affected.

(UNA) It is caused by morbid temperament of joints and the collection of morbid matter therein; their weakness (Joints and their body)."

**SP15****Frozen shoulder disorder (TM2)**

"Pain, stiffness and restricted movements of the shoulder joint

(AYU) It is caused due to increased vata affecting the nerves and vessels of shoulder region

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Eṇpu gets affected.

"

**SP1Y****Other specified joint disorders (TM2)****SP1Z****Joint disorders (TM2), unspecified**

## Muscle disorders (TM2) (SP20-SP2Z)

### SP20

#### **Muscle pain, twisting disorder (TM2)**

"Severe spasmodic/cramp like pain in upper or lower limb muscles. May be shifting in nature

(AYU) severe vitiation of vata.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr and Ūṇ gets affected.

(UNA) infiltration of irritant humour or predominance of coldness."

### SP21

#### **Atony disorder (TM2)**

Atony or flaccidity of the joints, muscles and body parts.

(AYU) obstructed or aggravated vata causes loss of functions, flaccidity.

(SID) It is explained by increased Vaḷi and Aḷal. Among the seven physical constituents Cāram, Cennīr are affected.

(UNA) simple cold and wet morbid temperament, cold inflammation of spinal cord, trauma as cirsis of certain diseases.

### SP2Y

#### **Other specified muscle disorders (TM2)**

### SP2Z

#### **Muscle disorders (TM2), unspecified**

### SP40

#### **Achillodynia disorder (TM2)**

Pain in heel especially during walking.

(AYU) It is caused due to increased vata affecting the heel.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) It is caused by trauma or infiltration of matter of Dam or Balgham origin coming from parts of the body lying above the heels.

### SP41

#### **Sciatica disorder (TM2)**

moderate to severe pain, starting from acetabulum of hip bone, mainly travelling laterally to ankle joint and rarely radiating from the medial side of thigh.

(AYU) vitiation of vata affecting nerves, tendons, muscles of leg; may be associated with vitated kapha (resulting in mild pain).

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, Eṇṇu are affected.

(UNA) It is caused mostly by pouring of thick Dam and thick Balgham, occasionally Safrā and rarely by Sawdā, on sciatic nerve.

**SP42**

**Lumbar spondylosis disorder (TM2)**

"backache of various degree. May be associated with stiffness, immobility.

(AYU) vitiation of vata, kapha affecting the local muscle tissue.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu gets affected.

(UNA) It can be due to cold impaired temperament, predominance of Balgham"

**SP43**

**Lumbo-sacroiliac disorder (TM2)**

"lowbackache usually of chronic nature with gradual increase in intensity.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozhuppu gets affected.

(UNA) simple cold morbid temperament or accumulation of Balgham at the site. "

**SP44**

**Torticollis disorder (TM2)**

"stiffness and bending of the neck to one side.

(AYU) Vata vitiation affecting neck muscles, tendons.

(SID) It is explained by increased Aiyam. In this type of among the seven physical constituents Cāram, Cennīr, and Ūṇ, gets affected. "

**SP45**

**Cervical spondylosis disorder (TM2)**

"pain, stiffness of the neck.

(AYU) vitiation of vata causing stiffness of neck muscles.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu and Eṇpu gets affected."

**SP4Y**

**Other specified bone, joint and muscle disorders (TM2)**

**SP4Z**

**Bone, joint and muscle disorders (TM2), unspecified**

Disorders affecting the whole body (TM2) (SP50-SP9Z)

Febricity disorders (TM2) (SP50-SP5Z)

**SP50**

**Enteric fever disorder (TM2)**

"Continous fever, eruptions of the skin, vomiting, abdominal distension

(SID) It is explained by increased Vaḷi followed by Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu, Mūlai get affected.

(UNA) it is caused by the putrefaction of waste products accumulated in the body"

**SP51**

**Fever disorder (TM2)**

"Increased body temperature and absence of sweating

(AYU) It is caused by any of the three dosha affecting the primary product of digested food

(SID) It may be explained by derangement of Vali, Azal & Aiyam

(UNA) it is caused by the putrefaction of waste products accumulated in the body"

**SP52**

**Fever disorder with excessive salivation (TM2)**

"Fever associated with indigestion, heaviness, decreased thirst, excessive salivation, weakness, expectoration

(AYU) It is caused due to increased kapa dosha affecting the primary product of digested food and leading to weakness of digestive and metabolic factors

(SID) It is explained by increased Aiyam. Among the physical constituents Cāram gets affected.

(UNA) It is caused by putrefaction of Balgham inside the vessels"

**SP53**

**High fever disorder with yellow discoloration (TM2)**

"High fever, dizziness, yellowish/reddish discoloration of various body parts, excessive thirst, bitter taste in mouth

(AYU) It is caused due to increased pitta affecting the primary product of digested food and leading to weakness of digestive and metabolic factors

(SID) It is explained by increased Azal. Among physical constituents Cāram, Cennīr gets affected which in turn affects the sleep, nutrition and excretion.

(UNA) It is caused due to putrefaction of Şafrā"

**SP54**

**Fever with body pain disorder (TM2)**

"Body pain, blackish discoloration of body, irregular fever, constipation

(AYU) It is caused due to increased vata affecting the primary product of digested food and leading to weakness of digestive and metabolic factors

(SID) It is explained by increased Vali. Among physical constituents Cāram, Cennīr gets affected."

**SP55**

**Fever with chills disorder (TM2)**

"Fever with rigor, headache, excessive thirst, restlessness, vomiting

(SID) It is explained by increased Vali. Among physical constituents Cāram, Cennīr gets affected.

(UNA) It is caused as result of putrefaction of Şafrā' outside the vessels"

**SP56**

**High grade fever disorder (TM2)**

"High grade fever

(SID) It is caused by increased Vali and Aiyam.

(UNA) It is caused by putrefaction of any of the four humors i.e Dam, Balgham, Şafrā', Sawdā' "

**SP57**

**Intermittent fever disorder (TM2)**

"Irregular onset, remission and episodes of fever

(AYU) It is caused by any of the three dosha affecting the dhathu

(SID) It is explained by aggravated Azal. Among the seven physical constituents, Cāram get affected.

(UNA) It is caused by the putrefaction of the humours outside the vessels"

**SP58**

**Continuous fever disorder (TM2)**

Continuous fever

(AYU) It is caused by all the three dosha affecting primarily primary product of digested food.

(SID) It is explained by increased Vali and Azal. Among the seven physical constituents, Cāram, Cennīr are affected.

(UNA) It is caused due to putrefaction of humours inside the vessels.

**SP59**

**Fever disorder due to external factor (TM2)**

This disorder is characterised by increased body temperature and caused by external factors like poison, sorrow, grief, excessive anger.

(AYU) It is caused by vitiation of dosha due to external causes.

(SID) It is explained by the derangement of Vali, Azal and Aiyam due to external factors and are categorised into 12 types.

(UNA) It is caused by adverse effect of external factors on Rūh; physical, vital or psychic.

**SP5A**

**Inflammation with morbid matter disorder (TM2)**

"swelling with yellowish discolouration, softness with pain and burning sensation

(AYU) It is caused by vitiation of vata, pitta, kapha, blood or all the three dosha together.

(SID) It is explained by increased Azal. Among the seven physical constituents, Cāram, Cennīr and Ūṇ get affected.

(UNA) derangement of Dam, Balgham, Şafrā, 'Sawdā'"

**SP5B**

**Consumptive disorder (TM2)**

"continuous low grade fever for a prolonged period of time along with dry skin, sunken cheeks and eyes, anorexia, gradual loss of strength

[AYU] it involves all three dosha (predominantly kapha) leading to obstruction of channels gradually depleting all the seven tissues.

[SID] It is explained by increased Aiyam associated with Vali and Azal. Among the physical constituents initially Cāram get affected which involves another physical constituents one by one.

[UNA] extreme hotness within the body and gradual consumption of the essential moistness of the organs."

**SP5Y**

**Other specified febricity disorders (TM2)**

**SP5Z****Febricity disorders (TM2), unspecified****Metabolic disorders (TM2) (SP60-SP6Z)****SP60****Diabetes mellitus disorder (TM2)**

"increased thirst, increased urination, sweet urine, debility.

(AYU) increased quantity of urine is due to the association of corrupted element with the watery element of the body, while the turbidity of urine is due to the specific conjunction of dosha and primary structural components of the body.

(SID) It is explained by increased Azal humour. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu, Mūlai, Cukkilaṃ gets affected.

(UNA) Increase of innate heat of kidneys."

**SP61****Emaciation disorder (TM2)**

"Sudden or gradual loss of body weight, loss of muscle.

(AYU) It is explained as emaciation in the body due to vitiation of vāta.

(SID) It is explained by increased Vaḷi along with Aiyam. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Kozuppu gets affected.

(UNA) It is caused by weakness of the faculties of stomach due to its cold temperament, derangement of temperament due to Ṣafrā', or dysfunction of liver."

**SP62****High fat disorder (TM2)**

"generalized increase of fatty tissue in the body. May be associated with hyperlipidemia.

(AYU) impaired digestive and metabolic factors related to fat tissue, deranged vata, kapha

(SID) It is explained by increased Aiyam. Among udalthadhukkal Cāram, Cennīr, Ūṇ and Kozuppu are affected"

**SP63****Polydipsia disorder (TM2)**

"The feeling of extreme thirstiness and difficulty in quenching the thirst.

(AYU) pitta and vāta increases which desiccates the bodily placid and balghamatic elements.

(SID) It is explained by the increased Azal humour and then by the vitiated Vaḷi humour.

(UNA) It is caused by the accumulation of thick salty humours in the stomach."

**SP64**

**Obesity disorder (TM2)**

"Excessive generalized accumulation of fat.

(AYU) It is caused by increased kapha and fat tissue.

(SID) It is explained by increased Aiyam which influences Vali (Vayu for circulation and Vayu for homeostasis) / Aṣal (Aṣal for digestion, Aṣal for performing desired acts). In seven physical constituents Cāram and Koṣuppu get affected.

(UNA) It is caused by deranged temperament, excessive and abnormal accumulation of humours."

**SP6Y**

**Other specified metabolic disorders (TM2)**

**SP6Z**

**Metabolic disorders (TM2), unspecified**

**Tumours disorders (TM2) (SP70-SP7Z)**

**SP70**

**Lipoma disorder (TM2)**

"Solitary or multiple soft lipid lump like swellings under the skin.

(AYU) deranged digestive and metabolic factors, vitiation of kapha and fatty tissue.

(SID) It is explained by the increased Aiyam and Among the seven physical constituents Cāram, Cennīr, Ūṇ and Koṣuppu are gets affected.

(UNA) predominance of Balgham."

**SP71**

**Benign tumour disorder (TM2)**

" movable swelling with varying size from gram seed to watermelon. May be of different characters and constitutional symptoms.

(AYU) involvement of all the three vitiated humours, seven elementary tissues

(SID) It is initially caused due to excessive growth activated by Aiyam and later factors of Mukkuram and seven physical constituents slowly get deranged.

(UNA) impairment of temperament, accumulation of humours."

**SP72**

**Deep rooted spreading tumour disorder (TM2)**

"uncontrolled spreading of swellings associated with multiple constitutional symptoms like weight loss, severe exhaustion.

(AYU) involvement of all the three vitiated humours, seven elementary tissues

(SID) It is explained by increase of all three humours. All the seven physical constituents are affected

(UNA) humours related to Sawdā'."

**SP7Y**

**Other specified tumours disorders (TM2)**

**SP7Z**

**Tumours disorders (TM2), unspecified**

**SP90**

**Abscess disorder (TM2)**

"Pain, swelling, redness of the affected part, discharge of the pus

(AYU)aggravation of pitta affecting skin, fat, muscle tissue resulting in swelling and suppuration.

(SID) It is explained by increased Azal. Among the seven physical constituents, Cāram and Cennīr gets affected initially and then Ūṇ, Koṣuppu and sometimes Eṇpu gets affected.

(UNA) it is due to decreased vital Rūḥ of the affected part as a result of predominance of hotness. "

**SP91**

**Generalised oedema disorder (TM2)**

"generalized oedema of the body

(AYU) vitiated blood, pitta and kapha obstruct the movement of vata leading to the generalized swelling

(SID) It is explained by alteration in the potency of blood and increased Aiyam which alters the Vayu for downward biological movements . Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu, gets affected.

(UNA) This condition is caused by weakness of digestive power and cold deranged temperament of liver."

**SP92**

**Oedema disorder (TM2)**

Painless soft swelling with pitting on the site of swelling and heaviness.

(AYU) vitiation digestive and metabolic factors, all the three humours and water carrying channels.

(SID) It is explained by increased Aiyam and Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ, Koṣuppu, Eṇpu, Mūḷai are affected.

(UNA) infiltration of Dam, Balgham, Ṣafrā', Sawdā', Rīḥ and Bukhārāt at the site.

**SP93**

**Impaired immunity disorder (TM2)**

"Overall decrease of health leading to impaired immunity resulting in susceptibility to disease.

(AYU) ojas gets vitiated by dosha and affecting the whole body.

(SID) It is explained by derangement of all three humours. All the seven physical constituents are affected.

(UNA) Insufficiency of innate heat."

**SP94**

**Inflammation disorder (TM2)**

"Redness, swelling, warmth of affected part,

(AYU) It is caused due to vitiated dosha especially pitta

(SID) It is explained by increased Azal. Among the seven Uṭṭātukkaḷ, Cāram, Cennīr and Ūṇ get affected.

(UNA)It is caused by accumulation of waste products resulting in harmful effects. It is produced by each of the four body humours, watery matter or Rīḥ.."

**SP95**

**Excessive yawning disorder (TM2)**

"Morbid excessive yawning

(AYU) It is caused by increased vata

(SID) It may be explained by increased Vali

(UNA) It is caused by accumulation of Bukhārāt in the muscles of jaws and lips"

**SP96**

**Laziness disorder (TM2)**

"unwillingness to take be physically active and avoiding engaging in mentally active activities.

(AYU) excess kapha obstructing the mental faculties and pitta for intellect.

(UNA) excessive accumulation of Bukhārāt in the body which in turn leads to heaviness of heart, increased fatigue and lethargy"

**SP97**

**Severe fatigue disorder (TM2)**

"feeling extreme exhaustion even without any physical effort/work.

(AYU) vitiation of all the three dosha, seven elementary tissues and ojas.

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr, Ūṇ and Kozuppu gets affected. "

**SP98**

**Syncope disorder (TM2)**

"temporary loss of consciousness, pale face, cold extremities, nausea

(AYU) It is caused due to vitiated pitta and involving of rajas and tamas

(SID) It is explained by increased Aṣal and Vali. Among the seven physical constituents, Cāram, Cennīr get affected.

(UNA) It is caused by deranged temperament of body, excessive evacuation, congestion, obstruction in the vessels"

**SP99**

**Pruritus disorder (TM2)**

"itching of the body without the appearance of eruptions or rashes

(AYU) Excess of vitiated kapha, pitta affecting the skin

(SID) It is explained by increased Aṣal affecting Vali. Among seven physical constituents, Cāram and Cennīr gets affected.

(UNA) It is caused due to retention of acrid and irritant Bukhārāt and a small quantity of irritant humours beneath the skin"

**SP9A**

**General debility disorder (TM2)**

"exhaustion, loss of complexion.

(AYU) Caused due to weakness of primary structural components of the body.

(SID) It is explained by the increased Vali and Aiyam. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu, Mūlai, Curōṇitam are affected.

(UNA) It is caused by insufficient or suboptimal functions of the body powers."

**SP9Y**

**Other specified disorders affecting the whole body (TM2)**

## Mental, emotional and behavioural disorders (TM2) (SQ00-SQ4Z)

## Mental disorders (TM2) (SQ00-SQ0Z)

## SQ00

**Delirium disorder (TM2)**

"irrelevant and irrational talk, mental confusion.

(AYU) Vitiation of Vata affecting motor and intellectual faculties.

(SID) It can be explained by derangement of Mukkurram. Among the seven physical constituents Cāram to Cukkīlam is affected.

(UNA) Accumulation of burnt Sawdā', Sawdā' produced as a result of burning of Ṣafrā', Sawdā' produced as a result of burning of Dam and putrefied Balgham in the brain."

## SQ01

**Hallucination disorder (TM2)**

"mental confusion and hallucinations

(AYU) It is caused by vitiation of blood

(SID) It is explained by increased Aḡal. Among the seven physical constituents Cāram, Cennīr and Ūṇ get affected. "

## SQ02

**Hysteria disorder (TM2)**

"Apparent unconsciousness, inability to speak, feeling of a gas ball rolling from abdomen upto throat, behavioural changes.

(SID) It is explained by increased Aḡal and Valī. among the seven physical constituents Cāram to Cukkīlam, Curōṇitam gets affected.

(UNA) Accumulation of morbid matter in the uterus and the surrounding organs."

## SQ03

**Insanity disorder (TM2)**

"Confused state of mind, change in behaviour, irritability, loss of intelligence,.

(AYU) caused by the aggravated dosha vitiating the sense organs, mind and intellect.

(SID) It is explained by derangement of Valī, Aḡal and Aiyam. Among the seven physical constituents, Cāram and Cennīr are affected.

(UNA) Impairment in medicatrix naturae, excessive mental fatigue."

**SQ04**

**Depressive disorder (TM2)**

"Mental confusion, fear, sadness, depression, may be associated with altered sleep patterns.

(AYU) grief causing vitiation of the vata,kapha leading to the depression of mental faculty.

(SID) It is explained by increased Aṣal. Among the seven physical constituents Cāram, Cennīr and Ūṇ, gets affected.

(UNA) caused by the accumulation of burnt Sawdā' or burnt Ṣafrā' in the brain."

**SQ05**

**Lack of concentration, confusion disorder (TM2)**

"difficulty to concentrate, fickleness, confusion

(AYU) vitiation of vata affecting the mind.

(UNA) caused by predominance of hot putrified Balgham, burnt Sawdā'and burnt Ṣafrā', "

**SQ0Y**

**Other specified mental disorders (TM2)**

**SQ0Z**

**Mental disorders (TM2), unspecified**

**Emotional disorders (TM2) (SQ10-SQ1Z)**

**SQ10**

**Anxiety ephemeral fever disorder (TM2)**

"mild fever, confusion, restlessness, anxiety, mind and body fatigue

(AYU) agitated rajoguna, tamoguna leading to

(SID) It may be explained by increased Vaḷi, decreased Aiyam. Among the the seven physical constituents Cāram is affected.

(UNA) abnormal heating of Rūḥ."

**SQ1Y**

**Other specified emotional disorders (TM2)**

**SQ1Z**

**Emotional disorders (TM2), unspecified**

**Behavioural disorders (TM2) (SQ20-SQ2Z)**

**SQ20**

**Alcoholism disorder (TM2)**

"Confusion, tremors, headache, altered cognitive, intellectual functions, may be associated with fever.

(AYU) Vitiating pitta further affecting Vata.

(SID) There is an increase in Aṣal. Among the seven physical constituents, Cāram, Cennīr, Ūṇ, Kozuppu, Eṇpu, Mūḷai Cukkilaṁ, Curōṇitaṁ gets affected.

(UNA) It is caused by excessive intake of alcohol leading to impairment of temperament and Rūḥ."

**SQ21**

**Egomania disorder (TM2)**

"Feeling onself as superior to others, arrogance, forceful expression

(SID) It is explained by increased Aṣal. and Vali. Among the seven physical constituents, Cāram, Cennīr get affected

(UNA) predominance of coldness or coldness and dryness in the mid brain, weakness of thinking faculty."

**SQ22**

**Non alcoholic intoxication disorder (TM2)**

"incoherent speech, unstable movements, elation, ecstasy

(AYU) increase of tamoguna affecting intellect.

(SID) It is explained by increased Aṣal and Vali. Among the seven physical constituents, Cāram, Cennīr get affected. "

**SQ23**

**Panic attack disorder (TM2)**

"panic attacks, fainting due to excessive emotions

(SID) It is explained by increased Vali. Among the seven physical constituents, Cāram, Cennīr gets affected.

(UNA) sudden inward movement of Rūḥ"

**SQ24**

**Insomnia disorder (TM2)**

"loss of sleep, heaviness of head, body pain

(AYU) It is caused due to increased vata

(SID) It is explained by increased Aṣal. Among the seven physical constituents, Cāram to Cukkilaṃ get affected

(UNA) It is caused by predominance of dryness in the body."

**SQ2Y**

**Other specified behavioural disorders (TM2)**

**SQ2Z**

**Behavioural disorders (TM2), unspecified**

**SQ40**

**Hypersomnia disorder (TM2)**

excess, prolonged deep sleep

(AYU) deranged digestive and metabolic factors, increased kapha and decreased vata.

(SID) It is explained by increased Vali. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) predominance of coldness, excess of Balgham, accumulation of Dam in brain.

**SQ41**

**Lycanthropy disorder (TM2)**

"violent behaviour, pacing, intentional loneliness, unwarranted suspicion dryness of tongue along with emaciation and non-healing ulcers of calf muscles.

(AYU) vitiation of pitta, rajoguna

(SID) It is explained by increased Azal. Among the seven physical constituents Cāram, Cennīr gets affected.

(UNA) caused by burnt Śafrā"

**SQ4Y**

**Other specified mental, emotional and behavioural disorders (TM2)**

**SQ4Z**

**Mental, emotional and behavioural disorders (TM2), unspecified**

External factors disorders (TM2) (SQ50-SQ8Z)

Infestation disorders (TM2) (SQ50-SQ5Z)

**SQ50**

**Worm infestation disorder (TM2)**

"pain in the abdomen, excessive salivation, grinding of teeth during sleep, decreased or increased appetite, nausea after meals.

(AYU) excessively consumed substances such as blackgram, jaggery, meat, milk etc., it causes vitiated kapha which makes the situation conducive for infestation and growth of infestation.

(SID) It is explained by increased Azal. Vali which is followed by Among the seven physical constituents Cāram, Cennīr get affected.

(UNA) It is caused by the putrefaction of fluids related to Balgham in the intestines."

**SQ5Y**

**Other specified infestation disorders (TM2)**

**SQ5Z**

**Infestation disorders (TM2), unspecified**

Poisoning disorders (TM2) (SQ60-SQ6Z)

**SQ60**

**Pseudo poisoning disorder (TM2)**

"Sweating, tremor, dryness of mouth, vomiting, fever,

(AYU) It is caused by rajas and tamas affecting the mind

(SID) It is explained by decreased Azal which increases the Vali. All the Seven physical constituents gets affected."

**SQ61**

**Artificial poison disorder (TM2)**

"Pallor, emaciation, swelling of body parts.

(AYU) It is caused by impairment of functioning of ojas due to poison

(SID) It is explained by increased Azal which affects Aiyam. Among the seven physical constituents Cāram and Cennīr are affected. "

**SQ6Y**

**Other specified poisoning disorders (TM2)**

**SQ6Z**

**Poisoning disorders (TM2), unspecified**

**SQ80**

**Inadequate diet disorders (TM2)**

"Altered appetite, weakness, emaciation, lack of concentration.

(AYU) It is caused by vitiation of Vata, leading to decreased body strength.

(SID) It is explained by increase of Mukkuram. All the seven physical constituents are affected."

**SQ8Y**

**Other specified external factors disorders (TM2)**

**SQ8Z**

**External factors disorders (TM2), unspecified**

**Childhood disorders (TM2) (SR00-SR0Z)**

**SR00**

**Marasmus disorder (TM2)**

"Emaciation, lack of appetite, unctuous, pale face, eyes; may be associated with fever, dry cough, cyanosis of tongue.

(AYU) It is caused due to obstruction of channels due to breast milk vitiated by kapha

(SID) It may be explained by increased Aiyam followed by Vaḷi. Among physical constituents Cāram and Cennīr are affected."

**SR01**

**Bed wetting disorder (TM2)**

involuntary passing of urine during sleep.

(AYU) defective functioning of apaanavaayu and disturbances in general Vata functioning which controls the mind.

(SID) It is explained by increased Vaḷi. Among the seven physical constituents Cāram, Cennīr, Ūṇ are affected.

(UNA) Predominance of coldness on the bladder, flaccidity of the muscles of the bladder.

**SR02**

**Infantile dysentery disorder (TM2)**

"Diarrhoea may be associated with fever, vomiting.

(SID) It may be explained by increased Vaḷi and increased Aḷal. Among physical constituents Cāram, Cennīr and Ūṇ are affected.

(UNA) It is caused by predominance of coldness and Ṣafrā'. "

**SR03**

**Infantile epilepsy disorder (TM2)**

"Episodes of convulsions with frothing from mouth, stiffness of the extremities in infants.

(AYU) It is caused due to possessive state

(SID) It may be explained by increased aiyam. In seven udal thathukal the Caram, Cennīr, Un gets affected.

(UNA) It is caused by thick viscous humour producing obstruction in the nerves originating from brain or by thick Rīḥ producing obstruction in the openings of brain ventricles."

**SR04**

**Ophthalmia neonatarum disorder (TM2)**

"Redness, swelling and discharge from the eyes

(AYU) It is caused by vitiated dosha due to vitiated breast milk

(SID) It is explained by increased Vaḷi and Aḷal. "

**SR05**

**Childhood malnutrition disorder (TM2)**

"diminution of digestive power, tastelessness, emaciation, abdominal enlargement; may be associated with cough, drowsiness/lassitude, giddiness or dizziness, vomiting and diarrhoea

(AYU) derangement of digestive and metabolic factors, lack of nutrition increasing vata

(SID) It may be explained by increased Aḷal "

**SR06**

**Oral thrush in babies disorder (TM2)**

"Appearance of ulcers on the external surface of mouth and tongue

(SID) It may be explained increased Aḷal . Among physical constituents Cāram, Cennīr and Ūṇ are affected.

(UNA) It is caused by accumulation of morbid humours due to indigestion resulting from poor quality of milk"

**SR0Y**

**Other specified childhood disorders (TM2)**

**SR0Z**

**Childhood disorders (TM2), unspecified**

## Traditional medicine patterns (TM2) (SR10-ST2Z)

A pattern in traditional medicine (TM2) refers to the manifestation of the patient's health condition at a given moment in time or constitution, temperament. It delivers information reflecting the overall manifestation or response of the person. It encompasses both specific symptoms/signs and non-specific findings.

## Functional elements and humoral derangement patterns (TM2) (SR10-SR2Z)

This group enlists patterns arising out of derangement of functional elements, humours. It occurs when there is abnormal change in quantity and/or quality of any humour either through increase or decrease in quantity, change of temperament such as getting hot or cold or due to admixture with another humour or through change produced within the humour itself. Such derangement is transient in nature and refer to pre or post disorder manifestation which is clinically relevant to either abort further progression to the morbidity or recovery in the convalescence phase.

**SR10**

### **Vitiation of vāta pattern (TM2)**

pattern characterized by abdominal pain and increased gaseous movements in abdomen

**SR11**

### **Accumulation of Vata pattern (TM2)**

pattern characterized by impaired movements of vāta, fullness of abdomen and aversion to factors causing of increase of vāta such as cold

**SR12**

### **Aggravation of vata pattern (TM2)**

pattern characterized by roughness or hoarseness of voice, emaciation, blackish discoloration of body, twitching in various parts of body, desire for warmth, insomnia, reduced physical strength, hard stools

**SR13**

### **Spreading of vata pattern (TM2)**

pattern characterized by abnormal movements of vāta, abdominal distension and gurgling sound in the abdomen

**SR14**

### **Depletion of vata pattern (TM2)**

pattern characterized by sluggishness in activities, reduced talking, lack of interest in activities, loss of consciousness

**SR15**

### **Vitiation of pitta pattern (TM2)**

pattern characterized by sour erucation, excessive thirst and burning sensation

**SR16**

### **Accumulation of pitta pattern (TM2)**

pattern characterized by yellowish discoloration of body and mild raised body temperature

**SR17**

### **Aggravation of pitta pattern (TM2)**

pattern characterized by yellowish discoloration of the body, increased body heat, desire for cold, reduced sleep, loss of consciousness, weakness of body and sense organs, yellowish discoloration of stool, urine and eyes

**SR18**

**Spreading of pitta pattern (TM2)**

pattern characterized by localised or whole body burning sensation, feeling of smoky eructation

**SR19**

**Depletion of pitta pattern (TM2)**

pattern characterized by reduced body temperature and reduced digestive power, reduced luste of the body

**SR1A**

**Vitiation of kapha pattern (TM2)**

pattern characterized by aversion to food and nausea

**SR1B**

**Accumulation of kapha pattern (TM2)**

pattern characterized by heaviness of the body and lethargy

**SR1C**

**Aggravation of kapha pattern (TM2)**

pattern characterized by whitish discoloration of body, feeling of cold, reduced mobility of the body, heaviness of the body, fatigue, feeling of drowsiness, excessive sleep, loosening of joints

**SR1D**

**Spreading of kapha pattern (TM2)**

pattern characterized by tastelessness, indigestion, feeling of tiredness, vomiting

**SR1E**

**Depletion of kapha pattern (TM2)**

pattern characterized by dryness of body, burning sensation inside the body, laxity of joints, thirst, weakness, reduced sleep

**SR1F**

**Increase of Vali (Vali humour) pattern (TM2)**

This pattern of disequilibrium or the morbid increase of Vali is characterized by emaciation with blackish discoloration of stools, conjunctiva and body, desire to eat warm foods, tremors, abdominal distension, reduced body strength, disturbance in sleep pattern, diminished activities of five sense organs, slurred speech, giddiness, and loss of perseverance, , numbness, urine and stool retention, stiffness of joints, astringent taste in the mouth

**SR1G**

**Increase of Azal pattern (TM2)**

This pattern of disequilibrium or the morbid increase of Azal is featured by hotness, moistness, sourness, anger, salivation, bitterness in tongue, hiccups, increased sweat, bad odour, itching, dryness of skin, and anuria, burning micturition, scanty micturition, etc. Yellowish discoloration of urine, feces, skin, and the conjunctiva is due to the hyperfunctioning of Azal for complexion. Increased appetite and polydipsia are due to the increased action of Azal for digestion in the stomach and intestines. Burning sensation all over the body and disturbed, insufficient sleep are caused due to increase of Azal for nourishment of blood.

**SR1H****Increase of Aiyam pattern (TM2)**

This pattern of disequilibrium or the morbid increase of Aiyam is characterized by decreased digestion power/fire, increased salivation, fatigue, heaviness of body with pallor and chillness, weakness of seven physical constituents, paleness of bodily fluids, stools, and conjunctiva, wheezing, flatulence, cough and increased sleep, sensation of sweet taste in tongue

**SR1J****Decrease of Vaḷi (Vaḷi humour) pattern (TM2)**

This pattern of disequilibrium or the morbid decrease of Vaḷi is characterized by body pain of stabbing, bursting nature, feeble voice, decreased activities, the diminished power of knowledge, syncope, and manifestations of increased Aiyam.

**SR1K****Decrease of Aḡal pattern (TM2)**

This pattern of disequilibrium or the morbid decrease of Aḡal is featured by poor digestion, coolness, and demulcent which are attributed to the diminished functioning of Aḡal for digestion and Aḡal for vision. Pallor is due to the diminished functioning of Aḡal for nourishment of blood and Aḡal for vision. The decrease of Aḡal hinders the natural growth of Aiyam.

**SR1L****Decrease of Aiyam pattern (TM2)**

This pattern of disequilibrium or the morbid decrease of Aiyam is characterized by giddiness, weakness of joints due to the loss of synovial fluid, and the apparent projection of the bones. Due to diminution of phlegm in the chest, there will be feeling of emptiness inside the lung field, sweating of hair follicles and palpitations.

**SR1M****Predominance of Dam pattern (TM2)**

Qualitative imperfection or quantitative excess of Dam in the body that may lead to heaviness in the body in general and eyes, head and temporal region in particular and may also lead to bleeding due to rupture of delicate vessels.

**SR1N****Predominance of Ṣafrā' pattern (TM2)**

Qualitative imperfection or quantitative excess of Ṣafrā' in the body characterized by rapid and swift pulse, urine that is flame yellow and of thin consistency, increased thirst, dryness and roughness of tongue and bitter taste, yellowish discolouration of skin and eyes, etc.

**SR1P****Predominance of Balgham pattern (TM2)**

Qualitative imperfection or quantitative excess of Balgham in the body characterized by sluggishness, soft skin, excessive secretion of sticky saliva, delayed digestion, increase in sleep, slow pulse, etc.

**SR1Q****Predominance of Sawdā' pattern (TM2)**

Qualitative imperfection or uantitative excess of Sawdā' characterized by rough, dry and dark skin, increased appetite, increased viscosity of blood, dark coloured/blackish urine, tendency to develop splenic diseases and psychiatric patterns

**SR1R**

**Blood thickening pattern (TM2)**

It is an alteration in the quality of the blood characterized by its increased viscosity often resulting from consuming diets that produce thick consistency blood or any other factor.

**SR1S**

**Blood thinning pattern (TM2)**

It is an alteration in the quality of the blood characterized by its decreased viscosity often resulting from consuming diets that produce thin consistency blood or any other factor.

**SR1T**

**Blood deficiency pattern (TM2)**

A blood pattern characterized by a decrease in the quantity of blood and anemia.

**SR1U**

**Blood hyperviscosity pattern (TM2)**

A moisture pattern characterized by an alteration in consistency of the blood as increased viscosity.

**SR1V**

**Spoilage of humors pattern (TM2)**

Alteration in the quality and temperament of humours to the point that is considered abnormal and brings about diseases associated with imbalance of that humour.

**SR1W**

**Burning of humors pattern (TM2)**

It is a condition in which a part of moisture of humour is burnt due to exposure to excess abnormal body heat and the remaining part becomes thicker.

**SR1X**

**Thickening of humors pattern (TM2)**

A condition characterized by thickening of the moist part of one or more of the four humours.

**SR20**

**Pattern of occlusion (TM2)**

Pattern characterised by the occlusion of the free flowing and all-pervading Vata dosha or subtype of it by one another or by Pitta, Kapha, tissues, food and excreta leading to hampering of the normal functioning of the dosha.

**SR2Y**

**Other specified functional elements and humoral derangement patterns (TM2)**

**SR2Z**

**Functional elements and humoral derangement patterns (TM2), unspecified**

**Physical constituent derangement patterns (TM2) (SR40-SR6Z)**

This group enlists patterns arising due to generic abnormality viz., increase, decrease, vitiation of structural elements, composition or breach in continuity.

**SR40**

**Vitiation of "primary structural components of the body" pattern (TM2)**

disturbance of homeostasis leading to an abnormal or pathological or diseased state

**SR41****Aggravation of primary circulating nutrient fluid pattern (TM2)**

The pattern is characterized by nausea, excessive salivation, tastelessness, distaste of mouth, nausea, obstruction in channels, aversion for eating sweet food, generalised body ache, diseases caused by kapha, white discolouration, coldness, obesity, lethargy, heaviness, exhaustion or tiredness to body /inability to perform physical activities, obstruction in channels/obstruction to flow of primary product of digested food, syncope/attacks of swooning, excessive sleep, drowsiness/lassitude, breathlessness/difficult breathing, cough, diminution of digestive power, loosening /dislocation of joints, flaccidity/laxity in body parts, loss of appetite, heaviness with cold and pallor in the body, weakness in body constitution and gasping and bloating

**SR42****Depletion of primary circulating nutrient fluid pattern (TM2)**

The pattern is characterized by shaking, Intolerance to hearing loud noises, palpitation of heart, palpitation on little exertion, body pain, precordial pain/cardiac pain, tremors, absence of mind/feeling of emptiness in body, thirst, dryness/wasting/emaciation, palpitation, tiredness on little exertion/dyspnoea on exertion, dryness, fatigue in mind and body.

**SR43****Morbid increase of blood pattern (TM2)**

The pattern is characterized by redness of skin/body parts, reddish coloured eyes, fullness of blood vessels, skin disease, spreading cellulitis/erysipelas, papules/eruptions, irregular or excessive menstruation, redness/inflammation of eyes- conjunctivitis, redness/inflammation of mouth- stomatitis, redness/inflammation of penis- balanitis, redness/inflammation of anus- proctitis, splenomegaly, palpable glandular enlargement in abdomen/abdominal lump, abscess, blackish patches on face, clinical features of jaundice, loss of digestive power, feels as entering into darkness, clinical features of polyarthritis, diseases caused by pitta, unconsciousness/confusion, urine with blood, clinical features of bleeding patterns, inflammation of gums/gingivitis, clinical features of jaundice, throbbing pain, anorexia and colic pain

**SR44****Depletion of blood pattern (TM2)**

The pattern is characterized by rough/dry skin, cracked skin, faded skin/lusterless skin, dryness of skin, pray for/desire for/liking of sour taste, pray for/desire for/liking for cold, laxity of vessels/tortuous vessels and dryness. pallor, tiredness, burning sensation over the feet and lassitude

**SR45****Excessive increase of muscular tissues pattern (TM2)**

A pattern characterized by enlargement of hips, cheeks, lips, temple; penis, thighs, calf muscles; heaviness of limbs, hips cheeks, abdomen, thighs, calf; diseases of the palate, tongue, throat; glandular swelling in jaw and throat region, chin, nodules in neck region and an increase in muscle mass in the neck

**SR46****Depletion of muscular tissues pattern (TM2)**

The pattern is characterized by wasting of hips, wasting of neck, wasting of abdomen, wasting of cheeks/whole side of the face including the temple, wasting/dryness of lips, wasting/ dryness of genitals/penis, wasting of thighs, wasting of chest, wasting of armpits/axilla, wasting of calf, dryness, pricking pain, exhaustion or tiredness of body, flabbiness of arteries, lazy eyes/eye fatigue, splitting type of pain in joints and weakness of five vital senses

**SR47**

**Increase of adipose tissues pattern (TM2)**

The pattern is characterized by unctuousness of body parts, pendulous fatty enlargement of abdomen, fatty deposition in flanks, cough, difficulty/hard breathing, dyspnoea on little exertion, bad odour, prodromal signs of prameha, complications of obesity, diseases of kapha & rakta, signs and symptoms of enlargement/hypertrophy of mamsa, exhaustion/fatigue, pendulous fatty enlargement of hips, pendulous fatty enlargement of breasts.

**SR48**

**Depletion of adipose tissues pattern (TM2)**

The pattern is characterized by breaking/splitting type of pain, fatigue in mind and body, eye stress, sunken abdomen, splenomegaly, hollowness felling in joints, dryness of body parts, desire for fatty meat, numbness in low back, emaciation, exhaustion/fatigue, dryness/wasting/emaciation, signs symptoms of depletion of māṃsa and weakness of muscles in the loin

**SR49**

**Increase of bone tissues pattern (TM2)**

The pattern is characterized by excessive growth of bones/bone growing over another and excessive growth of teeth/redundant tooth which grows over another

**SR4A**

**Depletion of bone tissues pattern (TM2)**

The pattern is characterized by scalp hair fall/thinning, body hair fall/thinning, nail fall/thinning, beard/moustache fall/thinning, teeth fall/decaying, exhaustion/fatigue, dislocation of joint/lax joints, pain in the bones, gums and tooth, cracked teeth, cracked nail, dryness, roughness/dryness, pricking type of pain in the bones, desire to eat bony-meat.

**SR4B**

**Increase of bone marrow pattern (TM2)**

The pattern is characterized by heaviness of the whole body, heaviness and swelling of the eyes, redness of eyes, redness of body, furuncles at the base of small joints, swollen phalanges, oliguria, and nonhealing ulcers

**SR4C**

**Depletion of bone marrow pattern (TM2)**

The pattern is characterized by decaying, weakness, lightness, repeatedly affliction with diseases due to vata, less quantity of semen /śukra, breaking type of pain in small joints, pricking/piercing type of pain of the bone, feeling of emptiness in bones, porousness of bones, giddiness or dizziness, black out.

**SR4D**

**Increase of reproductive tissues and semen pattern (TM2)**

The pattern is characterized by seminal calculi/precipitated semen as calculus, excessive ejaculation of semen, excessive desire of intercourse with women

**SR4E**

**Depletion of reproductive tissues and semen pattern (TM2)**

The pattern is characterized by weakness or loss of physical strength, dryness of mouth, pallor/pale colour of body parts, exhaustion or tiredness to body and mind, exhaustion/fatigue, inability to perform sexual act/impotence, not able to ejaculate semen/suppression of semen, penile pain, scrotal pain/severe pain in scrotum, inability to perform sexual act, delayed ejaculation, semen with little blood on ejaculation, blackout, pricking type of pain in scrotum, smoky sensation in penis.

**SR4F**

**Diminution of Ojas pattern (TM2)**

the pattern is characterized by fear, loss of physical strength or weakness, constantly thinking, distressed sense organs/sense organs not able to perform properly, diminished complexion, lack mental strength, dry, wasted/dried up/emaciated, syncope/attacks of swooning, extreme wasting of muscles/diminution of muscle mass, confusion/delirium, excess talking/irrelevant speech/incoherent speech, death.

**SR4G**

**Derangement of Ojas pattern (TM2)**

the pattern is characterized by stiffness of the body, heaviness of limbs, swelling caused by vāta, discoloration of the skin; fatigued mind and body, drowsiness/lassitude, sleep

**SR4H**

**Dislodgement of Ojas pattern (TM2)**

the pattern is characterized by loosening /dislocation of joints, exhaustion or tiredness of body, depletion of dosha, suppression of activities

**SR4J**

**Increased menstrual flow pattern (TM2)**

the pattern is characterized by generalised bodyache, excessive menstrual bleeding/menorrhagia, bad odour

**SR4K**

**Diminution of menstrual flow pattern (TM2)**

the pattern is characterized by menstruation not on proper time/metrorrhagia, scanty menstrual flow, pain in vagina.

**SR4L**

**Increased secretion of breast milk pattern (TM2)**

the pattern is characterized by fully extended/large breast, frequent lactation, pricking pain

**SR4M**

**Decreased secretion of breast milk pattern (TM2)**

the pattern is characterized by emaciated breast /absence of charm of breasts, suppression of lactation, reduced lactation

**Derangement of channels pattern (TM2) (SR50-SR5Z)**

derangement of srōtas is caused by the intake of incompatible food which leads to the origin of disease.

**SR50**

**Derangement of channels carrying essence of digested food pattern (TM2)**

the pattern is characterized by disinclination for food, tastelessness, distaste of mouth, ageusia, nausea, heaviness, drowsiness/lassitude, generalised body ache, fever, fainting, pallor, obstruction of the channels of circulation, inability to perform sexual act/impotence, exhaustion or tiredness of body, emaciated/thin /malnourished, loss of digestive power, premature appearance of wrinkles, premature appearance of grey hairs.

**SR51**

**Derangement of channels enriching blood pattern (TM2)**

pattern is characterized by cyanosis, fever, burning sensation, pallor, haemorrhage and blood-red eyes.

**SR52**

**Derangement of channels enriching muscle tissue pattern (TM2)**

the pattern is characterized by swelling, varicose veins, death, emaciation of muscles, excessive growth in muscle tissue, tumour, goite and cervical lymphadenitis.

**SR53**

**Derangement of channels carrying fat pattern (TM2)**

the pattern is characterized by perspiration, oiliness of the body, dryness of the palate, non-pitting oedema and thirst.

**SR54**

**Derangement of channels enriching bone pattern (TM2)**

the pattern characterized by excess aggravation of vata, severe localized and/or generalised body pains, weightloss, extra growth of bone and teeth, deformities in nail and nail bed, deformities in hairs and moustache, splitting pain in bone and toothache.

**SR55**

**Derangement of channels enriching bone marrow pattern (TM2)**

the pattern is characterized by interphalangeal joint pain, interphalangeal joints enlargement, giddiness, unconsciousness and feeling of darkness in front of eyes.

**SR56**

**Derangement of channels enriching seminal fluid pattern (TM2)**

the pattern is characterized by inability to perform sexual act/impotence, lack of sexual arousal, birth of diseased offspring/progeny, birth of impotent offspring, birth of offspring with reduced lifespan, birth of offspring with deformities, infertility, abortion, miscarriage, delayed ejaculation, blood tinged semen, no semen on ejaculation.

**SR57**

**Derangement of channels enriching vital life force pattern (TM2)**

the pattern is characterized by severe restricted expiration, agitated expiration, slow expiration, frequent expiration, expiration with loud sound, expiration with pain.

**SR58**

**Derangement of channels for fluid circulation pattern (TM2)**

the pattern is characterized by dryness in tongue, palate, lips and root organ of water-carrying conduits along with excessive severe thirst.

**SR59**

**Derangement of digestive tract pattern (TM2)**

the pattern is characterized by disinclination for food, tastelessness, indigestion, vomiting

**SR5A**

**Derangement of channels of faeces pattern (TM2)**

the pattern is characterized by difficulty in defecation, scanty defecation, defecation with sound, painful defecation, defecating watery stools, defecating scybalous/hard stools, defecating large volume stools.

**SR5B**

**Derangement of urinary tract pattern (TM2)**

the pattern is characterized by burning sensation in penis.

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SR5C</b> | <b>Derangement of channels producing sweat pattern (TM2)</b><br>the pattern is characterized by absence of perspiration, excess perspiration, excessive roughness, excessive smoothness, burning sensation all over the body and horripilation.                                                                                                                                                                                                                                                                                |
| <b>SR5D</b> | <b>Derangement of channels enriching breast milk pattern (TM2)</b><br>It is characterized by eight types of vitiations of breast milk, they are distasteful, frothy, ununctuous due to vitiation of vata, discoloration, foul smelling due to vitiation of pitta, unctuous, slimy and heaviness due to vitiation of kapha.                                                                                                                                                                                                     |
| <b>SR5E</b> | <b>Derangement of mind related channels pattern (TM2)</b><br>the pattern is characterized by perversion of mind, intellect, consciousness, knowledge, memory, desire, manners, behaviour and conduct.                                                                                                                                                                                                                                                                                                                          |
| <b>SR5Y</b> | <b>Other specified derangement of channels pattern (TM2)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>SR5Z</b> | <b>Derangement of channels pattern (TM2), unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>SR60</b> | <b>Increase of female reproductive tissue pattern (TM2)</b><br>This is characterized by excessive desire or hypersexuality towards the opposite sex due to increased sexual drive (libido) and arousability. It is also characterized by vaginal calculi due to stasis and contagion in the lower genital tract.                                                                                                                                                                                                               |
| <b>SR61</b> | <b>Decrease of female reproductive tissue pattern (TM2)</b><br>This is characterized by dryness of the vagina resulting in failure to reproduce along with bloody vaginal discharge, hematuria, dyspareunia, aching pain, and hyperpigmentation of the vagina. It affects normal vaginal lubrication, acidic vaginal pH, and normal physiologic condition leading to inflammation of the lower genital tract.                                                                                                                  |
| <b>SR62</b> | <b>Pattern resulting in abnormal number of organs and appendages (TM2)</b><br>a general term for patterns that cover those structural diseases in which number of body organs is abnormally increased or decreased                                                                                                                                                                                                                                                                                                             |
| <b>SR63</b> | <b>Pattern of abnormal positioning of organs and appendages (TM2)</b><br>a general term for patterns that cover those structural diseases in which defects in position and proximity of body organs occur. The defects in position include total or partial shifting of any organ. It also includes the defects in voluntary and involuntary movements of body organs. The movement may decrease or increase. The defects in proximity include, loss of gap between two adjacent organs leading to cessation of their movement |
| <b>SR64</b> | <b>Pattern of abnormal relative position of organs (TM2)</b><br>a general term for patterns that cover those structural diseases in which the position of an organ in relation to neighbouring structures is abnormally changed                                                                                                                                                                                                                                                                                                |
| <b>SR65</b> | <b>Loss of continuity pattern (TM2)</b><br>a general term for patterns that cover the diseases which are caused by loss of continuity in simple organ                                                                                                                                                                                                                                                                                                                                                                          |

**SR66**

**Rīḥ pattern (TM2)**

A body constituents pattern characterized by any pathological alteration in the quality or quantity of Rīḥ in the body.

**SR67**

**Bukhārāt pattern (TM2)**

A body constituents pattern characterized by any pathological alteration in the quality or quantity of Bukhārāt in the body.

**SR68**

**Compound pattern (TM2)**

A disorder that primarily affects compound organs but may subsequently spread to compound organs.

**SR69**

**Pattern of quantity (TM2)**

A disorder of composition characterized by a pathological change in the quantity of any body constituent or organ.

**SR6Y**

**Other specified physical constituent derangement patterns (TM2)**

**SR6Z**

**Physical constituent derangement patterns (TM2), unspecified**

**Excretory products derangement patterns (TM2) (SR80-SR8Z)**

This group enlists patterns due to abnormal change either in nature of excretory products i.e. Urine, stool, sputum, sweat or in their manner of excretion indicate the nature of pathology developing in the body and help the physician in determining the nature and stage of disease.

**SR80**

**Morbid increase of feces pattern (TM2)**

the pattern is characterized by gurgling sound in flanks, heaviness and enlargement of abdomen. Gurgling sound in flanks to be changed to gurgling sounds in abdomen.

**SR81**

**Depletion of faeces pattern (TM2)**

the pattern is characterized by gripping type of pain (colic), pain in the pericardial region/angina pectoris, pain in flanks, reverse intestinal movement of vāyu associated with sound, oblique movement of vāyu with sound in abdomen, increased bowel movements in flanks, less quantity of faeces.

**SR82**

**Excessive urine pattern (TM2)**

the pattern is characterized by frequent micturition, pricking pain in urinary bladder, abdominal distension, feeling of urge even after micturition.

**SR83**

**Reduced urine pattern (TM2)**

the pattern is characterized by dysuria, pricking pain in urinary bladder, oliguria, discolouration of urine, hematuria, thirst and dryness of mouth.

**SR84**

**Hyperhidrosis pattern (TM2)**

the pattern is characterized by bad odour of skin, itching, increased perspiration

**SR85**

**Anhidrosis pattern (TM2)**

the pattern is characterized by stiff/rigid body hairs, wasting/contracture of skin, impaired touch perception, loss of perspiration, hair fall, tearing/cracking of skin, numbness of skin, hardness/roughness of skin.

**SR86**

**Faeces with undigested food residues pattern (TM2)**

the pattern is characterized by obstruction in channels, diminution of physical strength, heaviness, lethargy, indigestion, spitting out, obstruction to passage of faeces, tastelessness and exhaustion without exertion.

**SR87**

**Urine of over heat pattern (TM2)**

This disequilibrium is characterized by colour of the fire with flames, due to excessive heat. It is due to increased Azal, which affects Vayu for downward biological movements, and cukkilam is affected.

**SR88**

**Urine colour of excessive cold pattern (TM2)**

This disequilibrium is characterized by a type of blue colour urine that represents excessive cold. This results in Vali diseases in children and old age people.

**SR89**

**Urine colour of excessive depravement of Vali, Azal and Aiyam pattern (TM2)**

This disequilibrium is characterized by pure leafy green colour urine indicates excessive depravement of Vali, Azal and Aiyam. This is a severe condition.

**SR8A**

**Urine like colour of raw-meat washings pattern (TM2)**

Abnormal change of colour and consistency of urine caused by weakness of liver or excess of blood and abnormal temperament of liver. It is characterized by like colour of raw-meat washings urine

**SR8B**

**Delayed passing of stool pattern (TM2)**

Abnormal change in the time for passing out of stool caused by weakness of digestion, coldness of intestines and excess of moisture . It is characterized by delayed passing of stool

**SR8C**

**Dry stool pattern (TM2)**

Abnormal change in consistency of stool caused by fatigue, excessive urination, presence of excessive hotness in the body, use of dry foods and constipation. It is characterized by dry stool

**SR8D**

**Larger quantity of stool pattern (TM2)**

Abnormal change in the quantity of stool, when it is larger than food intake caused by presence of excessive quantity of humours in the body. It is characterized by large quantity of stool

**SR8E**

**Sharp smelling sweat pattern (TM2)**

a pattern marked by sharp smelling sweat due to presence of matter related to Şafrā', pungent and sharp matter within the body

**SR8F**

**Sour smelling sweat pattern (TM2)**

a pattern marked by sour smelling sweat due to presence of sour Balgham within the body

**SR8G**

**Sweat of thick consistency pattern (TM2)**

a pattern caused by thickness of disease causing matter, marked by sweat of thick consistency

**SR8H**

**Sweat of thin consistency pattern (TM2)**

a pattern caused by thinness of disease causing matter, marked by sweat of thin consistency,

**SR8J**

**Lack of sweat pattern (TM2)**

a pattern marked by lack of sweat as a result of weakness of repulsive faculty

**SR8K**

**Excess of sputum pattern (TM2)**

Abnormal change in quantity of sputum caused by maturation of disease causing matter and stationary phase of disease. It is characterized by excessive quantity of sputum

**SR8L**

**Lack of sputum pattern (TM2)**

Abnormal change in quantity of sputum caused by progressive phase of disease. It is characterized by scantiness of sputum

**SR8M**

**Moderate quantity of sputum during convalescence pattern (TM2)**

Abnormal change in quantity of sputum caused by convalescence. It is characterized by moderate quantity of sputum

**SR8N**

**Excess of sweat pattern due to decreased vitality (TM2)**

A pattern marked by excessive sweating and denotes weakness and decreased vitality.

**SR8Y**

**Other specified excretory products derangement patterns (TM2)**

**SR8Z**

**Excretory products derangement patterns (TM2), unspecified**

**Power derangement and chronic accumulation patterns (TM2) (SS10-SS4Z)**

This group of patterns enlists conditions arising due to deranged power viz. digestion, metabolism, innate transformative strength of tissues, which provides the basis for different bodily functions. It can manifest as the weakness, strength and loss of power that leads to many morbid conditions.

**Digestive fire based patterns (TM2) (SS10-SS1Z)**

**SS10**

**Derangement of digestive power pattern (TM2)**

the pattern is characterized by derangement of digestive power

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SS11</b> | <b>Irregular digestive power pattern (TM2)</b><br>pattern characterized by irregular digestion irrespective of quantity and quality of food.                                                                                                                                                                                                                                                                                                                                  |
| <b>SS12</b> | <b>Elevated digestive power pattern (TM2)</b><br>Pattern characterized by quick digestion of varied quantity and quality of food.                                                                                                                                                                                                                                                                                                                                             |
| <b>SS13</b> | <b>Subdued digestive power pattern (TM2)</b><br>Pattern characterized by delayed digestion of food.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>SS14</b> | <b>Highly elevated digestive power pattern (TM2)</b><br>The pattern is characterized by severely increased state of digestive power leading to quick digestion of food despite of frequent and extra quantity intake. If food is not taken, leads to digestion of body tissues leading to weakness, succumbs to death, may be associated with thirst, difficulty in breathing, burning sensation, syncope, burning sensation in throat, palate, lips at the end of digestion. |
| <b>SS15</b> | <b>State of incomplete digestion, transformation or metabolism pattern (TM2)</b><br>Pattern characterized by reduced body strength, heaviness of the body, reduced digestive power, lethargy, indigestion, expectoration, tastelessness, feeling of weakness even without exertion.                                                                                                                                                                                           |
| <b>SS16</b> | <b>Natural digestive fire pattern (TM2)</b><br>"It is a natural digestive fire and the increase and decrease of this fire can be classified as Toxic Digestive Fire, Strong Digestive Fire, Weak Digestive Fire<br>"                                                                                                                                                                                                                                                          |
| <b>SS17</b> | <b>Strong digestive fire pattern (TM2)</b><br>This disequilibrium is characterized by the unusual combination of Vayu for homeostasis and Azal which produce excessive heat increasing the digestive process where even half-cooked gets digested.                                                                                                                                                                                                                            |
| <b>SS18</b> | <b>Toxic digestive fire pattern (TM2)</b><br>This disequilibrium is characterised by displacement of Vayu for homeostasis and excessive toxic heat formation causing indigestion.                                                                                                                                                                                                                                                                                             |
| <b>SS19</b> | <b>Weak digestive fire pattern (TM2)</b><br>This disequilibrium is characterized by Vayu for homeostasis which combines with Aiyam and the consequent production of heat that is dull and causes slow digestion of food, flatulence due to vayu, gas trouble with turbulent sound in stomach and intestines, and heaviness of the body.                                                                                                                                       |
| <b>SS1Y</b> | <b>Other specified digestive fire based patterns (TM2)</b>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>SS1Z</b> | <b>Digestive fire based patterns (TM2), unspecified</b>                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Chronic accumulation patterns (TM2) (SS20-SS2Z)

**SS20**

### **Suppression of breath pattern (TM2)**

Pattern characterized by cough, flatulence of the stomach, anorexia, intolerable pain, fever, and excessive perineal heat.

**SS21**

### **Suppression of yawning pattern (TM2)**

Pattern characterized by the tiredness of the face, exertion, indigestion while proper food intake, stupor, heaviness of head, eyes, pain all over the body

**SS22**

### **Suppression of hunger and thirst together pattern (TM2)**

Pattern characterized by the diminished and improper function of the organs, acute excruciated pain of the abdomen, back, and waist, mental confusion, weakness and muscle wasting of the body, dullness of the face, and diseases of the joint.

**SS23**

### **Suppression of semen pattern (TM2)**

Pattern characterized by fever, anuria, knee joint pain, chest pain, and pain present over one-sided upper and lower extremities, penile pain, pain in scrotum, generalised bodyache, precordial pain/cardiac pain, obstruction/retention in passage of urine/oliguria, swelling in the bladder, swelling in anus, swelling in the scrotum, pain in bladder and pain in anus.

**SS24**

### **Suppression of cough pattern (TM2)**

Pattern characterized by continuous cough, difficulty in breathing, and thoracic patterns.

**SS25**

### **Suppression of micturition pattern (TM2)**

Pattern characterized by retention of urine, ulceration in the urethral passage, pain in the joints and genitals, gaseous distension of the abdomen, and accumulation of pus or blood in the urethral meatus with ulcers extending the muscle layer, burning sensation in the urethral meatus, pain in urinary bladder, penile pain, dysuria, severe headache, flexion/ bending of body, distention in groins, drop by drop urination, severe pain in anus, pain in groins and severe pain in scrotum.

**SS26**

### **Suppression of sleep pattern (TM2)**

Pattern characterized by the heaviness of the head, redness of eyes, temporary hearing loss, and blathering, yawning, generalised bodyache, drowsiness/lassitude, diseases of head, heaviness of eyes, rigidity/stiffness of the body, heaviness of head, confusion/delirium and lethargy.

**SS27**

### **Suppression of sneeze pattern (TM2)**

Pattern characterized by headache, facial deviation, pain in the hip joints, and feels as though tottering five sense organs and motor functions, torticollis/stiffness of neck, headache, facial paralysis, hemcranial headache, impairment of sense organs, diseases of head, diseases of eyes, diseases of nose, diseases of ear, feeling of fullness in throat, feeling of fullness in mouth and severe pricking pain in throat.

**SS28**

**Suppression of tears pattern (TM2)**

Pattern characterized by pain in the chest, sinusitis, eye diseases, and wounds in the head, cold, catarrh, diseases of eyes, heart diseases, tastelessness, giddiness or dizziness, heaviness of head/ headache, cold, catarrh, torticollis/stiffness of neck and palpable glandular enlargement in abdomen/ abdominal lump.

**SS29**

**Suppression of vomiting pattern (TM2)**

Pattern characterized by the induration of the skin, itching, anaemia, eye problems, wheezing, fever, and cough, itching, wheal like skin eruptions, tastelessness, blackish circular patches on face, oedema, fever, skin disease, nausea, spreading cellulitis/erysipelas, diseases of eyes, itching, cough, and breathlessness/difficult breathing

**SS2A**

**Suppression of stool pattern (TM2)**

Pattern characterized by the feculent vomiting, respiratory illness, knee joint pain, headache, flatulence, and weakness, pain in rectum, headache, suppression of flatus, suppression of faeces, calf claudication/cramp in the calf muscles, abdominal distension, gurgling sound of the intestines/ barborygmus, colicky pain in the abdomen, cutting type of pain in anus, obstruction/retention to the passage of faeces

**SS2B**

**Suppression of exertional hyperpnea pattern (TM2)**

Pattern characterized by occurrence of diseases of heart, loss of consciousness.

**SS2C**

**Suppression of hunger pattern (TM2)**

Pattern characterized by emaciation, weakness, discolouration, generalised bodyache, tastelessness, giddiness or dizziness, drowsiness/lassitude, diminished vision, breaking type of pain in the body, fatigue in mind and body, pain.

**SS2D**

**Suppression of thirst pattern (TM2)**

Pattern characterized by dryness in the throat, dryness in mouth, deafness/ hearing impairment, exhaustion/fatigue, exhaustion or tiredness of body, precordial pain/cardiac pain, dryness/wasting/emaciation, unconsciousness/ confusion, giddiness or dizziness, diseases of heart

**SS2E**

**Suppression of flatus pattern (TM2)**

Pattern characterized by retention of faeces, obstruction/retention in passage of urine, retention of flatus, abdominal distension, pain, exhaustion without exertion, diseases of abdomen, colicky pain in the abdomen, feeling of obstruction in the precordial region/impairment of cardiac activity, headache, increased respiration/ dyspnoea, hiccup, cough, cold, catarrh, choking sensation in throat, diminution in quantity of stools, loss of digestive power

**SS2F**

**Pattern of humour accumulated with air (TM2)**

Three life humours accumulated with air manifest different types of symptoms individually

**SS2G**

**Pattern of humour accumulated with excess cold (TM2)**

Three life humours accumulated with excess cold manifest different types of symptoms individually

**SS2H**

**Pattern of humour accumulated with excess heat (TM2)**

Three life humours accumulated with excess heat manifest different types of symptoms individually

**SS2Y**

**Other specified chronic accumulation patterns (TM2)**

**SS2Z**

**Chronic accumulation patterns (TM2), unspecified**

**Power derangement patterns (TM2) (SS30-SS3Z)**

**SS30**

**Physical faculties derangement pattern (TM2)**

Derangement of power / faculty serving the functions of nutrition, growth, reproduction and evacuation of waste products from the body for the preservation of individual as well as species.

**SS31**

**Nutritive faculty derangement pattern (TM2)**

Derangement of power/faculty making alteration in the food in such a manner that it becomes temperamentally similar to the body and suitable to replace the daily wear and tear

**SS32**

**Collecting faculty derangement pattern (TM2)**

Derangement of power/faculty which selects and collects the matter for digestion

**SS33**

**Adhesive faculty derangement pattern (TM2)**

Derangement of power/faculty which attaches the digested matter to the organs for their nutrition

**SS34**

**Assimilation faculty derangement pattern (TM2)**

Derangement of power/faculty, which transforms the matter attached to the organ by adhesive faculty in such a way that it resembles the nourished organ in all respects and becomes a part of that organ

**SS35**

**Absorptive faculty derangement pattern (TM2)**

Derangement of power/faculty, which serves the nutritive faculty and absorbs the beneficial material into the organs

**SS36**

**Retentive faculty derangement pattern (TM2)**

Derangement of power/faculty, which serves the nutritive faculty and retains the dietary material in organs till the digestive faculty completes its work

**SS37**

**Digestive faculty derangement pattern (TM2)**

Derangement of power/faculty, which serves the nutritive faculty and digests the dietary material to make it a part of an organ

|             |                                                                                                                                                                                                                                                                                                                                                   |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SS38</b> | <b>Expulsive faculty derangement pattern (TM2)</b><br>Derangement of power/faculty, which serves the nutritive faculty and expels the waste products from organs outside the body                                                                                                                                                                 |
| <b>SS39</b> | <b>Growth faculty derangement pattern (TM2)</b><br>Derangement of power/faculty, which develops the organs in the required form and size and integrates the nutrient material to complete the individual development                                                                                                                              |
| <b>SS3A</b> | <b>Reproductive faculties derangement pattern (TM2)</b><br>Derangement of primary physical faculties provided to an individual for preservation of its species                                                                                                                                                                                    |
| <b>SS3B</b> | <b>Vital faculty derangement pattern (TM2)</b><br>Derangement of faculty, which is essential for life and reaches from heart to the body organs through arteries and keeps them alive                                                                                                                                                             |
| <b>SS3C</b> | <b>Psychic faculties derangement pattern (TM2)</b><br>Derangement of faculty which is furnished in an individual for the sensory/perceptive and motor/motive function of the body, it controls the nervous tissues to perform the functions of sensation/perception and regulates the nervous system for motor activity                           |
| <b>SS3D</b> | <b>Debility of organs pattern (TM2)</b><br>Debility of organs is caused by deficiency of power/ Rūḥ/ temperament derangement /composition derangement of organs; Apart from these immediate causes, debility of organs can also be due to pain, fevers, excessive hunger etc. It is characterised by non optimal functions of the affected organ. |
| <b>SS3E</b> | <b>Innate heat weakness pattern (TM2)</b><br>An innate heat pattern characterized by weakness of the innate heat that results in physical weakness and susceptibility to diseases.                                                                                                                                                                |
| <b>SS3F</b> | <b>Disruption of innate heat pattern (TM2)</b><br>An innate heat pattern characterized by a decrease in the innate heat to the point of life-threatening diseases.                                                                                                                                                                                |

| <b>SS3H</b> | <b>Weakness of natural spirit pattern (TM2)</b><br>A Rūḥ pattern characterized by decreased quantity and weakness of the physical Rūḥ that results in non optimal functioning of the physical power/faculty (e.g., growth, providing organs with necessary nutrients)                                                                             |

**SS3J****Weakness of vital spirit pattern (TM2)**

A Rūh pattern characterized by decreased quantity and weakness of the vital Rūh that results in non optimal functioning of the vital power/faculty (e.g., distribution of blood by the heart).

**SS3Y****Other specified power derangement patterns (TM2)****SS3Z****Power derangement patterns (TM2), unspecified****SS4Y****Other specified power derangement and chronic accumulation patterns (TM2)****SS4Z****Power derangement and chronic accumulation patterns (TM2), unspecified****Body constitution and temperament patterns (TM2) (SS50-ST1Z)**

This group enlists patterns based on inherent nature, body constitution or temperament of a person formed at the time of conception which is considered to stay consistent throughout the lifetime and specific states viz., age.. The Sub Section dealing with "temperament derangement" enlists patterns representing derangement at the level of qualitative understanding of body components, temperament. They aid in the assessment of the qualities and quantities of all the participating primary components in a compound which are not in accordance with the natural needs. Understanding of underlying pathology at this level helps in pinpointing the diagnosis and make prudent therapeutic choices. Overall understanding of these patterns aid in specific measures for managing disorders and maintenance of quality of life throughout the lifespan.

**Constitution patterns (TM2) (SS50-SS5Z)****SS50****Vata constitution pattern (TM2)**

The pattern is characterized by thin built, too tall or too short stature, prominent tendons and veins, dusky or dark complexion, dry and non lustrous skin, cracked soles and palms, unstable joints, sound from joints on movement, prominently visible calf muscles, small, rounded, dull, sunken & dry eyes, dull white sclera, unsteady gaze, eyes remains half open during sleep, rough, dry, split hair ends, dusky hair, dry, rough & small teeth, excess teeth; small, thin, rough & dry nails, excessive nail growth, speedy gait, quick initiation & completion of actions, inconsistent actions, feeble, unpleasant, shattered & broken voice, fast & unclear speech, stammering, hoarseness of voice, too high pitched or too low pitched voice, fast eating habit, frequently gets hungry, easy awakening from sleep, reduced sleep, snoring, grinding of teeth during sleep, having dreams of walking / flying in the sky / mountains / dried water bodies / trees, indecisiveness, quick comprehension but less & unstable memory, having few friends/ unstable friendship, ungratefulness, fondness for travelling, music, dancing, humour, tradition, history, gardens, luxurious life, reading & listening to texts, fond of sweet, sour & saline taste, fond of sudation and massage, talkativeness, irrelevant talking, reduced tolerance, easily frightened, intolerance to cold, desirous of hot foods and drinks, jealousy, tendency to steal, hide or plagiarize, aversion to cold

**SS51****Pitta constitution pattern (TM2)**

The pattern is characterized by delicate body, fair complexion with yellowish tinge, presence of moles, pimples & freckles, early appearance of wrinkles, warm feeling of body on touch, tendency for frequent ulceration of mouth, delicate & lax joints, laxity of muscles, coppery eyes, few & thin eye lashes, eyes get easily reddened upon getting angry or exposure to sunlight, soft, scanty, reddish brown hair, premature graying of hair, baldness, coppery colored nails, frequent feeling of hunger, intense feeling of hunger and thirst, drinks more water, frequently gets thirsty, easy bowel evacuation, profuse sweating, increased body odor especially from axilla, scalp, mouth, having frequent dreams of fire, lightening, gold, red flowers & falling of meteors, good intelligence, short tempered nature, fondness for consuming food of sweet, bitter & astringent taste, capable of placing one's views strongly in debates, profound oratory, intolerance to heat, desire for cold, affectionate to dependents, valor, purity of thought, deeds, having competitive spirit

**SS52****Kapha constitution pattern (TM2)**

The pattern is characterized by well built proportionate body, cheerful & pleasing appearance, broad forehead, body complexion resembling lotus, straw or gold, smooth & clear skin, compact joints, well-built muscles, big elongated eyes, milky white & clearly distinguished sclera, dense eye lashes, steady gaze, oily, curly, dense, black hair, steady gait, slow in activities, clear, deep & pleasant voice, having less appetite & thirst, having ability to tolerate hunger & thirst, slow speed of eating, less sweating, likes to sleep, having dreams of water bodies, lotus, water birds like swan, having delayed comprehension & grasping power, having good memory, stable & cordial in friendship, delayed initiation of activities, having self control, do not get agitated quickly, staying calm and patient, fore-sightedness, virtuousness, fondness for music, likes pungent taste, limited in speech, relevant and thoughtful in speech, truthfulness, soft spokenness, endowed with forgiveness, respectful towards teachers & elders, strong in enmity, humble, dignified and thoughtful in nature, generous and judicious nature.

**SS53****Vata-Pitta constitution pattern (TM2)**

having combined features of vata and pitta constitution

**SS54****Pitta-Kapha constitution pattern (TM2)**

having combined features of pitta and kapha constitution

**SS55****Kapha-Vata constitution pattern (TM2)**

having combined features of kapha and vata constitution

**SS56****Body constitution with a predominance of all three dosha pattern (TM2)**

having combined features of vata, pitta and kapha constitution

**SS57**

**Vaḷi body constitution pattern (TM2)**

This constitutional pattern is described as tall and slim body built with darkish complexion, dull eyes with black and white tint, thick eyebrows, dark hair with split hair ends, bulky thigh, crepitus of knee while walking, fluctuating speech nature showing clarity of speech one time and in another time with agitated or blabbering speech, increased intake of food but having less stamina, virility and strength, sleeping with half opened eyes, dreaming as if walking in the sky, mountains or forest, mild affinity to warm foods, sweet, sour, and salty articles, dislikes chilled and cold food articles.

**SS58**

**Aḷal body constitution pattern (TM2)**

This constitutional pattern is described as medium body built with yellow or reddish tinged complexion, slightly wrinkled skin, scanty body hair, thin eye lashes, premature greying, presence of moles and pimples in the body. There will be always warmth in the body on touch, excessive sweating and body odour. Eyes become easily reddened on hunger, thirst, and after exposure to sun. Intolerant to hunger, thirst, anger, heat and fear, medium libido, fond of sandal cosmetics, floral garlands, and dew, likes sweet, astringent, bitter and cold food articles. The person in attitude shows bravery, revenging mentality, respectful, loving, compassionate, and disciplined. The person will be highly intelligent and cognitive, and while sleeping occasionally dreams on lightning, fire, and sun.

**SS59**

**Aiyam body constitution pattern (TM2)**

This constitutional pattern is described as well built, bulkiness, pleasing appearance, broad forehead and chest, complexion of the body similar to a lotus or with golden hue, unctuous and smooth clear skin without moles, freckles and dryness etc, big and elongated beautiful eyes with thick and dense eyelashes, milky white sclera, oily, curly dark hair, firm and steady gait, clear and pleasant voice, prefers warm food, bitter, astringent, and pungent food articles, less food intake but more activity and stamina, tolerant to thirst, appetite, heat, and stress, fond of music, increased strength and libido, The person in attitude shows good qualities, intelligent, high morality, ethics, respects elderly, friendship, and while sleeping occasionally dreams on water bodies, lotus, cool mountains water birds like swan

**SS5A**

**Vaḷi-predominant Aḷal body constitution pattern (TM2)**

This constitutional pattern is described as slim body with dark complexion, sexual desire, short temperness, speaks harshly and fond of astringent and pungent tasted food articles.

**SS5B**

**Vaḷi-predominant Aiyam body constitution pattern (TM2)**

This constitutional pattern is described as slim body with dark complexion, sexual desire, short temperness, speaks harshly and fond of astringent and pungent tasted food articles.

**SS5C**

**Aḷal-predominant Vaḷi body constitution pattern (TM2)**

This constitutional pattern is described as pale or reddish complexion with dryness of the body, likes scented articles, sweet voice, intelligent, and fond of pungent and sour tasted food articles.

**SS5D**

**Azal-predominant Aiyam body constitution pattern (TM2)**

This constitutional pattern is described as skin complexion resembling michaelia champaca flower, increased sexual desire, melodious voice, respectful and with good moral qualities, fond of sour and sweet tasted food articles.

**SS5E**

**Aiya-predominant Azal body constitution pattern (TM2)**

This constitutional pattern is described as fatty or bulky natured body built with reddish or greenish tint complexion, reddish tinted body hairs, bursted (cracked) voice, courage, truthfulness, fame, fond of sweet and sour tasted food articles.

**SS5F**

**Aiya-predominant Vali body constitution pattern (TM2)**

This constitutional pattern is described as bulky body built with blackish and reddish complexion, interested in sexual activities, courage, intelligent and multiskilled, fond of sour and pungent tasted food articles

**SS5Y**

**Other specified constitution patterns (TM2)**

**SS5Z**

**Constitution patterns (TM2), unspecified**

**Personality patterns (TM2) (SS60-SS6Z)**

**SS60**

**Personality with a calm, composed mindset (TM2)**

Personality with a knowledge-seeking, respectful, law-abiding, courageous, generous, patient, tolerant, calm, artistic and composed disposition.

**SS61**

**Personality with an agitated, reactive mindset (TM2)**

Personality with anger, jealousy, wavering braveness and timidity, sorrowfulness, overeating, hypersexuality, agitated and reactive disposition.

**SS62**

**Personality with a confused, negative mindset (TM2)**

Personality with a dullness, crookedness, immediate gratification, negative attitude, fickleness, foolishness, cowardice, confusion and negative disposition.

**SS6Y**

**Other specified personality patterns (TM2)**

**SS6Z**

**Personality patterns (TM2), unspecified**

**Temperament based patterns (TM2) (SS70-SS7Z)**

**SS70**

**Human temperament pattern (TM2)**

The temperament of human being which is considered to be the most perfect and noble in comparison with all other species. This temperament is inclined towards heat.

**SS71**

**Temperament according to age pattern (TM2)**

The temperament of an individual in different phases of life.

**SS72****Dam predominant temperament pattern (TM2)**

A type of temperament caused by the predominance of Dam in the body which is hot and moist. The individuals with this type of temperament have strong built, full pulse, pinkish colour of skin, etc.

**SS73****Şafrā' predominant temperament pattern (TM2)**

A type of temperament caused by the predominance of Şafrā' in the body which is hot and dry. The individuals with this type of temperament have thin built, yellow colour of skin and rapid pulse, etc.

**SS74****Balgham predominant temperament pattern (TM2)**

A type of temperament caused by the predominance of Balgham in the body which is cold and moist. The individuals with this type of temperament have fatty body, excessive sleep, whitish colour of skin, etc.

**SS75****Sawdā' predominant temperament pattern (TM2)**

A type of temperament caused by the predominance of Sawdā' in the body which is cold and dry. The individuals with this type of temperament have thin built with prominent veins, dry and blackish colour of skin, etc.

**SS7Y****Other specified temperament based patterns (TM2)****SS7Z****Temperament based patterns (TM2), unspecified****Age dependent patterns (TM2) (SS80-SS8Z)****SS80****Kapha predominant age pattern (TM2)**

The pattern is characterized by kapha dominant stage of life from birth to sixteen years, immaturity of body, low physical & mental endurance, having increased susceptibility to kapha predominant conditions.

**SS81****Pitta predominant age pattern (TM2)**

The pattern is characterized by pitta dominant stage of life from seventeen years to sixty years, relatively stable in terms of well-formed structural elements, good physical and mental endurance, having increased susceptibility to pitta predominant conditions.

**SS82****Vata predominant age pattern (TM2)**

The pattern is characterized by vata dominant stage of life above sixty years of age, overall decline in terms of physical, mental strength, having increased susceptibility to vata predominant conditions.

**SS83****Childhood age pattern (TM2)**

It extends from birth to ten years and characterized by the child prone for crying, hiccup, vomiting, flatulence, abdominal bloating, gastrointestinal upsets, respiratory conditions and urogenital problems. It falls in Vali predominant age segment of first 33 years in life.

**SS84****Adult age pattern (TM2)**

It extends from eleven years to fifty years and it is characterized by decline of lustre of the body after 30 years, decline of beauty after 40 years, and decline of physique after 50 years due to combination of primordial water element and primordial earth element. It is in Vali predominant age usually last for first 33 years and Azhal predominant age usually last for second 33 years

**SS85****Old age pattern (TM2)**

It extends from fifty one years to hundred years characterized by greying of hair, declining of vision and walk after 60 years due to combination of primordial water and fire elements, decline in physical, mental strength after 70 years due to combination of primordial fire and air elements and increased susceptibility to more disease and breathlessness after 80 years due to combination of primordial air and ether elements. This part of life period spans during the Azal and Aiyam phase of centennial years of life expectancy.

**SS86****Hot and moist predominant temperament age pattern (TM2)**

It extends from birth up to thirty years and is characterized by vulnerability to disorders related to teething, mouth ulcers, cough, vomiting, inflammation of umbilicus, diarrhea, spasms, worm infestation, abscesses, pharyngitis, lymphadenopathies etc

**SS87****Hot predominant temperament with lesser degree of moistness age pattern (TM2)**

It extends from thirty to forty years of age is characterized by vulnerability to disorders like haemoptysis, epilepsy, fevers, phthisis, etc.

**SS88****Cold and dry predominant temperament age pattern (TM2)**

It extends from forty to sixty years of age is characterized by vulnerability to bronchial asthma, pleurisy, inflammation of lungs, fever accompanied with insomnia, fever accompanied with delirium, Hectic fever, prolonged loose motions, lenteric diarrhea, intestinal abrasions, rupture of blood vessels

**SS89****Cold predominant temperament with greater degree of dryness age pattern (TM2)**

It extends from sixty years of age onwards and is characterized by vulnerability to respiratory disorders, joint pain, vertigo, unconsciousness, insomnia, diminished vision, diminished hearing, delayed healing ulcers

**SS8Y****Other specified age dependent patterns (TM2)****SS8Z****Age dependent patterns (TM2), unspecified****ST00****Abnormal temperament pattern (TM2)**

Deranged temperament caused by any intrinsic or extrinsic factor leading to a temperament not in accordance to natural needs, characterized by specific symptoms of dominating qualities i.e. hotness, coldness, moistness and dryness

**ST01**

**Simple morbid temperament pattern (TM2)**

Deranged temperament having any one of two active and two passive qualities as dominant quality caused by any intrinsic or extrinsic factor leading to an impaired temperament not in accordance to natural needs, characterized by specific symptoms of that dominating quality i.e. hotness, coldness, moistness and dryness

**ST02**

**Simple abnormal temperament without substance pattern (TM2)**

Deranged temperament having any one of two active and two passive qualities as dominant quality without involvement of matter caused by any intrinsic or extrinsic factor leading to an ill temperament not in accordance to natural needs, characterized by specific symptoms of that dominating quality i.e. hotness, coldness, moistness and dryness

**ST03**

**Abnormal hot temperament pattern (TM2)**

Deranged temperament where hotness is dominant quality caused by any intrinsic or extrinsic factor, characterized by specific symptoms of dominant heat e.g. burning sensation in the body, excessive thirst, bitter taste in mouth, rapidity of pulse etc.

**ST04**

**Abnormal cold temperament pattern (TM2)**

Deranged temperament where coldness is dominant quality caused by any intrinsic or extrinsic factor, characterized by specific symptoms of dominant coldness e.g. slow digestion, lesser thirst and flaccidity of joints etc.

**ST05**

**Abnormal moist temperament pattern (TM2)**

Deranged temperament where moistness is dominant quality caused by any intrinsic or extrinsic factor, characterized by specific symptoms of dominant moistness e.g. softness of the body, excessive salivation, frequent motions, excessive sleep and edema of eye lids etc.

**ST06**

**Abnormal dry temperament pattern (TM2)**

Deranged temperament where dryness is dominant quality caused by any intrinsic or extrinsic factor, characterized by specific symptoms of dominant dryness e.g. dry skin, insomnia and liking for wet and humectant items etc.

**ST07**

**Abnormal temperament associated with substance pattern (TM2)**

Deranged temperament in which, the specific state of equilibrium is disturbed due to change in the specific ratio of quantity and quality of humours locally or generally.

**ST08**

**Abnormal hot temperament with substance pattern (TM2)**

Hot deranged temperament with involvement of matter caused by any intrinsic or extrinsic factor leading to an ill temperament not in accordance to natural needs, characterized by specific symptoms of hot temperament eg. burning sensation in the body, excessive thirst, bitter taste in mouth, rapidity of pulse etc.

**ST09**

**Abnormal cold temperament with substance pattern (TM2)**

Deranged temperament cold caused by predominance of cold substances, characterized by specific symptoms of cold temperament eg. slow digestion, lesser thirst and flaccidity of joints etc.

**ST0A**

**Abnormal moist temperament with substance pattern (TM2)**

Deranged temperament caused by predominance of moist substances, characterized by specific symptoms of moist substance e.g. flabbiness of the body, excessive salivation, frequent motions, excessive sleep and edema of eye lids etc.

**ST0B**

**Abnormal dry temperament with substance pattern (TM2)**

Dry deranged temperament caused by predominance of dry substances, characterized by specific symptoms of dry substance e.g. dry skin, insomnia and liking for wet and humectant items etc.

**ST0C**

**Compound morbid temperament pattern (TM2)**

Deranged temperament having dominance of combination of two (one active and one passive) of four qualities i.e. hotness, coldness, moistness, caused by any intrinsic or extrinsic factor leading to an ill temperament not in accordance to natural needs, characterized by specific symptoms of that dominant combination of qualities

**ST0D**

**Simple compound abnormal temperament pattern (TM2)**

Deranged temperament having dominance of combination of two (one active and one passive) of four qualities i.e. hotness, coldness, moistness and dryness, caused by any intrinsic or extrinsic factor leading to an ill temperament without involvement of substance, characterized by specific symptoms of that dominant combination of qualities

**ST0E**

**Simple hot and moist abnormal temperament pattern (TM2)**

Deranged temperament where combination of hotness and moistness are dominant quality without involvement of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant hot and moist temperament

**ST0F**

**Simple hot and dry abnormal temperament pattern (TM2)**

Deranged temperament where combination of hotness and dryness are dominant quality without involvement of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant hot and dry temperament

**ST0G**

**Simple cold and moist abnormal temperament pattern (TM2)**

Deranged temperament where combination of coldness and moistness are dominant quality without involvement of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant cold and moist temperament

**ST0H**

**Simple cold and dry abnormal temperament pattern (TM2)**

Deranged temperament where combination of coldness and dryness are dominant quality without involvement of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant cold and dry temperament

**ST0J**

**Compound abnormal temperament associated with substance pattern (TM2)**

Deranged temperament having dominance of combination of two (one active and one passive) of four qualities i.e. hotness, coldness, moistness and dryness, caused by any intrinsic or extrinsic factor leading to an ill temperament with involment of substance, characterized by specific symptoms of that dominat combination of qualities

**ST0K**

**Abnormal hot and moist temperament associated with substance pattern (TM2)**

Deranged temperament where combination of hotness and moistness are dominant quality with involment of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant hot and moist temperament

**ST0L**

**Abnormal hot and dry temperament associated with substance pattern (TM2)**

Deranged temperament where combination of hotness and dryness are dominant quality with involment of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant hot and dry temperament

**ST0M**

**Abnormal cold and moist temperament associated with substance pattern (TM2)**

Deranged temperament where combination of coldness and moistness are dominant quality with involment of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant cold and moist temperament

**ST0N**

**Abnormal cold and dry temperament associated with substance pattern (TM2)**

Deranged temperament where combination of coldness and dryness are dominant quality with involment of substance, caused by any intrinsic or extrinsic factor, characterized by combined symptoms of dominant cold and dry temperament

**ST0P**

**Stable abnormal temperament pattern (TM2)**

Deranged temperament caused by prolonged exposure to factors altering normal temperament of the body to their qualities which can not be corrected easily, characterized by specific symptoms of that particular temperament which does not get corrected easily

**ST0Q**

**Unstable abnormal temperament pattern (TM2)**

Deranged temperament caused by exposure to factors altering normal temperament of the body to their specific qualities which can be corrected easily, characterized by specific symptoms of that particular temperament which gets corrected easily

**ST0R**

**Thickening of moisture pattern (TM2)**

A condition in which there is thickening or increased viscosity of body fluids.

|             |                                                                                                                                                                                                                                                                                                                                                          |

| <b>ST10</b> | <b>Predominance of moistness pattern (TM2)</b><br>A pattern characterized by softer skin, loose body, intolerance to things of moist nature and excessive salivation.                                                                                                                                                                                    |
| <b>ST11</b> | <b>Predominance of dryness pattern (TM2)</b><br>A pattern characterized by dry and rough skin, desire for moist things, insomnia, etc.                                                                                                                                                                                                                   |
| <b>ST1Y</b> | <b>Other specified body constitution and temperament patterns (TM2)</b>                                                                                                                                                                                                                                                                                  |
| <b>ST1Z</b> | <b>Body constitution and temperament patterns (TM2), unspecified</b>                                                                                                                                                                                                                                                                                     |

## Varmam and Marmam patterns (TM2) (ST20-ST2Z)

This group enlists patterns arising due to trauma or pressure at vulnerable, vital locations or points which are known as Varmam (Siddha), Marma (Ayurveda). This may lead to deranged, diminished energy in these points leading to morbidity if not attended in time.

### ST20

#### **Injury pattern in the varmam or marmam (TM2)**

The pattern of injury to vital points characterised by dizziness, delirium, impairment of sensory perception, fatigue.

(AYU) aggravation of all the three dosha affecting the vital life.

(SID) It is caused due to the injury to the varmam points with particular force causing derangement of Vali , Azal , Aiyam affecting the flow of vital life energy

### ST2Y

#### **Other specified varmam and Marmam patterns (TM2)**

### ST2Z

#### **Varmam and Marmam patterns (TM2), unspecified**

# CHAPTER V

---

## Supplementary section for functioning assessment

This chapter has 120 four-character categories.

Code range starts with VD00

The section allows for creating functioning profiles and overall functioning scores of individuals, which are suitable to describe and quantify the level of functioning associated with a health conditions.

To guide functioning assessment, the section includes two ICF-based instruments developed by WHO: the WHO Disability Assessment Schedule (WHODAS 2.0 36-item version), and the Model Disability Survey (MDS).

The section is complemented by a generic set of functioning categories of high explanatory power derived from the ICF Annex 9.

This chapter contains the following top level blocks:

- WHODAS 2.0 36-item version
- Brief Model Disability Survey
- Generic functioning domains

### WHODAS 2.0 36-item version

This subsection includes the domains and questions for use with the WHO Disability Assessment Schedule 2.0 (WHODAS 2.0) 36 item version. The WHODAS 2.0 captures an individual's level of functioning in six major life domains of the "activity and participation" dimension: cognition, mobility, self-care, getting along, life activities and participation in society. For all domains, the WHODAS 2.0 36-item version provides domain-specific and overall summary score of functioning. The table below provides the classification of severity of the functioning problem, based on the response received to the question related to the relevant functioning category. For coding, the relevant additional digit is added after the decimal point to the code of the relevant functioning category.

| <b>additional digit</b> | <b>Level of functioning problem</b> |
|-------------------------|-------------------------------------|
|-------------------------|-------------------------------------|

|    |                      |
|----|----------------------|
| .0 | None (no problem)    |
| .1 | Mild                 |
| .2 | Moderate             |
| .3 | Severe               |
| .4 | Extreme or cannot do |

## Cognition [WHODAS]

**VD00**

### **Attention functions [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in concentrating on doing something for ten minutes?

**VD01**

### **Memory functions [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in remembering to do important things?

**VD02**

### **Solving problems [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in analysing and finding solutions to problems in day to day life?

**VD03**

### **Basic learning [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in learning a new task, for example, learning how to get a new place?

**VD04**

### **Communicating with - receiving - spoken messages [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in generally understanding what people say?

**VD05**

### **Conversation [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in starting and maintaining a conversation?

## Mobility [WHODAS]

**VD10**

### **Maintaining a standing position [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in standing for long periods such as 30 minutes?

**VD11**

### **Changing body position - standing [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in standing up from sitting down?

**VD12**

### **Moving around within the home [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in moving around inside your home?

**VD13**

### **Moving around outside the home and other buildings [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in getting out of your home?

**VD14**

**Walking [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in walking a long distance such as a kilometre (or equivalent)?

Self-care [WHODAS]

**VD20**

**Washing oneself [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in washing your whole body?

**VD21**

**Dressing [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in getting dressed?

**VD22**

**Eating [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in eating?

**VD23**

**Carrying out daily routine [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in staying by yourself for a few days?

Getting along [WHODAS]

**VD30**

**Relating with strangers [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in dealing with people you do not know?

**VD31**

**Informal relationship with friends - maintaining [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in maintaining a friendship?

**VD32**

**Family relationships [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in getting along with people who are close to you?

**VD33**

**Informal relationship with friends - making new friends [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in making new friends?

**VD34**

**Intimate relationships [WHODAS]**

Because of your health condition, in the past 30 days, how much difficulty did you have in sexual activities?

Life activities [WHODAS]

|               |                                                                                                                                                                                                                  |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>VD40</b>   | <b>Taking care of household responsibilities [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in taking care of your household responsibilities?          |
| <b>VD41</b>   | <b>Doing most important household tasks [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in doing most important household tasks well?                    |
| <b>VD42</b>   | <b>Doing housework [WHODAS]</b>                                                                                                                                                                                  |
| <b>VD42.0</b> | <b>Getting all needed housework done [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in getting all the household work done that you need to do?         |
| <b>VD42.1</b> | <b>Getting household work done quickly [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in getting your household work done as quickly as needed?         |
| <b>VD42.Y</b> | <b>Other specified doing housework [WHODAS]</b>                                                                                                                                                                  |
| <b>VD42.Z</b> | <b>Doing housework [WHODAS], unspecified</b>                                                                                                                                                                     |
| <b>VD43</b>   | <b>Remunerative employment [WHODAS]</b>                                                                                                                                                                          |
| <b>VD43.0</b> | <b>Difficulties in daily work or school [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in your day to day work/school?                                  |
| <b>VD43.1</b> | <b>Doing most important work or school task [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in doing your most important work/school tasks well?         |
| <b>VD43.2</b> | <b>Getting all needed work or school work done [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in getting all the work done that you need to do?         |
| <b>VD43.3</b> | <b>Getting remunerative work or school work done quickly [WHODAS]</b><br>Because of your health condition, in the past 30 days, how much difficulty did you have in getting your work done as quickly as needed? |
| <b>VD43.Y</b> | <b>Other specified remunerative employment [WHODAS]</b>                                                                                                                                                          |
| <b>VD43.Z</b> | <b>Remunerative employment [WHODAS], unspecified</b>                                                                                                                                                             |

## Participation and impact of health problems [WHODAS]

**VD50**

### **Recreation and leisure [WHODAS]**

In the past 30 days, how much of a problem did you have in joining in community activities (for example: festivities, religious or other activities) in the same way as anyone else can?

**VD51**

### **Problems by barriers [WHODAS]**

In the past 30 days, how much of a problem did you have because of barriers or hindrances in the world around you?

**VD52**

### **Human rights [WHODAS]**

In the past 30 days, how much of a problem did you have living with dignity because of the attitudes and actions of others?

**VD53**

### **Time spent on health condition [WHODAS]**

In the past 30 days, how much time did you spend on your health condition, or its consequences?

**VD54**

### **Emotional effect of health condition [WHODAS]**

In the past 30 days, how much have you been emotionally affected by your health condition?

**VD55**

### **Health drain on financial resources [WHODAS]**

In the past 30 days, how much has your health been a drain on the financial resources of you or your family?

**VD56**

### **Health problems causing family problems [WHODAS]**

In the past 30 days, how much of a problem did your family have because of your health problems?

**VD57**

### **Problems in relaxation or pleasure [WHODAS]**

In the past 30 days, how much of a problem did you have in doing things by yourself for relaxation or pleasure?

## Brief Model Disability Survey

This subsection includes the domains and questions for use with the WHO Model Disability Survey (MDS) brief version. The brief MDS includes body functions as well as activities and participation categories. The brief MDS allows to generate an overall summary score of functioning.

**VE00**

### **Seeing and related functions [BMDS]**

How much difficulty do you have seeing things at a distance [without glasses]?

**VE01**

### **Hearing and vestibular functions [BMDS]**

How much difficulty do you have hearing [without hearing aids]?

Mental functions [BMDS]

**VE10**            **Energy and drive functions [BMDS]**

**VE11**            **Sleep functions [BMDS]**

**VE12**            **Emotional functions [BMDS]**

**VE13**            **Attention functions [BMDS]**

**VE14**            **Memory functions [BMDS]**

Sensory functions and pain [BMDS]

**VE20**            **Sensation of pain [BMDS]**

## Generic functioning domains

This subsection contains a generic set of functioning categories of high explanatory power derived from the ICF Annex 9.

Mental functions

This chapter is about the functions of the brain: both global mental functions, such as consciousness, energy and drive, and specific mental functions, such as memory, language and calculation mental functions.

**VV00**            **Energy and drive functions**

General mental functions of physiological and psychological mechanisms that cause the individual to move towards satisfying specific needs and general goals in a persistent manner.

**Exclusions:**            Consciousness functions (VV00-VV0Z)  
                                 Emotional functions (VV04)  
                                 Psychomotor functions (VV00-VV0Z)  
                                 Sleep functions (VV01)  
                                 Temperament and personality functions (VV00-VV0Z)

**VV01**            **Sleep functions**

General mental functions of periodic, reversible and selective physical and mental disengagement from one's immediate environment accompanied by characteristic physiological changes.

**Exclusions:**            Attention functions (VV02)  
                                 Consciousness functions (VV00-VV0Z)  
                                 Energy and drive functions (VV00)  
                                 Psychomotor functions (VV00-VV0Z)

**VV02****Attention functions**

Specific mental functions of focusing on an external stimulus or internal experience for the required period of time.

- Exclusions:**
- Consciousness functions (VV00-VV0Z)
  - Energy and drive functions (VV00)
  - Memory functions (VV03)
  - Perceptual functions (VV00-VV0Z)
  - Psychomotor functions (VV00-VV0Z)
  - Sleep functions (VV01)

**VV03****Memory functions**

Specific mental functions of registering and storing information and retrieving it as needed.

- Inclusions:**
- immediate memory
  - recent memory
  - remote memory
  - memory span
  - remembering
- Exclusions:**
- Attention functions (VV02)
  - Calculation functions (VV00-VV0Z)
  - Consciousness functions (VV00-VV0Z)
  - Higher-level cognitive functions (VV00-VV0Z)
  - intellectual functioning (VV00-VV0Z)
  - Mental functions of language (VV00-VV0Z)
  - Orientation functions (VV00-VV0Z)
  - Perceptual functions (VV00-VV0Z)
  - Thought functions (VV00-VV0Z)

**VV04****Emotional functions**

Specific mental functions related to the feeling and affective components of the processes of the mind.

**Inclusions:**

- affect
- sadness
- tension
- lability of emotion
- flattening of affect

**Exclusions:**

- Energy and drive functions (VV00)
- Temperament and personality functions (VV00-VV0Z)

**VV0Y****Other specified mental functions****VV0Z****Mental functions, unspecified**

### Sensory functions and pain

This chapter is about the functions of the senses, seeing, hearing, tasting and so on, as well as the sensation of pain.

**VV10****Seeing and related functions****VV11****Hearing and vestibular functions****VV12****Sensation of pain**

Sensation of unpleasant feeling indicating potential or actual damage to some body structure.

**Inclusions:**

- aching pain
- burning pain
- dull pain
- sensations of generalized or localized pain
- stabbing pain

**VV1Y****Other specified sensory functions and pain****VV1Z****Sensory functions and pain, unspecified**

Voice and speech functions

This chapter is about the functions of producing sounds and speech.

**VV20**

### **Voice functions**

Functions of the production of various sounds by the passage of air through the larynx.

**Exclusions:**            Alternative vocalization functions (VV20-VV2Z)  
                                 Articulation functions (VV20-VV2Z)  
                                 Mental functions of language (VV00-VV0Z)

**VV2Y**

### **Other specified voice and speech functions**

**VV2Z**

### **Voice and speech functions, unspecified**

Functions of the cardiovascular, haematological, immunological and respiratory systems

This chapter is about the functions involved in the cardiovascular system (functions of the heart and blood vessels), the haematological and immunological systems (functions of blood production and immunity), and the respiratory system (functions of respiration and exercise tolerance).

**VV30**

### **Exercise tolerance functions**

Functions related to respiratory and cardiovascular capacity as required for enduring physical exertion.

**Exclusions:**            additional respiratory functions (VV30-VV3Z)  
                                 Functions of the cardiovascular system (VV30-VV3Z)  
                                 Haematological system functions (VV30-VV3Z)  
                                 Respiration functions (VV30-VV3Z)  
                                 Respiratory muscle functions (VV30-VV3Z)

**VV3Y**

### **Other specified functions of the cardiovascular, haematological, immunological and respiratory systems**

**VV3Z**

### **Functions of the cardiovascular, haematological, immunological and respiratory systems, unspecified**

Functions of the digestive, metabolic and endocrine systems

This chapter is about the functions of ingestion, digestion and elimination, as well as functions involved in metabolism and the endocrine glands.

**VV40**

### **Functions related to the digestive system**

**VV4Y**

### **Other specified functions of the digestive, metabolic and endocrine systems**

**VV4Z****Functions of the digestive, metabolic and endocrine systems, unspecified**

Genitourinary and reproductive functions

This chapter is about the functions of urination and the reproductive functions, including sexual and procreative functions.

**VV50****Urination functions**

Functions of discharge of urine from the urinary bladder.

**Exclusions:**           Sensations associated with urinary functions (VV50-VV5Z)  
                                   Urinary excretory functions (VV50-VV5Z)

**VV51****Sexual functions**

Mental and physical functions related to the sexual act, including the arousal, preparatory, orgasmic and resolution stages.

**Exclusions:**           Procreation functions (VV50-VV5Z)  
                                   Sensations associated with genital and reproductive functions (VV50-VV5Z)

**VV5Y****Other specified genitourinary and reproductive functions****VV5Z****Genitourinary and reproductive functions, unspecified**

Neuromusculoskeletal and movement-related functions

This chapter is about the functions of movement and mobility, including functions of joints, bones, reflexes and muscles.

**VV60****Mobility of joint functions**

Functions of the range and ease of movement of a joint.

**Exclusions:**           Control of voluntary movement functions (VV60-VV6Z)  
                                   Stability of joint functions (VV60-VV6Z)

**VV61****Muscle power functions**

Functions related to the force generated by the contraction of a muscle or muscle groups.

**Exclusions:**           Functions of structures adjoining the eye (VV10)  
                                   Muscle endurance functions (VV60-VV6Z)  
                                   Muscle tone functions (VV60-VV6Z)

**VV6Y****Other specified neuromusculoskeletal and movement-related functions****VV6Z****Neuromusculoskeletal and movement-related functions, unspecified**

## Functions of the skin and related structures

This chapter is about the functions of skin, nails and hair.

**VV70**

### **Functions of the skin**

**VV7Y**

### **Other specified functions of the skin and related structures**

**VV7Z**

### **Functions of the skin and related structures, unspecified**

## Learning and applying knowledge

This chapter is about learning, applying the knowledge that is learned, thinking, solving problems, and making decisions.

**VV80**

### **Basic learning**

**VV81**

### **Solving problems**

Finding solutions to questions or situations by identifying and analysing issues, developing options and solutions, evaluating potential effects of solutions, and executing a chosen solution, such as in resolving a dispute between two people.

**Exclusions:** Making decisions (VV80-VV8Z)

Thinking (VV80-VV8Z)

**VV8Y**

### **Other specified learning and applying knowledge**

**VV8Z**

### **Learning and applying knowledge, unspecified**

## General tasks and demands

This chapter is about general aspects of carrying out single or multiple tasks, organizing routines and handling stress. These items can be used in conjunction with more specific tasks or actions to identify the underlying features of the execution of tasks under different circumstances.

**VV90**

### **Carrying out daily routine**

Carrying out simple or complex and coordinated actions in order to plan, manage and complete the requirements of day-to-day procedures or duties, such as budgeting time and making plans for separate activities throughout the day.

**Exclusions:** Undertaking multiple tasks (VV90-VV9Z)

**VV91**

### **Handling stress and other psychological demands**

Carrying out simple or complex and coordinated actions to manage and control the psychological demands required to carry out tasks demanding significant responsibilities and involving stress, distraction, or crises, such as taking exams, driving a vehicle during heavy traffic, finishing a task within a time-limit or taking responsibility for a group of individuals.

**VV9Y**

### **Other specified general tasks and demands**

**VV9Z**

### **General tasks and demands, unspecified**

## Communication

This chapter is about general and specific features of communicating by language, signs and symbols, including receiving and producing messages, carrying on conversations, and using communication devices and techniques.

### **VW00**

#### **Communicating with - receiving - spoken messages**

Comprehending literal and implied meanings of messages in spoken language, such as understanding that a statement asserts a fact or is an idiomatic expression.

### **VW01**

#### **Conversation**

Starting, sustaining and ending an interchange of thoughts and ideas, carried out by means of spoken, written, signed or other forms of language, with one or more people one knows or who are strangers, in formal or casual settings.

### **VW0Y**

#### **Other specified communication**

### **VW0Z**

#### **Communication, unspecified**

## Mobility

This chapter is about moving by changing body position or location or by transferring from one place to another, by carrying, moving or manipulating objects, by walking, running or climbing, and by using various forms of transportation.

### **VW10**

#### **Maintaining a standing position**

Staying in a standing position for some time such as when standing in a queue.

**Inclusions:**

- staying in a standing position on hard surfaces
- staying in a standing position on a slope
- staying in a standing position on slippery surfaces

### **VW11**

#### **Transferring oneself**

Moving from one surface to another, such as sliding along a bench or moving from a bed to a chair, without changing body position.

**Exclusions:** Changing basic body position (VW10-VW1Z)

### **VW12**

#### **Carrying, moving and handling objects**

### **VW13**

#### **Walking**

Moving along a surface on foot, step by step, so that one foot is always on the ground, such as when strolling, sauntering, walking forwards, backwards, or sideways.

**Exclusions:**

- Moving around (VW10-VW1Z)
- Transferring oneself (VW11)

**VW14****Moving around within the home**

Walking and moving around in one's home, within a room, between rooms, and around the whole residence or living area.

**Inclusions:**

- moving from floor to floor
- moving on an attached balcony
- moving in a restricted area such as a courtyard, porch or garden

**VW15****Moving around using equipment**

Moving the whole body from place to place, on any surface or space, by using specific devices designed to facilitate moving or create other ways of moving around, such as with skates, skis, or scuba equipment, or moving down the street in a self-propelled wheelchair or a walker.

**Exclusions:**

- Driving (VW10-VW1Z)
- Moving around (VW10-VW1Z)
- Transferring oneself (VW11)
- Using transportation (VW16)
- Walking (VW13)

**VW16****Using transportation**

Using transportation to move around as a passenger, such as being driven in a car, bus, rickshaw, jitney, pram or stroller, wheelchair, animal-powered vehicle, private or public taxi, train, tram, subway, boat or aircraft and using humans for transportation.

**Exclusions:**

- Driving (VW10-VW1Z)
- Moving around using equipment (VW15)

**VW1Y****Other specified mobility****VW1Z****Mobility, unspecified**

## Self-care

This chapter is about caring for oneself, washing and drying oneself, caring for one's body and body parts, dressing, eating and drinking, and looking after one's health.

**VW20****Washing oneself**

Washing and drying one's whole body, or body parts, using water and appropriate cleaning and drying materials or methods, such as bathing, showering, washing hands and feet, face and hair, and drying with a towel.

**Exclusions:**

- Caring for body parts (VW21)
- Toileting (VW22)

**VW21****Caring for body parts**

Looking after those parts of the body, such as skin, face, teeth, scalp, nails and genitals, that require more than washing and drying.

**Exclusions:** Toileting (VW22)  
Washing oneself (VW20)

**VW22****Toileting**

Planning and carrying out the elimination of human waste (menstruation, urination and defecation), and clean oneself afterwards.

**Exclusions:** Caring for body parts (VW21)  
Dressing (VW23)  
Moving around within the home (VW14)  
Walking (VW13)  
Washing oneself (VW20)

**VW23****Dressing**

Carrying out the coordinated actions and tasks of putting on and taking off clothes and footwear in sequence and in keeping with climatic and social conditions, such as by putting on, adjusting and removing shirts, skirts, blouses, pants, undergarments, saris, kimono, tights, hats, gloves, coats, shoes, boots, sandals and slippers.

**VW24****Eating**

Carrying out the coordinated tasks and actions of eating food that has been served, bringing it to the mouth and consuming it in culturally acceptable ways, cutting or breaking food into pieces, opening containers and packets, using eating implements, having meals, feasting or dining.

**Exclusions:** Drinking (VW20-VW2Z)  
Preparing meals (VW30)

**VW25****Looking after one's health**

Ensuring physical comfort, health and physical and mental well-being, such as by maintaining a balanced diet, and an appropriate level of physical activity, keeping warm or cool, avoiding harms to health, following safe sex practices, such as using condoms, getting immunizations and regular physical examinations.

**VW2Y****Other specified self-care****VW2Z****Self-care, unspecified**

## Domestic life

This chapter is about carrying out domestic and everyday actions and tasks. Areas of domestic life include caring for one's belongings and space, acquiring food, clothing and other necessities, household cleaning and repairing, caring for personal and other household objects, and assisting others.

### VW30

#### Preparing meals

Planning, organizing, cooking and serving simple and complex meals for oneself and others, such as by making a menu, selecting edible food and drink, getting together ingredients for preparing meals, cooking with heat and preparing cold foods and drinks, and serving the food.

**Exclusions:**

- Acquisition of goods and services (VW30-VW3Z)
- Caring for household objects (VW30-VW3Z)
- caring for others (VW32)
- Doing housework (VW31)
- Drinking (VW20-VW2Z)
- Eating (VW24)

### VW31

#### Doing housework

Managing a household by cleaning the house, washing clothes, using household appliances, storing food and disposing of garbage, such as by sweeping, mopping, washing counters, walls and other surfaces; collecting and disposing of household garbage; tidying rooms, closets and drawers; collecting, washing, drying, folding and ironing clothes; cleaning footwear; using brooms, brushes and vacuum cleaners; using washing machines, dryers and irons.

**Exclusions:**

- Acquiring a place to live (VW30-VW3Z)
- Acquisition of goods and services (VW30-VW3Z)
- Caring for household objects (VW30-VW3Z)
- caring for others (VW32)
- Preparing meals (VW30)

### VW32

#### Assisting others

Assisting household members and others with their learning, communicating, self-care, movement, within the house or outside; being concerned about the well-being of household members and others.

**Exclusions:** Remunerative employment (VW50)

### VW3Y

#### Other specified domestic life

### VW3Z

#### Domestic life, unspecified

## Interpersonal interactions and relationships

This chapter is about carrying out the actions and tasks required for basic and complex interactions with people (strangers, friends, relatives, family members and lovers) in a contextually and socially appropriate manner.

### **VW40**

#### **Basic interpersonal interactions**

Interacting with people in a contextually and socially appropriate manner, such as by showing consideration and esteem when appropriate, or responding to the feelings of others.

### **VW41**

#### **Relating with strangers**

Engaging in temporary contacts and links with strangers for specific purposes, such as asking for directions or making a purchase.

Engaging in temporary contacts and links with strangers for specific purposes, such as when asking for information, directions or making a purchase.

### **VW42**

#### **Intimate relationships**

Creating and maintaining close or romantic relationships between individuals, such as husband and wife, lovers or sexual partners.

### **VW4Y**

#### **Other specified interpersonal interactions and relationships**

### **VW4Z**

#### **Interpersonal interactions and relationships, unspecified**

## Major life areas

This chapter is about carrying out the tasks and actions required to engage in education, work and employment and to conduct economic transactions.

### **VW50**

#### **Remunerative employment**

Engaging in all aspects of work, as an occupation, trade, profession or other form of employment, for payment, as an employee, full or part time, or self-employed, such as seeking employment and getting a job, doing the required tasks of the job, attending work on time as required, supervising other workers or being supervised, and performing required tasks alone or in groups.

### **VW5Y**

#### **Other specified major life areas**

### **VW5Z**

#### **Major life areas, unspecified**

## Community, social and civic life

This chapter is about the actions and tasks required to engage in organized social life outside the family, in community, social and civic areas of life.

### **VW60**

#### **Recreation and leisure**

Engaging in any form of play, recreational or leisure pursuit, such as informal or organized play and sports, programmes of physical fitness, relaxation, amusement or diversion, going to art galleries, museums, cinemas or theatres; engaging in crafts or hobbies, reading or singing for enjoyment, playing musical instruments; sightseeings, tourism and travelling for pleasure.

**Exclusions:**

- Political life and citizenship (VW60-VW6Z)
- Religion and spirituality (VW60-VW6Z)
- remunerative and non-remunerative work ( and )  
(VW50-VW5Z)
- Riding animals for transportation (VW10-VW1Z)
- Reading (VV80-VV8Z)
- Singing (VW00-VW0Z)

### **VW61**

#### **Human rights**

Enjoying all nationally and internationally recognized rights that are accorded to people by virtue of their humanity alone, such as human rights as recognized by the United Nations Universal Declaration of Human Rights (1948), the United Nations Convention on the Rights of the Child (1989), the United Nations Standard Rules for the Equalization of Opportunities for Persons with Disabilities (1993), and the United Nations Convention on the Rights of Persons with Disabilities (2006); the right to self-determination or autonomy; and the right to control over one's destiny.

**Exclusions:** Political life and citizenship (VW60-VW6Z)

### **VW6Y**

#### **Other specified community, social and civic life**

### **VW6Z**

#### **Community, social and civic life, unspecified**

---

### **VW8Y**

#### **Other specified generic functioning domains**

### **VW8Z**

#### **Generic functioning domains, unspecified**

# CHAPTER X

---

## Extension Codes

This chapter has 6928 four-character categories.

Code range starts with XS8H

Extension codes should never be used in primary classification coding or tabulation.

- They are provided for use as supplementary or additional codes when desired to identify more detail in statistical categories classified elsewhere.
- Extension codes may be used alone in other contexts.

**Coded Elsewhere:** Extension codes of particular relevance to skin diseases

This chapter contains the following top level blocks:

- Severity Scale Value
- Temporality
- Aetiology
- Topology Scale Value
- Anatomy and topography
- Histopathology
- Dimensions of injury
- Dimensions of external causes
- Consciousness
- Substances
- Diagnosis code descriptors
- Capacity or context
- Health Devices, Equipment and Supplies
- Extension codes of particular relevance to skin diseases

## Severity Scale Value

### Generic Severity Scale Value

**Coded Elsewhere:** Basic 3-Value Severity Scale Value: Mild-Moderate-Severe

Clinical Severity Scale Value: Stage 1-2-3-4

Clinical Severity Scale Value: Stage 1-2-2a-2b-3-4

### Mild Moderate Severe Scale Value

|             |                    |          |
|-------------|--------------------|----------|
| <b>XS8H</b> | <b>None</b>        |          |
| <b>XS5W</b> | <b>Mild</b>        |          |
| <b>XS0T</b> | <b>Moderate</b>    |          |
| <b>XS25</b> | <b>Severe</b>      |          |
| <b>XS2R</b> | <b>Profound</b>    |          |
|             | <b>Inclusions:</b> | Complete |

### Clinical Staging Scale Value

|             |                 |
|-------------|-----------------|
| <b>XS7A</b> | <b>Stage 1</b>  |
| <b>XS5S</b> | <b>Stage 2</b>  |
| <b>XS4D</b> | <b>Stage 2a</b> |

| <b>XS05</b> | <b>B Local Disease</b>               |
| <b>XS0E</b> | Local limited                        |
| <b>XS67</b> | Locally advanced                     |
| <b>XS9S</b> | <b>C Regional disease</b>            |
| <b>XS4Z</b> | <b>D Distant disease</b>             |

#### Tumour spread staging Scale Value

|             |                  |
|-------------|------------------|
| <b>XS76</b> | <b>Stage 0</b>   |
| <b>XS1G</b> | <b>Stage I</b>   |
| <b>XS4P</b> | <b>Stage II</b>  |
| <b>XS6H</b> | <b>Stage III</b> |
| <b>XS9R</b> | <b>Stage IV</b>  |

#### Histological Grading Scale Value

|             |                                              |
|-------------|----------------------------------------------|
| <b>XS56</b> | <b>Grade I</b><br>Well differentiated        |
| <b>XS58</b> | <b>Grade II</b><br>Moderately differentiated |
| <b>XS7Z</b> | <b>Grade III</b><br>Poorly differentiated    |
| <b>XS7M</b> | <b>Grade IV</b><br>Undifferentiated          |

**XS7H**

**Undetermined grade**

Grade cannot be assessed

**NYHA Functional Classification: Class I-IV**

**XS3A**

**NYHA Class I - No limitation of physical activity**

No limitation of physical activity. Ordinary physical activity does not cause undue fatigue, palpitation, dyspnoea (shortness of breath).

**XS6B**

**NYHA Class II - Slight limitation of physical activity**

Slight limitation of physical activity. Comfortable at rest. Ordinary physical activity results in fatigue, palpitation, dyspnoea (shortness of breath).

**XS9T**

**NYHA Class III - Marked limitation of physical activity**

Marked limitation of physical activity. Comfortable at rest. Less than ordinary activity causes fatigue, palpitation or dyspnoea.

**XS9F**

**NYHA Class IV - Unable to carry on any physical activity without discomfort**

Unable to carry on any physical activity without discomfort. Symptoms of heart failure at rest. If any physical activity is undertaken, discomfort increases.

**Chronic Obstructive Lung Disease Criteria: GOLD 1-4**

**XS80**

**GOLD 1 - mild:  $FEV_1 \geq 80\%$  predicted**

**XS7U**

**GOLD 2 - moderate:  $50\% \leq FEV_1 < 80\%$  predicted**

**XS8K**

**GOLD 3 - severe:  $30\% \leq FEV_1 < 50\%$  predicted**

**XS50**

**GOLD 4 - very severe:  $FEV_1 < 30\%$  predicted**

**Peripheral arterial disease (PAD) Severity Classification by Fontaine**

**XS1Y**

**Stage I: Asymptomatic, incomplete blood vessel obstruction**

**XS5L**

**Stage II: Mild claudication pain in limb**

**XS5V**

**Stage IIA: Claudication at a distance > 200 metres**

**XS6C**

**Stage IIB: Claudication at a distance < 200 metres**

**XS9L**

**Stage III: Rest pain, mostly in the feet**

**XS2J**

**Stage IV: Necrosis and/or gangrene of the limb**

**Endometriosis Severity Scale Value**

**XS3V**

**No endometriosis**

|             |                            |
|-------------|----------------------------|
| <b>XS5N</b> | <b>Filmy endometriosis</b> |
| <b>XS55</b> | <b>Dense endometriosis</b> |

#### Vocal Cord Paralysis Severity Scale Value

|             |                                        |
|-------------|----------------------------------------|
| <b>XS1H</b> | <b>Incomplete vocal cord paralysis</b> |
| <b>XS66</b> | <b>Partial vocal cord paralysis</b>    |
| <b>XS7K</b> | <b>Complete vocal cord paralysis</b>   |

#### Sepsis Severity Scale Value

|             |                      |
|-------------|----------------------|
| <b>XS5E</b> | <b>Mild sepsis</b>   |
| <b>XS65</b> | <b>Severe sepsis</b> |
| <b>XS26</b> | <b>Septic shock</b>  |

#### Peripheral arterial disease (PAD) Severity Classification by Rutherford

|             |                                                                                                                                                                                                                                                                                       |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>XS1T</b> | <b>Grade 0 Category 0: Asymptomatic -no hemodynamically significant occlusive disease</b><br>Objective criteria: Normal treadmill or reactive hyperemia test                                                                                                                          |
| <b>XS0Q</b> | <b>Grade 0 Category 1: Mild claudication</b><br>Objective criteria: Completes treadmill exercise; ankle pressure (AP) after exercise > 50 mm Hg but at least 20 mm Hg lower than resting value                                                                                        |
| <b>XS2W</b> | <b>Grade I Category 2: Moderate claudication</b><br>Objective criteria: Between categories 1 and 3                                                                                                                                                                                    |
| <b>XS51</b> | <b>Grade I Category 3: Severe claudication</b><br>Objective criteria: Cannot complete standard treadmill exercise, and ankle pressure (AP) after exercise < 50 mm Hg                                                                                                                  |
| <b>XS8M</b> | <b>Grade II Category 4: Ischaemic rest pain</b><br>Objective criteria: Resting ankle pressure (AP) < 40 mm Hg, flat or barely pulsatile ankle or metatarsal pulse volume recording (PVR); toe pressure (TP) < 30 mm Hg                                                                |
| <b>XS6U</b> | <b>Grade III Category 5: Minor tissue loss - nonhealing ulcer, focal gangrene with diffuse pedal ischaemia</b><br>Objective criteria: Resting ankle pressure (AP) < 60 mm Hg, ankle or metatarsal pulse volume recording (PVR) flat or barely pulsatile; toe pressure (TP) < 40 mm Hg |

**XS0U**

**Grade III Category 6: Major tissue loss - extending above transmetatarsal (TM) level, functional foot no longer salvageable**

Objective criteria: Same as category 5.

## Pain Severity Scale Value

The chronic pain severity scale value is a compound measure comprised of pain intensity, pain-related distress, and pain-related interference. Each of these measures is a patient rating.

### Pain intensity

Pain intensity is defined as the strength of the subjective pain experience ("how much does the pain hurt?"). The patient should be asked to rate the average pain intensity for the last week on an 11-point numerical rating scale (ranging from 0 'no pain' to 10 'worst pain imaginable') or a 100 mm visual rating scale.

**XS5B**

**No pain**

Pain intensity rating NRS: 0

**XS5D**

**Mild pain**

Pain intensity rating NRS: 1-3

**XS9Q**

**Moderate pain**

Pain intensity rating NRS: 4-6

**XS2E**

**Severe pain**

Pain intensity rating NRS: 7-10

### Pain-related distress

Pain-related distress is defined as the multifactorial unpleasant emotional experience of a cognitive, behavioral, emotional, social, or spiritual nature due to the chronic pain ("how distressed are you by the pain?"). The patient should be asked to rate the average pain-related distress they experienced in the last week on an 11-point numerical rating scale (ranging from 0 'no pain-related distress' to 10 'extreme pain-related distress') or a 100mm visual rating scale.

**XS1J**

**No distress**

Pain-related distress rating NRS: 0

**XS3R**

**Mild distress**

Pain-related distress rating NRS: 1-3

**XS7C**

**Moderate distress**

Pain-related distress rating NRS: 4-6

**XS7N**

**Severe distress**

Pain-related distress rating NRS: 7-10

### Pain-related interference

Pain-related interference is a measure for how much the pain interferes with daily activities and participation (“how much does the pain interfere with your life?”). The patient should be asked to rate the average pain-related interference they experienced in the last week on an 11-point numerical rating scale (ranging from 0 ‘no interference’ to 10 ‘unable to carry on activities’) or a 100mm visual rating scale.

**XS71**

#### **No pain-related interference**

Pain-related interference rating NRS: 0

**XS5R**

#### **Mild pain-related interference**

Pain-related interference rating NRS: 1-3

**XS2L**

#### **Moderate pain-related interference**

Pain-related interference rating NRS: 4-6

**XS2U**

#### **Severe pain-related interference**

Pain-related interference rating NRS: 7-10

### Presence of psychosocial factors Scale Value

Use this extension code to code the presence or absence of problematic emotional (e.g., anger, fear), cognitive (e.g., excessive worry, catastrophizing), behavioral (e.g., avoidance) or social factors (eg, work, relationships) that accompany a given health condition (e.g., chronic pain). The code for the presence of psychosocial factors is appropriate when there is positive evidence that psychological or social factors contribute to the cause, the maintenance or the exacerbation of the health condition, or associated disability, or when the health condition results in negative psychobehavioral consequences (eg, demoralisation, hopelessness, avoidance, withdrawal). Assigning this extension code does not require a judgement regarding aetiological contributions or causal priorities.

**XS7G**

#### **Psychosocial factors present**

**XS8B**

#### **No psychosocial factors present**

### Adult Nutritional Status Scale Value

**XS11**

#### **Underweight BMI Below 18.5 kg/m<sup>2</sup>**

**XS43**

#### **Normal weight BMI 18.5–24.9 kg/m<sup>2</sup>**

**XS7R**

#### **Pre-obesity BMI 25.0–29.9 kg/m<sup>2</sup>**

**XS3Y**

#### **Obesity class I BMI 30.0–34.9 kg/m<sup>2</sup>**

**XS6N**

#### **Obesity class II BMI 35.0–39.9 kg/m<sup>2</sup>**

**XS2B**

#### **Obesity class III BMI greater than or equal to 40 kg/m<sup>2</sup>**

## Coronary atherosclerosis Severity Scale Value

|             |                                |
|-------------|--------------------------------|
| <b>XS2V</b> | <b>Single vessel disease</b>   |
| <b>XS8U</b> | <b>Multiple vessel disease</b> |

## Anaphylaxis Severity Scale Value

|             |                                                                                                                                               |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>XS09</b> | <b>Anaphylaxis grade 1</b><br>Anaphylaxis grade 1 is considered when there is a single organ system involved.                                 |
| <b>XS59</b> | <b>Anaphylaxis grade 2</b><br>Anaphylaxis grade 2 is considered in cases of more than one organ system involvement; but not life-threatening. |
| <b>XS2Y</b> | <b>Anaphylaxis grade 3</b><br>Anaphylaxis grade 3 is considered in life-threatening cases with more than one organ system involved.           |
| <b>XS85</b> | <b>Anaphylaxis grade 4</b><br>Anaphylaxis grade 4 is considered in life-threatening cases with cardiac arrest.                                |

**Chronic**

Onset

**XT2Q**

**Early onset**

**XT46**

**Immediate onset**

**XT3R**

**Late onset**

**XT64**

**Delayed onset**

**XT3Z**

**Rapid onset**

Rapid or sudden onset of a condition/illness that requires more immediate and/or aggressive treatment

**XT42**

**Gradual onset**

Time in Life

**XT0S**

**Pregnancy**

For the mother, the period of time between fertilization and parturition.

**XT4Z**

**Postpartum**

**XT1G**

**Puerperium**

For the mother, the period of time that lasts from birth through the 42nd day of life for the child.

**XT77**

**Antenatal - WHO Standard**

For the fetus, the period of time between fertilization and parturition.

**XT5L**

**Antenatal - Aus. Standard**

**XT5P**

**Antenatal - Can. Standard**

**XT04**

**Antenatal - Ger. Standard**

| <b>XT15</b> | <b>Young Adult</b><br>The period of time from the start of the 20th year of life through the end of the 24th.         |
| <b>XT6S</b> | <b>Adult</b><br>The period of time from the start of the 25th year of life through the end of the 64th.               |
| <b>XT19</b> | <b>Early Geriatric</b><br>The period of time from the start of the 65th year of life through the end of the 84th year |

**XT13****Late Geriatric**

The period of time from the start of the 85th year through the end of life.

## Duration of pregnancy

Use as additional code, if desired, for cases of Abortive outcome of pregnancy, Threatened abortion, Fetal death in utero, Premature rupture of membranes (before 37 completed weeks of gestation), False labour before 37 completed weeks of gestation (threatened premature labour) and Preterm labour (early onset of labour).

**XT3X**

**Duration of pregnancy less than 5 completed weeks**

**XT09**

**Duration of pregnancy 5-13 completed weeks**

**XT65**

**Duration of pregnancy 14-19 completed weeks**

**XT5N**

**Duration of pregnancy 20-21 completed weeks**

**XT0T**

**Duration of pregnancy 20-25 completed weeks**

**XT4J**

**Duration of pregnancy 26-33 completed weeks**

**XT84**

**Duration of pregnancy 34-36 completed weeks**

**XT6G**

**Duration of pregnancy more than 36 completed weeks**

**XT6K**

**Unspecified duration of pregnancy**

Duration of pregnancy not specified

| <b>XN22T</b> | <p><b>Reovirus</b></p> <p>Reovirus is a nonenveloped double-stranded RNA virus. This virus was initially not known to be related to any specific disease, and so was named Respiratory Enteric Orphan virus. However, some members of the reovirus family have been shown to cause mild illnesses such as diarrhea.</p> |
| <b>XN6FR</b> | <p><b>Retrovirus</b></p> <p>This is an RNA virus that replicates in a host cell. First it uses its own reverse transcriptase enzyme to produce DNA from its RNA genome, reverse of the usual pattern, thus retro (backwards).</p>                                                                                       |

## Endocrine system

**Coded Elsewhere:** Ovary (XA1QK0)

Testis (XA4947)

**XA1CN1**      **Hypothalamus**

**XA1EU3**      **Pineal gland**

**XA8J35**      **Pituitary gland**

**Coded Elsewhere:** Pituitary fossa (XA9N34)

**XA9787**      **Rathke pouch**

**XA5309** Craniopharyngeal duct  
Craniopharyngeal duct is a bony channel that connects the floor of the sella turcica, along the midline, to the nasopharynx.

**XA8RK3** **Thyroid gland**

**Coded Elsewhere:** Thyroglossal duct (XA0SH3)

**XA8LV3** **Left lobe of thyroid gland**

**XA9L72** **Right lobe of thyroid gland**

**XA4NE5** **Isthmus of thyroid gland**

**XA5109** **Pyramidal lobe of thyroid gland**

**XA1342** **Parathyroid gland**

**XA45E6** **Pancreatic islets**

**XA0NE9** **Adrenal gland**

**Coded Elsewhere:** Adrenal vein (XA6TQ3)  
Inferior adrenal artery (XA9QC3)

**XA8956** **Adrenal cortex**

**XA6SS0** **Adrenal medulla**

## Nervous system

**XA3JU6** **Central nervous system**

**XA0AK4** **Meninges**

**XA6HA2** Cerebral meninges

**XA9M51** Cranial dura mater

**XA6WL2** Cranial arachnoid

**XA2T81** Cranial pia mater

**XA7N98** Tentorium cerebelli

**XA09H1** Falx without further specification

**XA1FV7** Falx cerebri

**XA33G9** Falx cerebelli

**XA5AH0** Spinal meninges

**XA8R98** Spinal dura mater

**XA0382** Spinal arachnoid

## Nerve

**Coded Elsewhere:** Peripheral nerve (XA06U6)

- Accessory obturator nerve (XA55J8)
- Auricular branch of vagus nerve (XA0P44)
- Anococcygeal nerve (XA9JU0)
- Ansa cervicalis (XA2M04)
- Anterior interosseous nerve (XA6RQ4)
- Anterior superior alveolar nerve (XA6PJ8)
- Aortic plexus (XA3XN8)
- Auerbach plexus (XA2G56)
- Auriculotemporal nerve (XA5DA8)
- Axillary nerve (XA1ZC4)
- Buccal nerve (XA7UK9)
- Bulbar nuclei (XA54B9)
- Cardiac plexus (XA9QM5)
- Cauda equina (XA84W1)
- Cavernous plexus (XA3FS7)
- Celiac ganglion (XA89R1)
- Chorda tympani (XA2BL2)
- Ciliary ganglion (XA1SG6)
- Coccygeal nerve (XA5C62)
- Cochlear nerve (XA1QU6)
- Common palmar digital nerves of median nerve (XA1LW6)
- Common fibular nerve (XA7HH4)
- Conus medullaris (XA2FQ1)
- Cranial Nerve (XA8EK9)
- Deep branch of the radial nerve (XA5179)
- Deep fibular nerve (XA3QB5)
- Deep petrosal nerve (XA9CT5)
- Deep temporal nerve (XA52H1)
- Diagonal band of Broca (XA8QL3)
- Digital nerve (XA37M8)
- Dorsal branch of ulnar nerve (XA1TY7)
- Dorsal nerve of clitoris (XA76C3)
- Dorsal nerve of the penis (XA8CC3)
- Dorsal scapular nerve (XA9RP3)
- Oesophageal plexus (XA7K49)
- Ethmoidal nerve (XA5BP8)
- External laryngeal nerve (XA9LP4)
- Femoral nerve (XA11D4)

Frontal nerve (XA7F46)  
 Gastric plexus (XA2Y82)  
 Geniculate ganglion (XA66H0)  
 Genital branch of genitofemoral nerve (XA99Q6)  
 Genitofemoral nerve (XA9JZ4)  
 Gluteal nerve (XA60R4)  
 Greater auricular nerve (XA4WK4)  
 Greater occipital nerve (XA6BB0)  
 Greater petrosal nerve (XA4W18)  
 Hepatic plexus (XA4YZ0)  
 Iliohypogastric nerve (XA8T30)  
 Ilioinguinal nerve (XA5Q50)  
 Inferior alveolar nerve (XA3VT0)  
 Inferior anal nerves (XA8CZ0)  
 Inferior cardiac nerve (XA9TB4)  
 Inferior cervical ganglion (XA20S2)  
 Inferior gluteal nerve (XA1GU3)  
 Inferior hypogastric plexus (XA05T1)  
 Inferior mesenteric plexus (XA8QG3)  
 Inferior palpebral nerve (XA4E11)  
 Infraorbital nerve (XA3G43)  
 Intercostal nerve (XA5HJ3)  
 Intercostobrachial nerve (XA2F71)  
 Intermediate cutaneous nerve (XA6B81)  
 Internal carotid plexus (XA5JN1)  
 Internal laryngeal nerve (XA6UK8)  
 Jugular ganglion (XA8AU6)  
 Lacrimal nerve (XA16M4)  
 Lateral cord of brachial plexus (XA9PG2)  
 Lateral cutaneous nerve of forearm (XA6166)  
 Lateral femoral cutaneous nerve (XA4834)  
 Lateral pectoral nerve (XA5A06)  
 Lateral plantar nerve (XA9958)  
 Lateral pterygoid nerve (XA3114)  
 Left recurrent laryngeal nerve (XA3524)  
 Lesser occipital nerve (XA3ND8)  
 Lingual nerve (XA5CT7)  
 Long ciliary nerves (XA3VY1)  
 Long root of the ciliary ganglion (XA1Z01)  
 Long thoracic nerve (XA0A05)

Lower subscapular nerve (XA9XA5)  
 Lumbar nerve (XA5UE9)  
 Lumbar splanchnic nerve (XA8U35)  
 Lumboinguinal nerve (XA8307)  
 Lumbosacral trunk (XA76D3)  
 Trigeminal nerve, mandibular branch (XA1F17)  
 Masseteric nerve (XA5NQ5)  
 Trigeminal nerve, maxillary branch (XA8KJ5)  
 Medial cord of brachial plexus (XA7UA9)  
 Medial cutaneous nerve of arm (XA7K97)  
 Medial cutaneous nerve of forearm (XA26F7)  
 Medial cutaneous nerve (XA9HJ5)  
 Medial pectoral nerve (XA49V5)  
 Medial plantar nerve (XA9AF5)  
 Medial pterygoid nerve (XA1RH8)  
 Meissner plexus (XA8Z10)  
 Mental nerve (XA6ZD8)  
 Middle cardiac nerve (XA8ML2)  
 Middle cervical ganglion (XA9RD0)  
 Middle meningeal nerve (XA9G70)  
 Muscular branches of the radial nerve (XA3P46)  
 Musculocutaneous nerve (XA5QF4)  
 Mylohyoid nerve (XA9FV5)  
 Nasociliary nerve (XA5WM9)  
 Nasopalatine nerve (XA0S35)  
 Nerve of pterygoid canal (XA9LR9)  
 Nerve of the cervical region (XA96Q6)  
 Spinal nerve plexus (XA64F0)  
 Spinal nerve root (XA6EC2)  
 Nerve to obturator internus (XA1HC7)  
 Nerve to quadratus femoris (XA7S27)  
 Nerve to the piriformis (XA8PE3)  
 Nerve to the stapedius (XA69Y7)  
 Nerve to the subclavius (XA4XD7)  
 Nervus intermedius (XA0869)  
 Nervus spinosus (XA2KG8)  
 Nodose ganglion (XA5NY4)  
 Obturator nerve (XA4548)  
 Trigeminal nerve, ophthalmic branch (XA95Y8)  
 Otic ganglion (XA2260)

Ovarian plexus (XA9PB2)  
 Palatine nerve (XA7P00)  
 Palmar branch of the median nerve (XA89K2)  
 Palmar branch of ulnar nerve (XA7FU0)  
 Pancreatic plexus (XA0C44)  
 Paraganglion (XA9519)  
 Patellar plexus (XA5186)  
 Pelvic splanchnic nerve (XA1GM8)  
 Perforating cutaneous nerve (XA6GZ8)  
 Perineal branches of posterior femoral cutaneous nerve (XA4A74)  
 Perineal nerve (XA0W10)  
 Petrous ganglion (XA48Z8)  
 Pharyngeal nerve (XA5Q86)  
 Phrenic nerve (XA9ZM0)  
 Phrenic plexus (XA9ME3)  
 Plantar nerve (XA3906)  
 Posterior auricular nerve (XA7F87)  
 Posterior branch of spinal nerve (XA11K1)  
 Posterior cord of brachial plexus (XA1UT5)  
 Posterior cutaneous nerve of arm (XA2XU7)  
 Posterior cutaneous nerve of forearm (XA0KL7)  
 Posterior cutaneous nerve of thigh (XA83P9)  
 Posterior scrotal nerve (XA7NU3)  
 Posterior superior alveolar nerve (XA9AN9)  
 Proper palmar digital nerves of median nerve (XA7ZD7)  
 Prostatic plexus (XA16Y3)  
 Pterygopalatine ganglion (XA0ER1)  
 Pudendal nerve (XA6WU3)  
 Pudendal plexus (XA9411)  
 Renal plexus (XA82M9)  
 Right recurrent laryngeal nerve (XA1BR5)  
 Sacral splanchnic nerves (XA0SA1)  
 Saphenous nerve (XA9EW1)  
 Sciatic nerve (XA9KK8)  
 Semilunar ganglion (XA1SM8)  
 Short ciliary nerves (XA07F8)  
 Sphenopalatine nerves (XA3W58)  
 Spinal nerve (XA65L3)  
 Splenic plexus (XA4V38)  
 Subcostal nerve (XA3RU6)

Submandibular ganglion (XA74N6)  
 Suboccipital nerve (XA0Z50)  
 Superficial branch of the radial nerve (XA2E94)  
 Superficial fibular nerve (XA2125)  
 Superior cardiac nerve (XA1AC5)  
 Superior cervical ganglion (XA6BG1)  
 Superior ganglion (XA6YL5)  
 Superior gluteal nerve (XA9AC5)  
 Superior hypogastric plexus (XA33C1)  
 Superior labial nerve (XA6AE9)  
 Superior laryngeal nerve (XA2HA5)  
 Superior lateral cutaneous nerve of arm (XA6B07)  
 Superior mesenteric plexus (XA3DJ3)  
 Superior rectal plexus (XA4G22)  
 Supraclavicular nerves (XA5318)  
 Suprarenal plexus (XA6MY2)  
 Suprascapular nerve (XA8QY6)  
 Supratrochlear nerve (XA95V8)  
 Sural nerve (XA4HR8)  
 Sympathetic trunk (XA6W14)  
 Third occipital nerve (XA18D0)  
 Thoracic splanchnic nerve (XA2R06)  
 Thoraco-abdominal nerve (XA0462)  
 Thoracodorsal nerve (XA2542)  
 Tibial nerve (XA7534)  
 Transverse cervical nerve (XA25F4)  
 Tympanic nerve (XA4Q30)  
 Upper subscapular nerve (XA5KR0)  
 Vestibular nerve (XA1AL7)  
 Zygomatic nerve (XA4DJ9)  
 Zygomaticofacial nerve (XA62X3)  
 Zygomaticotemporal nerve (XA9MM8)

| <b>XA2N78</b> | <p>Diagonal branches of left anterior descending coronary artery</p> <p>Diagonal branches of the left anterior descending coronary artery supply blood flow to the anterior and anterolateral walls of the left ventricle. There are usually denoted as D1, D2, D3, etc.</p> <p>There are termed "diagonal" due to them branching from their parent vessel at acute angles. They extend over the left ventricle in a diagonal fashion toward the acute margin and the cardiac apex. They often run parallel to one another and are variable in number (often 2 to 9).</p> |

## Adenomas and adenocarcinomas, uncertain whether benign or malignant

**Coded Elsewhere:** ACTH-producing tumour (XH7AG8)

Enteroglucagonoma (XH2PF0)

L-cell tumour (XH7LW9)

Pancreatic peptide and pancreatic peptide-like peptide within terminal tyrosine amide producing tumour (XH9ZS8)

Glucagonoma (XH4NQ8)

Gastrinoma (XH93H8)

Vipoma (XH72E5)

Somatostatinoma (XH5VH0)

Endocrine tumour, functioning, NOS (XH41P2)

Glucagon-like peptide-producing tumour (XH7152)

**XH6770**

**Apudoma**

**XH6VL9**

**Atypical adenoma**

**Inclusions:** Bronchial adenoma, NOS

**XH3T38**

**Atypical follicular adenoma**

**XH0S86**

**Clear cell adenofibroma of borderline malignancy**

**Inclusions:** Clear cell cystadenofibroma of borderline malignancy

**XH5DQ2**

**Endometrioid adenoma, borderline malignancy**

**Inclusions:** Endometrioid cystadenoma, borderline malignancy

Endometrioid tumour, borderline

**XH76W6**

**Multiple endocrine adenomas**

**Inclusions:** Endocrine adenomatosis

**XH8468**

**Pulmonary adenomatosis**

**XH54H3**

**Hypernephroid tumour**

**XH7PR9**

**Multilocular cystic renal neoplasm of low malignant potential**

**XH9DS4**

**Endometrioid adenofibroma, borderline malignancy**

**Inclusions:** Endometrioid cystadenofibroma, borderline malignancy

**XH4JG0**

**Tubular carcinoid**

**XH4XL2**

**Aggressive papillary tumour**

**XH9PN4**

**Well differentiated tumor of uncertain malignant potential**

**XH6SY0**

**Non-invasive follicular thyroid neoplasm with papillary-like nuclear features (NIFTP)**

**XH1Y66**

**Hyalinizing trabecular tumour**

Miscellaneous bone tumours, malignant

**XH8F52**      **Adamantinoma of long bones**

*Inclusions:*      Tibial adamantinoma

Miscellaneous tumours

Miscellaneous tumours, benign

**XH6C72**      **Melanotic neuroectodermal tumour**

*Inclusions:*      Melanotic progonoma  
                            Melanoameloblastoma

**XH7MT7**      **Benign notochordal cell tumour**

**XH0S20**      **Parachordoma**

Miscellaneous tumours, malignant

**XH2S71**      **Mixed pineal tumour**

*Inclusions:*      Mixed pineocytoma-pineoblastoma

**XH1S48**      **Pineal parenchymal tumour of intermediate differentiation**

**XH1ZH1**      **Pineoblastoma**

Pineoblastomas are a rare, malignant type of supratentorial primitive neuroectodermal tumour, found mainly in children (less than 10% of cases are reported in adults), located in the pineal region of the brain but that can metastasize along the neuroaxis. As they are the most aggressive of the pineal parenchymal tumours, they are usually associated with a poor prognosis.

**XH3D20**      **Transitional pineal tumour**
